Reports of General MacArthur

JAPANESE OPERATIONS IN THE SOUTHWEST PACIFIC AREA

VOLUME II—PART I

COMPILED FROM
JAPANESE DEMOBILIZATION BUREAUX RECORDS

Library of Congress Catalog Card Number: 66–60007

Facsimile Reprint, 1994

CMH Pub 13–1

FOREWORD

The *Reports of General MacArthur* include two volumes being published by the Department of the Army in four books reproduced exactly as they were printed by General MacArthur's Tokyo headquarters in 1950, except for the addition of this foreword and indexes. Since they were Government property, the general turned over to the Department in 1953 these volumes and related source materials. In Army and National Archives custody these materials have been available for research although they have not been easily accessible. While he lived, General MacArthur was unwilling to approve the reproduction and dissemination of the *Reports,* because he believed they needed further editing and correction of some inaccuracies. His passing permits publication but not the correction he deemed desirable. In publishing them, the Department of the Army must therefore disclaim any responsibility for their accuracy. But the Army also recognizes that these volumes have substantial and enduring value, and it believes the American people are entitled to have them made widely available through government publication.

The preliminary work for compiling the MacArthur volumes began in 1943 within the G–3 Section of his General Staff, and was carried forward after the war by members of the G–2 Section, headed by Maj. Gen. Charles A. Willoughby with Professor Gordon W. Prange, on leave from the University of Maryland, as his principal professional assistant. Volume II of the *Reports* represents the contributions of Japanese officers employed to tell their story of operations against MacArthur's forces. The very large number of individuals, American and Japanese, who participated in the compilation and editing of the *Reports* would make a complete listing of contributors relatively meaningless.

Volume I narrates the operations of forces under General MacArthur's command from the Japanese attack on Luzon in 1941 through the surrender in 1945. While service histories have covered much of the same ground in separate volumes, no single detailed narrative of General MacArthur's leadership as commander of the Southwest Pacific Area has yet appeared. Chapters dealing with the reconquest of Borneo, plans for the invasion of Japan, and the Japanese surrender make a distinctly new contribution. Volume I Supplement describes the military phase of the occupation through December 1948, reporting events not treated elsewhere in American publications. Volume II on Japanese operations brings together a mass of information on the enemy now only partially available in many separate works. Collectively, the *Reports* should be of wide interest and value to the American people generally, as well as to students of military affairs. They are an illuminating record of momentous events influenced in large measure by a distinguished American soldier.

Washington, D.C.
January 1966

HAROLD K. JOHNSON
General, United States Army
Chief of Staff

FOREWORD TO THE 1994 EDITION

I determined for several reasons to republish General MacArthur's reports to commemorate the fiftieth anniversary of World War II. First, the *Reports of General MacArthur* still stand as a detailed account from MacArthur's perspective of his operations against the Japanese in the Southwest Pacific Area. Second, the *Reports* offer a unique Japanese version of their operations in the Southwest Pacific that remains one of the few English-language descriptions of Imperial Army campaigns during World War II. Third, excellent illustrations, many of them original artwork commissioned for the *Reports*, plus superb maps give these volumes an enduring value for military historians and the American public. Finally, while General MacArthur remains a towering figure in American historiography, the passage of fifty years has dimmed the contributions of the U.S. Army units that first checked the Japanese southward advance in Papua New Guinea, then spearheaded the counteroffensive along the north New Guinea coastline that enabled MacArthur to make good his promise to return to the Philippines. The veterans of these campaigns, both men and women, deserve to be remembered for their contributions to the Nation in its time of greatest peril. These are General MacArthur's *Reports*, but they are also his testament to the American soldiers who served under his command.

Washington, D.C.
31 January 1994

HAROLD W. NELSON
Brigadier General, USA
Chief of Military History

PREFACE

This volume parallels the record of Allied operations in the SWPA from the Defense of Luzon, 8 December 1941, to the Surrender Negotiations in Manila, 15 August 1945. It is the Japanese official record, contained in operational monographs furnished by the Japanese Demobilization Bureaux, the successors to the former War and Navy Ministries, developed by Officers of the Japanese Imperial Headquarters, Tokyo, and on the Staffs of major Japanese Commanders in the field. Like Volume I, the material is thus presented by eye witnesses to events, and is supported by official documentary evidence.

It is a record of bitter resistance and tenacious fighting by a first-class Army and Navy, led by Diplomats and Military Politicians through the holocaust of national destruction, an Army that was steeped in medieval cruelty, but fought with the most modern technical skill and savage valor, until superior skill and equal valor broke the spell of the Samurai and the legend of an invincible Empire.

DOUGLAS MACARTHUR

TABLE OF CONTENTS—PART I

IMPERIAL RESCRIPT

We, by grace of heaven, Emperor of Japan, seated on the Throne of a line unbroken for ages eternal, enjoin upon ye, Our loyal and brave subjects:

We hereby declare war on the United States of America and the British Empire. The men and officers of Our army and navy shall do their utmost in prosecuting the war, Our public servants of various departments shall perform faithfully and diligently their appointed tasks, and all other subjects of Ours shall pursue their respective duties; the entire nation with a united will shall mobilize their total strength so that nothing will miscarry in the attainment of our war aims.

To insure the stability of East Asia and to contribute to world peace is the far-sighted policy which was formulated by Our Great Illustrious Imperial Grandsire and our Great Imperial Sire succeeding Him, and which We lay constantly to heart. To cultivate friendship among nation and to enjoy prosperity in common with all nations has always been the guiding principle of Our Empire's foreign policy. It has been truly unavoidable and far from Our wishes that Our Empire has now been brought to cross swords with America and Britain. More than four years have passed since China, failing to comprehend the true intentions of Our Empire, and recklessly courting trouble, disturbed the peace of East Asia and compelled Our Empire to take up arms. Although there has been re-established the National Government of China, with which Japan has effected neighbourly intercourse and co-operation, the regime which has survived at Chungking, relying upon American and British protection, still continues its fratricidal opposition. Eager for the realization of their inordinate ambition to dominate the Orient, both America and Britain, giving support to the Chungking regime in the name of peace, have aggravated the disturbances in East Asia. Moreover, these two Powers, inducing other countries to follow suit, increased military preparations on all sides of Our Empire to challenge us. They have obstructed by every means our peaceful commerce, and finally resorted to a direct severance of economic relations, menacing gravely the existence of Our Empire. Patiently have We waited and long have We endured, in the hope that Our Government might retrieve the situation in peace. But our adversaries, showing not the least spirit of conciliation, have unduly delayed a settlement; and in the meantime, they have intensified economic and military pressure to compel thereby Our Empire to submission. This trend of affairs would, if left unchecked, not only nullify Our Empire's efforts of many years for the sake of the stabilization of East Asia, but also endanger the very existence of Our nation. The situation being such as it is, Our Empire for its existence and self-defense has no other recourse but to appeal to arms and to crush every obstacle in its path.

The hallowed spirits of Our Imperial Ancestors guarding Us from above, We rely upon the loyalty and courage of Our subjects in Our confident expectation that the task bequeathed by Our Forefathers will be carried forward, and that the sources of evil will be speedily eradicated and an enduring peace immutably established in East Asia, preserving thereby the glory of Our Empire.

CHAPTER I

PRE-WAR JAPANESE MILITARY PREPARATIONS 1941

Summary

By 5 November 1941 the Imperial Japanese Government had positively committed itself to taking up arms against the United States, Great Britain, and the Netherlands if, by the first part of December, no diplomatic solution of the Pacific crisis appeared attainable.[1] This formal decision was made at the Imperial conference of 5 November, 17 days after the formation of the Tojo Cabinet.[2]

At this date Japan's military preparations for war were already far advanced. The Imperial conference of 6 September, in view of the unpromising outlook of negotiations with the United States, had decided that such preparations be rushed to completion by the end of October. Under that decision steps were taken to mobilize shipping for Army and Navy use, and the Army began assembling its invasion forces in Japan Proper, Formosa, and South China.[3]

The idea of a surprise attack on Pearl Harbor in the event of war was initially conceived by Admiral Isoroku Yamamoto, Commander-in-Chief of the Combined Fleet, in January 1941.[4] From June of the same year, as Navy leaders became more convinced that their strategy must be based on the hypothesis of fighting the United States and Britain simultaneously, Admiral Yamamoto actively pressed his plan against the opposition of some members of the Navy General Staff, and it was finally accepted in principle on 20 October.[5]

At the annual Navy war-games, held in Tokyo from 10 to 13 September, the general problem under study was fleet operations to establish Japanese control of the Western Pacific, assuming the United States, Britain, and the Netherlands as enemies. The war-games were conducted on the hypothesis of a sortie by the main body of the American fleet into the Western Pacific to block Japanese invasion operations against the Philippines, Malaya, and the Dutch East Indies. However, a special, restricted group of high-ranking staff officers simultaneously studied problems involved in a surprise task force strike at Pearl Harbor.[6]

1 Basic material for this chapter and Chapter II is contained in Research Report No. 131, *Japan's Decision to Fight*, 1 Dec 45, published by ATIS (Allied Translator and Interpreter Service), an operating agency of G-2 GHQ SWPA, handling the translation and dissemination of captured enemy documents and the interrogation of prisoners of war. This material has been revised in the light of additional research and Japanese source documents not previously available. All source materials cited in this chapter are located in G–2 Historical Section Files, GHQ FEC.

2 Imperial Conference decisions leading up to the final declaration of war are covered in detail in Chapter III.

3 Cf. Chapter III.

4 ATIS Research Report No. 131, op. cit., p. 66.

5 Cf. n. 2, Chapter V. The final detailed plan of the Pearl Harbor attack was approved by Admiral Osami Nagano, Chief of Navy General Staff, Imperial General Headquarters, Navy Section, on 3 November, two days before the issue of Combined Fleet Top Secret Operations Order No. 1 laying down the general outline of fleet operations.

6 *Showa Juroku Nen no Nihon Kaigun Zujo Enshu no Sogo Hokoku* 昭和十六年の日本海軍圖上演習の綜合報告 (Summary Report on Japanese Naval War Games, September 1941). Compiled by Rear Adm. Sadatoshi Tomioka, Chief, First Bureau (Operations), Imperial General Headquarters, Navy Section.

By 3 November the basic plan for all naval operations attendant upon the commencement of hostilities had been agreed upon and was embodied in Combined Fleet Top Secret Operations Order No. 1, issued on 5 November. Two days later Combined Fleet Top Secret Operations Order No. 2 designated 8 December[7] as the approximate date of the opening of hostilities (Y-Day), and units of the Pearl Harbor Task Force were simultaneously ordered to assemble in Tankan Bay by 22 November. The definitive date for the start of war (X-Day) was not fixed until 2 December, when the Task Force was already well on its way to Hawaii. A Combined Fleet order issued at approximately 5:30 p.m. on that date designated 8 December as X-Day.[8]

Final Army preparations were also completed during November. Imperial General Headquarters on 6 November established the order of battle of the Southern Army under over-all command of General Hisaichi Terauchi, and on 15 November designated the Philippines, British Malaya, the Dutch East Indies, and part of Southern Burma as the areas to be occupied. Invasion assignments were made to the various forces under Southern Army command on 20 November.[9]

Army and Navy operational plans were coordinated through an Army-Navy Central Agreement concluded in Tokyo on 10 November between General Terauchi, Commander-in-Chief of the Southern Army, and Admiral Yamamoto, Commander-in-Chief of the Combined Fleet. This basic document, which defined the relative commands, spheres of jurisdiction, missions, and responsibilities of the two services in all areas where joint operations were envisaged, was supplemented by detailed operational agreements concluded in mid-November between the Fleet and Army commanders assigned to each area.

The Japanese military authorities were both far-sighted and thorough in certain of their preparations for the war. Selected units were given specialized training in jungle warfare and amphibious operations; secret agents were dispatched to future zones of operation for purposes of espionage and reconnaissance; maps of crucial areas were prepared far in advance; morale and training literature was written and distributed to units; special striking forces were organized, equipped with tropical issue, and staged to carefully selected assembly areas where a maximum of security was assured; and the necessary transport and convoy facilities were arranged in advance.

Official unit reports refer to the periods 27 July–7 December 1941, 12 October–14 November 1941, and 10 October–8 December 1941 as having been devoted to preparation for the Philippine and Malayan Operations. Units receiving this training were currently in Manchuria, the vicinity of Shanghai, and at Palau.

By 10 November 1941, copies of a pamphlet entitled, "Read This and the War is Won", had been received by 55th Division Infantry Group.[10] The text was clearly premonitory of the imminence of war with the

9 For details of Army orders covering the Southern operations, consult Chapter V.

10 Textual extracts from *Kore Sae Yomeba Kateru* これさへ讀めば勝てる (Read This and the War is Won) are given later in this chapter.

United States, Great Britain, and the Netherlands. Copies of this were issued to each Japanese soldier before embarkation for overseas.

The significantly named South Seas Detachment was already organized, on paper at least, by 15 November 1941. It comprised the force which took Guam on 10 December and later moved on to Rabaul and New Guinea.[11]

On 15 November, the Commanding General of the South Seas Detachment, Maj. Gen. Tomitaro Horii, issued a "Message to Warriors in the South Seas," addressed to all personnel serving under his command. This message forecasted with great explicitness the coming of war. No date of outbreak was mentioned, but the tenor of the communication was that of a commander to his troops on the eve of battle.

Certain elements of the newly formed South Seas Detachment were being routed to a staging area in Japan as early as 14 November 1941. A part of the 47th Antiaircraft Battalion, for example, left its station in Manchuria and was transported to the port of Sakaide in Northern Shikoku, via Pusan and Ujina. A major portion of the South Seas Detachment appears to have rendezvoused there. On 22, 23, and 24 November, various units embarked and departed for the Ogasawara (Bonin) Islands. The transports arrived at their destination on 27 November 1941, some touching briefly at Chichi-Jima en route to Haha-Jima. At Haha-Jima the troops rested and trained. On 4 December, the convoy sailed to carry out the attack on Guam.

On 29 November 1941, at 1500 hours, 1st Lt. Sakigawa, Commanding Officer of 2nd Company, 55th Transport Regiment, issued Saki Operation Order No. 2. This read in part, "The Detachment will attack Guam Island."

The mounting of the attack on British Malaya has been partially reconstructed from official documents and diaries deriving from the 41st Infantry Regiment, 106th Land Duty Company, Sasebo 5th Special Naval Landing Party, and 77th Air Regiment, elements of all of which participated in the operation.

On 17 November 1941, 41st Infantry Regiment, which had been stationed in the vicinity of Shanghai since at least early October, training for the Malayan Operations, held a review and ceremony in honor of their "departure for the field". On 18 November, elements of the regiment left Shanghai on the *Ryujo Maru* for the assembly point at Samah, on the southern shore of Hainan Island. The diary of one member contained the following entry under date of 18 November: "....orders have finally arrived. The time has finally come for us to display activity. Are we going to be at war with A, B and D?" On 21 November the *Ryujo Maru* was anchored at Takao. Its date of arrival at Samah is not known, but other elements of the regiment had reached Haikow in Northern Hainan by 20 November. On the same date further elements of the regiment embarked on the *Aobayama Maru* and on 21–22 November sailed from Woosung for Samah. Part of the 106th Land Duty Company left Saigon on the *Tokokawa Maru* on 23 November and arrived at Samah on 25 November. On 25 November also, elements of Sasebo 5th Special Naval Landing Party, while en route to Palau, were ordered to change course and head for Samah. A second section of the 106th Land Duty Company embarked on the *Taikai Maru* at Saigon on 27 November

11 The mission assigned to the South Seas Detachment in the first phase of operations was to capture Guam and Rabaul. Its dispatch to New Guinea in July 1942 for the abortive Japanese drive on Port Moresby was not decided until January 1942. *Nanto Homen Sakusen Kiroku Sono Ichi Nankai Shitai no Sakusen* 南東方面作戦記録其の一南海支隊の作戦 (Southeast Area Operations Record Part I: South Seas Detachment Operations) 1st Demobilization Bureau, Sep 46, pp. 4, 22.

and arrived at Hainan on 1 December. On 3 December, the 2d Squadron of the 77th Air Regiment was ordered to co-operate with the 70th Airfield Company in the air defense of Samah. By 4 December, the assembly was complete. On 4 December, the advance landing forces sailed in convoy for Malaya.

Preparations for the eventual conquest of the Philippines date farther back. There is evidence of extensive pre-war aerial reconnaissance of northern Luzon during the period 27 November to 15 December 1940.[12] (Plate No. 2 shows the photographic coverage obtained and the dates on which the flights were carried out.)

Other evidence indicates that the training of units earmarked for participation in the Philippines campaign was probably under way by early fall of 1941. An extract from Fourth Air Army Ordnance Order No. 12, dated 26 March 1944, reads:

> *Death certificate and service record of Sergeant Takeo Goto:*
>
> *Unit: 25th Water Purification Unit.*
>
> *Year of conscription: 1939*
>
> *Service: 27 July 1941 to 7 December 1941, Manchurian Border Defense and preparation for the Philippines operations.*[13]

The main lines of the operational plan for the Philippines invasion were worked out at the joint Army-Navy staff conference held at Iwakuni, on the Inland Sea, from 14 to 16 November. Orders were issued on 20 November to Fourteenth Army units in Formosa directing them to concentrate at the assembly points in readiness for embarkation.[14]

The Tanaka Detachment, one of the advance forces which landed at Aparri and Vigan, on northern Luzon, embarked at Takao between 23 and 25 November and moved to the naval port of Mako, in the Pescadores, which had been fixed as the starting point of the advance invasion convoy. This force and the Kanno Detachment (Vigan landing) remained at Mako until 1700 on 7 December, when the convoy sailed for northern Luzon.[15]

On 16 November and 26 November respectively, the commanders of the heavy cruiser *Kako* and the light cruiser *Katori* addressed their crews in terms clearly indicative of the imminence of war. On the latter date also, Vice Adm. Chuichi Nagumo informed some of the personnel of the task force assembled at Tankan Bay that they were to attack Pearl Harbor.

Various individuals displayed advance knowledge or suspicion of the imminence of war. It is not certain in some cases whether this was based on information derived from reliable official sources or from rumor and popular gossip. Nevertheless, as early as October 1941, the rumor was current on Truk that war would break out with the United States between 25 December 1941 and 1 February 1942. On 18 November, a member of the 41st Infantry Regiment commented on the probable imminence of war with "A, B and D." On 26 November, a member of the 144th Infantry Regiment, South Seas Detachment, wrote, "Our battle zone will be Guam Island." Two other members of the South Seas Detachment displayed similar knowledge of impending hostilities on 29 November.

Between 2–7 December knowledge of the scheduled outbreak of hostilities on 8 December became quite general among members of stri-

PLATE NO. 2

Japanese Aerial Photo Coverage, Northern Luzon

king forces. On 2 December the captain of the aircraft carrier *Kaga* announced to the crew that war would commence on 8 December. On 4 December Maj. Gen. Horii, Commanding General of the South Seas Detachment, issued a formal statement to the effect that Imperial Japan had, on 2 December 1941, decided to declare war on the United States, Great Britain, and the Netherlands. Thereafter knowledge of their objective appears to have been widespread among members of the South Seas Detachment. Evidence of similarly widespread knowledge among the forces assembled at Samah for the Malayan Operation is more scanty, but there appears to have been some awareness of their goal.

On 1 and 3 December orders for the air defense of Keelung and Samah respectively were issued by the 48th Field Antiaircraft Battalion and 77th Air Regiment. These clearly anticipated the possibility of enemy air attacks.

The evidence upon which the foregoing summary is based is further amplified in the following paragraphs. References have been arranged chronologically in accordance with the date of the most significant entry contained in the diary or other captured document under examination.

Pearl Harbor Planning (Jan.-Nov. 1941)

When Japanese planes struck immobile United States warships and aircraft at Pearl Harbor on 8 December 1941, they were executing pin-pointed plans conceived months in advance and cloaked in the utmost secrecy. Authoritative Japanese documents obtained since the termination of war and interrogations of the high naval personnel who participated in or had knowledge of this planning make it possible to reconstruct a complete and accurate picture of how the Pearl Harbor attack was conceived and developed over an eight-month period preceding the final outbreak of hostilities.

Prior to 1941 Japanese naval planning for a possible war with the United States had been based upon the assumption that the latter would be Japan's only enemy, and it envisaged awaiting attack by the American fleet in the Western Pacific where Japan's numerically inferior fleet could operate at an advantage.[16] By the end of 1940, however, Japan's entry into the Tripartite Alliance and the United States' aid commitments to Britain had created a new international line-up which made previous Japanese naval planning obsolete. The Japanese Navy began to plan for a simultaneous war against the United States and Britain.

The idea of a surprise attack on Pearl Harbor at the outset of war, with the object of gaining at least temporary naval supremacy in the Western Pacific, was first conceived in early January 1941 by Admiral Yamamoto, Commander-in-Chief of the Japanese Combined Fleet. Admiral Yamamoto at that time ordered Rear Adm. Takijiro Onishi, chief of staff of the Eleventh Air Fleet, to study the feasibility of such an attack.[17]

On the basis of this preliminary study, Admiral Yamamoto in June 1941 began actively pressing for the adoption of his plan by the Navy General Staff as part of Japan's naval strategy in the event of war. Crippling the United States fleet at Hawaii at the start of hostilities, he argued, was absolutely essential to place the Western Pacific under Japanese control for the period necessary to complete the occupation of the strategic areas and economic resources of the South. Were Ame-

16 Cf. Chapter IV.

17 ATIS Research Report No. 131, op. cit., p. 66.

rican fleet strength at Hawaii left intact, it could immediately make an incursion into the Western Pacific in the midst of the Southern operations, catching the Japanese fleet dispersed in different areas and unable to deploy for a decisive battle. Under these conditions, he warned, the United States would probably seize Japan's island bases in the Marshalls and transform them into advance bases of operation against Japan.[18]

Despite Admiral Yamamoto's arguments, his plan was vigorously opposed by a section of the Navy General Staff on the ground that swift occupation of the Southern areas was the prime necessity, and that this might fail if Japanese naval strength were divided between operations against Hawaii and support of the Southern invasions. It was further pointed out that detection of the Japanese force en route to Hawaii might result in its complete destruction, and that, even if this did not occur, the attack would be ineffectual if the bulk of the United States fleet was not caught in Pearl Harbor.[19]

This disagreement in the Navy High Command had not been resolved by 10 September, when staff officers of all fleet units assembled at the Naval War College in Tokyo for the annual Navy war games. Just four days earlier the Imperial conference of 6 September had debated the issue of war or peace in a dramatic session and had decided that Japanese military preparations must be speedily brought to completion.[20] The games therefore took place amidst an atmosphere of unusual tension, further heightened by the fact that the central problem of study assumed an American fleet attack into the Western Pacific as a result of Japanese invasion operations in the Southern area.[21]

Admiral Yamamoto himself planned and exercised over-all supervision of the games. A general study session, including chart maneuvers participated in by all officers in tactical command of fleet units, occupied the first three days—10, 11, and 12 September. The last day, 13 September, was devoted to a special study session. Thirteen umpires headed by Rear Adm. Seiichi Ito, Vice-Chief of Navy General Staff, ruled on the execution of maneuvers. The Japanese (Blue) Forces were under command of Rear Adm. Matomi Ugaki, Chief of Staff of the Combined Fleet, and the British-American (Red) Forces under command of Vice Adm. Shiro Takasu, First Fleet Commander.

While the principal games were conducted on the old hypothesis of meeting an American fleet attack in the Western Pacific, a restricted group of staff officers of the Combined Fleet and commanders of those fleet units which eventually made up the Pearl Harbor Task Force[22] met in a separate and top-secret session, the purpose of which was to study problems connected with a possible surprise attack on Pearl Harbor. These problems included:

1. Feasibility of an attack if (as estimated)

---

18 Statement by Rear Adm. Tomioka, previously cited.

19 Ibid.

20 Cf. Chapter III.

21 Summary Report on Japanese Naval War Games. Compiled by Rear Adm. Tomioka, previously cited.

22 In addition to Admiral Yamamoto and other umpires, participants in the special Pearl Harbor study session were: Rear Adm. Ugaki, (Chief of Staff) and nine staff officers of the Combined Fleet: Vice Adm. Chuichi Nagumo, (C-in-C), Rear Adm. Ryunosuke Kusaka (Chief of Staff), and two staff officers of the First Air Fleet; Rear Adm. Tamon Yamaguchi (Commander) and two staff officers of the 2d Carrier Division; Rear Adm. Tadaichi Hara (Commander) and two staff officers of the 5th Carrier Division; the commanders and one staff officer each of the 3d Squadron, 8th Squadron, and 1st Destroyer Squadron. Ibid.

only 50 per cent of American Pacific Fleet strength were in harbor.

2. The possibility of detection by American search planes before the attack could be executed.

3. The refueling at sea of Task Force units with inadequate cruising range.

The conclusions reached with regard to the solution of these problems were those later embodied in the actual operational plan and carried out in the Task Force attack.[23] However, it was not until 20 October, after Admiral Yamamoto had threatened to resign over the issue, that Admiral Osami Nagano, Chief of Navy General Staff, approved the Pearl Harbor plan in principle over General Staff opposition. Preparation of the detailed attack plan was completed during October and finally sanctioned by Admiral Nagano on 3 November.[24] In order to preserve secrecy, knowledge of the plan in its entirety was limited to the Chief and Vice-Chief of the Navy General Staff, the Chief and members of the Operations Section, Navy General Staff, Commander-in-Chief, Chief of Staff, and most staff officers of the Combined Fleet, First Air Fleet and Sixth Fleet.[25] Evidence indicates that Army leaders were not informed until sometime in November, following the issue of Combined Fleet Top Secret Operations Order No. 1.[26]

Even in this order, issued on 5 November, the missions of the Advance (Submarine) Force and the Task Force which were to participate in the Pearl Habor attack were left blank in the printed text, and the missing portions were communicated verbally only to those listed in the preceding paragraph.[27] The commanders of the Task Force units, which assembled in Tankan Bay between 15 and 22 November, were not informed of the attack plan until Vice Adm. Nagumo, commanding the Force, issued Task Force Top Secret Operations Order No. 1 on 23 November, three days before departure for Hawaiian waters.[28] Crew members were told that Pearl Harbor was the target only after receipt of the Combined Fleet X-Day order on 2 December.[29]

October 1941

Prisoner of war Iwataro Fusei, (JA 145118), a civilian laborer in naval employ present at Truk throughout October 1941, stated that:

When he was at Truk in October 1941, there were rumors that a war with the United States would start

25 (1) ATIS Research Report No. 131, op. cit., p. 67. (2) Statement by Vice Adm. Mitsumi Shimizu, C-in-C, Sixth Fleet.

26 "I did not know at the time of the October conference (liaison conference between the Government and Imperial General Headquarters following formation of the Tojo Cabinet) that the Navy already had well-laid plans for the Pearl Harbor attack. . . .At a later conference, I believe in November, I was informed of this plan." Interrogation of General Hideki Tojo, Premier and War Minister, Oct 41–Jul 44.

27 Cf. Chapter V. (extracts from Combined Fleet Top Secret Operations Order No. 1).

28 ATIS Research Report No. 131, op. cit., pp. 78–9.

29 (1) Seaman 3d Class Shigeki Yokota (JA 100037), crew member aboard the aircraft carrier *Kaga* in the Pearl Harbor attack, later taken prisoner of war, stated that on 2 December the Commander of the *Kaga*, Capt. Jisaku Okada, addressed the ship's company and announced that war would be declared against America on 8 December. ATIS Interrogation Report, Ser. No. 230. (2) Another prisoner of war, Seaman Masayuki Furukawa, crew member of the carrier *Shokaku*, stated that the commander "informed the crew of the intended strike on 4 December." JICPOA Preliminary Interrogation Report No. 7, Ser. ADM-101022, 10 Jan 44.

about 25 December 1941 at the earliest and 1 February 1942 at the latest. When he returned to Japan in November 1941, rumors of war were far less current than at Truk.[30]

A "Report on Conditions" issued by Lt. Col. Ryuto, Commanding Officer of the 42d Anchorage Group, dated 15 June 1942, states:

Record of General Situation since Mobilization.

The mobilization order was issued on 12 September 1941. Organization from the Hiroshima Western District No. 2 Force was completed by 17 September. We left Ujina on 29 September, sailing to Osaka where 40th Sea Duty Company was attached to us. We left Osaka on 1 October and reached our destination at Palau on 10 October where we established an anchorage headquarters. Then we made preparations for the landing operations which were to accompany the War for Greater East Asia.[31]

Personal history register of Leading Pvt. Hisazo Kashino of the 41st Infantry Regiment, contains the following entries:

10 October 1941—Left Ningpo.

11 October—Landed at Shanghai.

12 October to 14 November—Prepared for Malayan operations in the vicinity of Shanghai.

22 November—Left Woosung, Shanghai.

8 December—Landed at Singora, Thailand.[32]

November 1941

Diary belonging to an unknown member of the 41st Infantry Regiment contains the entries quoted below. This regiment participated in the attack on Malaya, which was mounted from the port of Samah on Hainan Island.

12 October 1941—Reached Woosung Pier and returned to Kiangwan Barracks.

23 October—Okabe Force was assembled and heard an address from the newly appointed brigade commander, Maj. Gen. Saburo Kawamura. There will be a general inspection of the three battalions tomorrow.

4 November—Jungle combat training for expected type warfare.

13 November—Received rations and other necessary items for tropical combat (medicines and clothing, etc).

20 November—Anchored off Haikow on Hainan Island....

2 December—Weighed anchor and sailed again for Samah.

15 December—Assisted by our guns and tanks, our unit was the first to enter Gubun Street. Capt. Omori, 1st Lt. Nikki, and 2nd Lt. Takahashi were killed. 1st Lts. Okano and Yanagizawa were wounded.[33]

The pamphlet quoted below, entitled, "Read This and the War is Won", was to be issued to each Japanese soldier before he embarked for overseas. The frontispiece consists of a map of South China, French Indo-China, Thailand, Burma, the Federated Malay States, the Netherlands East Indies, and a small section of the Northwest Australian Coast. The date of publication of the pamphlet is not definitely known. A captured copy, however, was received by 55th Division Infantry Group on 10 November 1941. (Elements of 55th Division figured prominently in the attack on Guam in December 1941 and later in the Burma Campaign). Furthermore, its length and the nature of the contents indicate original preparation at a date considerably prior to this. Pertinent sections of this pamphlet are reproduced below:

What sort of place is the southern field of operations?

(1) It is the treasury of the Orient which has been invaded by the white men of England, America,

30 ATIS Interrogation Report, Ser. No. 97, 14 Hpr 43, p. 16.

France, and Holland.

(2) One hundred million Orientals are being oppressed by three hundred thousand white men.

It amounts to this—these whites possess scores of Oriental slaves from the moment they are born. Is this the intention of God?

(3) It is a source of world supply of oil, rubber, tin, etc.

Rubber and tin are essential for military supplies, and for these valuable resources the southern countries are the richest in the East. The malevolence of England and America, who have prevented Japan's purchasing these materials by just means, is one of the reasons which necessitates the present military operations.

It is quite clear that the Netherlands East Indies and French Indo-China cannot oppose Japan alone, but with the support and threats of England and America they are showing hostility to Japan. The lack of oil and iron is Japan's weak point, but lack of rubber, tin, and tungsten is the weakest point of America. America's chief sources of supply of these are the South Seas and Southern China. If these could be stopped, it not only would enable Japan to obtain the much-wanted oil and tin but it would stick a knife into America's sorest spot. The essence of America's opposition to Japan's southward advance lies here.

(4) It is a land of perpetual summer.

Bananas and pineapples are plentiful all the year round; at the same time troublesome malaria-mosquitoes are everywhere. In the Java and Singapore areas motor roads have been developed everywhere, but there are many uncivilized places, jungles, and swamps where neither man nor animals pass.

Why must we fight and how must we fight?

(1) By the Imperial will for the peace of the Orient.

The Meiji Restoration saved Japan from invasion by foreign powers. The Showa Restoration, by complying with the Imperial will for the peace of the Orient, must rescue Asiatics from disputes amongst themselves and the invasion of the white race and return Asia to the Asiatics. Peace in Asia will ensue, and this will be followed by peace in the world being firmly established.

Japan is given a great mission to save Manchuria from the design of Soviet Russia, free China from exploitation by the English and Americans, and then aid the independence of Thailand, Annam, and the Philippines, thus to bring about the happiness of the natives of the South Seas and India. This is the spirit of equality and brotherhood.

(2) While destroying the enemy show compassion towards those without crime.

Understanding this war as one between races, we must enforce our just demands on the Europeans, excluding Germans and Italians, without extenuation.

(3) Is the enemy stronger than the Chinese Army?

Comparing the enemy with the Chinese Army, since the officers are Europeans and non-commissioned officers for the greater part natives, the spiritual unity throughout the Army is zero. It must be borne in mind that the number of airplanes, tanks, and guns is far superior to those of the Chinese Army. However, not only are these of old types but their users are weak soldiers, so they are not of much use. Consequently, night attack is what the enemy fears most.

(4) We must be prepared for the war to be a prolonged affair and proceed with every preparation for a drawn-out conflict.

What course will the war follow?

Long voyage followed by landing operations.

All fields of operations are in the South Seas over a thousand miles from Formosa. Some places take a week to ten days to reach. This wide sea is crossed by convoys of several hundred warships and merchantmen. Looking back, our ancestors conquered this rough sea and carried on trade and fought with wooden sailing ships hundreds of years ago. After several days journey in the confines of shipboard, enemy resistance on the shores must be overcome and landings enforced.

What to do aboard ship:

The most important thing in landing operations is the maintenance of secrecy. If the enemy gets to know in advance where we plan to land, it will be very difficult.

There are many instances where a simple thing

written in a letter has been the cause of the defeat of a whole Army, or where a word dropped over a glass of wine in a cafe just before departure has been the cause of secrets coming to the ears of spies.

Remember how the 47 Ronin kept their secret through such trials until they had avenged their Lord; encourage one another to do likewise.

There is a timely story of a soldier attached to a certain unit, who landed in Southern China during the present Incident, wrote a letter and dropped it in the sea, sealed in a bottle. The letter was carried by the tide to the coast of Korea. Supposing the letter had reached Vladivostok—what would have been the consequence? Often a clue is caught by aircraft and submarines which are at sea to find out the movements of our transport ships. Care must be observed in the disposal of dirt and rubbish.

Battle:

(1) Squalls, mist, and night are over all.

Europeans are dandies, and delicate and cowardly. Therefore, rain, mist, and night attacks are the things they detest most. They consider night suitable only for dances but not for fighting—we must take advantage of this.

(2) Unlike the Chinese soldiers, our present enemy may use gas. If you cast aside your gas mask because of the torment of wearing it in the heat, the consequence may be serious.

Action in particular zones:

Action in swamps and paddy-fields:

French Indo-China and Thailand are, next to Japan, the chief rice-producing countries, and there are paddy-fields everywhere and large swamps here and there. When passing through these places, each soldier must use snowshoes (made of straw and sticks).

The present war is a war with Japan's rise or fall at stake. What is at the bottom of America's action of gradually prohibiting the export of oil and iron to Japan, as if to strangle her slowly by "silk-wool"? If they stopped these exports at once, Japan, in her desperation, might march into the South. If the export of the rubber and tin of the South are checked by Japan, America's own sufferings will be far greater than those of Japan, who is harassed for want of oil and ore. It has been the policy of America up to now not to anger Japan, though weakening her.

Japan has waited too long—if Japan is patient any longer our aircraft, warships, and motor cars will not move. Five years have passed since the beginning of the China Incident. Over 1,000,000 comrades have exposed their bones on the continent. The arms of Chiang Kai-shek, which killed these comrades, were sold mostly by England and America. Both England and America are prejudiced against the solidarity of the Oriental races as something that stands in the way of their making the Orient their permanent colony and are concentrating every effort on letting Japan and China fight. Our allies, Germany and Italy, are continuing a battle of death in Europe against England, America, and Soviet Russia. America is already assisting England and is essentially participating in the war. For the existence of Japan herself and her obligation to the Tripartite Alliance, not a minute longer must be endured. Japan is confronted with a great mission, bravely to put the last finishing blow, as representatives of the Oriental race, to their invasion of several hundred years. Our incomparable Navy is in full readiness and is infallible: 5–5–3 is the ratio in figures, but if spirit is added, it is 5–5–7. Moreover, half of the British Navy has been smashed by Germany. For the Navy, now is the best time. The Chungking Government's umbilical cord is joined to England and America. Unless this cord is severed soon, the Japan-China Incident will never be permanently settled. The total settlement of the holy war is the present war. The spirits of over a hundred thousand warriors are guarding us. The mass for the dead comrades is to win this war.

Whilst showing our heartfelt thanks to the Navy, who, conquering thousands of miles of sea and removing enemy interception, are protecting us without sleep and rest, we must fully repay them for their trouble with good war results. We are privileged with an important and honorable mission to stand as representatives of the Asiatic race and to reverse the history of the world, succeeding our glorious history of 2,600 years and for the trust and reliance in us of His Majesty the Emperor. Both rank and file with one mind must exhibit the real value of Japan's sons in this full-dress display watched by the whole world.

The completion of the Showa Restoration to free Asia in realization of the Imperial will, which is for peace in the East, rests on our shoulders.[34]

The pamphlet entitled, "Message to Warriors in the South Seas", was issued on 15 November 1941 above the signature of Maj. Gen. Horii, Commanding General of the South Seas Detachment, which comprised the main force in the attack on Guam.[35]

RESTRICTED
A Guide for Warriors in
The South Seas

South Seas Detachment Hqs.
15 November 1941

Horii Force Staff—Educational Pamphlet No. 1
Instructions regarding the attached "Message for Warriors in the South Seas"

To all units and militarized civilian personnel under my command:

This pamphlet, together with the previously distributed "Collection of Imperial Rescripts," to which are annexed: "Field Service Instructions" and "Read This and the War is Won", is to be used as material for the practical strengthening of morale in the field.

15 November 1941
Tomitaro Horii
Commanding General,
South Seas Detachment

Instructions given to the officers, men, and civilian employees under His Majesty the Emperor and under my command, on the occasion of the formation of the South Seas Detachment and their departure for operations:

In obedience to the orders of His Imperial Majesty, I now take command of your honored unit as an independent force, and am about to undertake a vital duty. I cannot repress my deep emotion, and I feel keenly the gravity of my responsibility.

I am convinced that the world situation surrounding East Asia faces an unprecedented crisis, and the fate of the Empire hangs in the balance. I believe that all of you, habitually bearing in mind the Imperial Edicts, have obeyed the orders of your superiors and have striven with all your might; however, at this time when your unit has been newly organized and is about to take the field, you are to stress to yourselves these three great principles with fullest courage:—

The strict observance of military discipline; the strengthening of esprit de corps; and the determination to fight to the death for certain victory. Whether you be under the higher commands or under the command of subordinate officers, whether you be officers or militarized civilian personnel, true to the spirit of loyalty, you are to have faith in and assist the combined action of the land and sea forces working together as one body; thus you shall do your utmost to utilize the results of your training and to display the combined fighting strength of the detachment.

You will take care of yourselves, bear in mind my wishes, and upon the opening of hostilities determine to exalt still more the true worth of the Detachment, swiftly bringing the Holy War to a successful termination, and thereby carrying out the Sacred Imperial Desire.[36]

The professional notebook of Ensign Toshio Nakamura, contains the following passage:

Address by our Captain upon the occasion of my boarding ship. Delivered by Capt. Yuji Takahashi (of the heavy cruiser Kako) 16 November 1941:

For three years you have studied your duties diligently. And now I believe that as you stand here, at the battlefront, your emotions have been heightened as you sense impending action.

When you reflect upon it, this is no training squadron; you have been assigned directly to the front.

---

34 ATIS Research Report No. 131, op. cit., pp. 13–15.

35 This is the same commander and the identical unit which later operated in the abortive Japanese drive over the Owen Stanley Mountains, in New Guinea, toward the vital Allied base at Port Moresby. The South Seas Detachment had been organized under Maj. Gen. Horii's command by 15 November. ATIS Enemy Publications No. 41, *Miscellaneous Personnel Records of Horii Butai and Sakikawa Butai*. 8 Sep 43, p. 10.

PLATE NO. 3

Resting Comrades

Officers in charge of your guidance and their assistants have been selected; but the fact of the matter is that each and every one of them has his battle station and shall not be able to devote his wholehearted attention to your instruction. You appreciate, I am sure, the present situation and will not depend on others too heavily. You must undertake your duties assertively, with a healthy spirit of initiative. Moreover, at this time, special emphasis should be given to the caution, 'Always be at your station!' It is extremely important that line officers always be on deck, so that they are able to master anything that comes along. In short, the present situation is certainly nearing its climax; indeed, it is in its most pregnant stage. I earnestly desire from you an uncommon amount of determination and effort.[37]

Diary belonging to Superior Private Yamashita of 3d Battalion, 41st Infantry Regiment, contains the following entry:

18 November 1941—About 1530 hours left Shanghai, which has so many memories for me, and boarded Ryujo Maru at 1730 hours. . . .with Kiating as the objective, the brigade has been deployed for maneuvers in order to exploit all the more its success as a mechanized force. We are keenly feeling the pressure of the situation and orders have eventually come. The time has finally come for us to display activity. Are we going to be at war with the three powers A, B, and D? (Letters are written in English in the original). With a feeling of serious tension, I am aware that the most gratifying event since the beginning of Japanese history is the fact that we have now set out for the field.

21 November—Anchored in sight of Takao.[38]

Partial translation of a file dated July—December 1941, entitled "No. 3 Situation of Both Sides Prior to the Outbreak of War," (issuing authority unknown), is set forth below. The section quoted is not dated, but it is apparent from internal evidence that it antedates 23 November 1941. The Tanaka Detachment landed in the vicinity of Aparri on 10 December 1941.

IV. The Tanaka Detachment will start embarking at Takao between 23 and 25 November. The plan of embarkation is as shown on the attached sheet.

As from 0000 on 26 November, the Detachment will come under the direct control of Lt. Gen. Masaharu Homma, Commanding General, Fourteenth Army. The troops newly attached to the force will come under the command of Tanaka Detachment as of 0001 hours on 26 November. . . .

Preparations having been finally completed, the convoy carrying Tanaka Detachment sailed at 1700 hours on the 7th from Mako Anchorage in the Pescadores under the direct guidance of escorts. Sailing through the Straits of Formosa in a rough sea, the officers and men were in high spirits. No enemy airplanes or submarines were encountered.

During the evening a squall came up but the convoy sailed on. All were ready and anxious to meet the enemy.[39]

Address No. 29 by the Commanding Officer of the light cruiser *Katori*, dated 26 November 1941 (Wednesday) at sea, and bound with a number of news reports and official communiques summarized by 00/61 Naval Intelligence Section, is set forth below. Part of the page was burned. A complete translation of the remainder is given:

Thirty-seven years ago, when war between Russia and Japan became inevitable, the Emperor Meiji approached the Russian Government asking them to reconsider the declaration of war, to do everything possible to avoid the consequent calamity. We were extremely grateful for his benevolence.

Recently when Ambassador Kurusu was ordered to the United States—(I do not know whether he was sent for the same purpose as in the above incident before the Russo-Japanese War or not)—but at least

37 JICPOA Translations, Item No. 4986, pp. 25 Apr 44, 1, 67.
38 ATIS Current Translations No. 45, 1 Jun 43, p. 27.
39 ATIS Current Translations No. 46, 2 Jun 43, pp. 2–3.

I believe that he carried with him the Emperor's sincere hope that the evil of this war would be prevented. It is clearly known that this procedure is the tradition of our Empire.

In spite of the Emperor's benevolence, however, the American statesmen are arrogant and think that they are the greatest people in the world, and nothing can shake their belief. I suppose, therefore, in spite of the attempt of Ambassadors Nomura and Kurusu to prevent war, there is no hope of a peaceful settlement.

Ultimately, there is no other way to determine the outcome than by using our own force. At this particular time, we of the Katori, attached to Sixth Fleet, are about to take our place in the disposition of the fleet. Not only the submarine force, but also the Air force and surface units are mobilizing. It will not be long before operations begin.

I would like you to understand that when we put to sea the day before yesterday, it was not for an ordinary voyage, but for something entirely different. At this time, I would like you to bear in mind that we have an opportunity which comes but once in a lifetime. . . .[40]

Diary, presumably belonging to a member of 144th Infantry Regiment, contains the following entries:

17 November 1941—Today we held a review and ceremony for leaving for the field, participated in by all personnel of the unit. . . .

21 November—Advance party left in the morning. Unit commander in charge of military flags left about 1300.

23 November—It rained during the morning and we departed in the rain. We left from Asakura Station at 1950, arrived at Sakaide about 0500. . . .

24 November—Departed Sakaide. Matsue Maru left harbor at 1810.

25 November—We left the Inland Sea and headed southeast. . . .

26 November—Our battle zone will be Guam Island. . . .In the morning I went on deck and saw transports to the left, right, and rear. On anti-aircraft observation duty.

28 November—Arrived at Haha-Jima about 1650. . . .

1 December—Held maneuvers during morning. Went on antiaircraft observation duty. About 1500 ship (TN: or "ships") got under way. Roused at 2200 for landing operations. Roused again at 0100. About 0700 we returned to Haha-Jima Harbor. . . .

4 December—Gave Banzai facing toward Asamiyazo and left the harbor of Haha-Jima. At 0930 we proceeded southeast to "X". We received an order announcing the declaration of war. We expected to land at "X" on the 10th. . . .[41]

Diary of Seaman 2nd Class Tsuneya Kamimura contains the following entries:

22 November 1941—Went to Yokohama in the afternoon. Was invited aboard the Arima Maru for supper.

24 November—Sailed at 1400 hours. It is said that we are taking a direct route southward to Truk. Outside the harbor we sighted the Hikawa Maru.

Particularly on this voyage an air of seriousness prevails which has been lacking on most occasions. Received 10 Yen through telegraphic remittance. I presume that we will not be receiving any pay for a substantial period.

2 December—Left Truk at 0900 hours for Kwajalein. We cruised, sharply on the lookout for mines. Today is the fifth day of preparations, and dispositions have been completed. It is rumored that on the sixth day the Navy is to advance on a simultaneous general attack. Can it be a fact? Though I try to consider it calmly, my eyes and body reveal a state of excitement.

7 December—In the morning, after inspection of our division was concluded, the ship's captain gave us an address and read the Imperial message. We were instructed that action would commence at 0100 hours on the morning of the 8th. I was very excited on hearing that Japan would declare war on the United States, Great Britain, and the Netherlands East Indies. Comfort packets were distributed among us. Was

40 ATIS Enemy Publications No. 67, *News Report and Official Communiques*, 10 Dec 43, p. 1.

41 ATIS Captured Document No. 98, 24 Oct 42, pp. 1–3.

mightily glad to receive them. At 1900 hours we separated from the special service ship. After anchoring I drank beer and got drunk.[42]

Personal history register of 1st Class Pvt. Tadatoshi Yamakawa of the 41st Infantry Regiment contains the entry quoted below. The original attack on Malaya was mounted from Samah:

28 November 1941—During assembly off Samah Harbor on Hainan, was admitted to a hospital ship from Kyushu Maru.

1 January 1942—Overtook his own unit at Kampar, Perak.[43]

Diary, owner and unit unknown, but presumably a member of the South Seas Detachment, contains the following entries:

18 November 1941—From 1000 hours infantry group held war exercises under General Horii.

24 November—Left Marugame at 0630 hours. Boarded Matsue Maru at 1530 hours. Sailed at 1800 hours.

28 November—1650 hours stopped over at Haha-Jima, Ogasawara Archipelago.

29 November—Went ashore for communication. America has disguised herself till now. We are going to meet the enemy at Guam Island with ever-increasing spirit.

3 December—Landed Haha-Jima at 0230 hours to wash clothes. It seems that the Japanese-American talks will finally break down.

4 December—Worshipped the Imperial Palace at 0830. Gave 3 Banzais! There was a speech. Japan-America, War! It looks as though the hardships we have borne until now will be rewarded! We have received life for Showa's reign. Men have no greater love than this. Convoy to sail! 0900! Now, prosper, fatherland!

4 December—South Haha-Jima at 1422 hours. 'The Empire has decided to go to war against America, Britain, and Holland. The Southern District Army will quickly capture important regions in the Philippines, British Malaya, and the Dutch Indies after beginning attack on 8 December.

'For this purpose the first Japanese air attack will be carried out.

'The South Seas Detachment will co-operate with Fourth Fleet to capture Guam. If there is no separate order, the landing will take place on 10 December.

'Horii Operation Order A, No. 17. Each unit will act according to Order A, No. 7, which has already been issued.'

8 December, 1100, war declared![44]

Diary, owner and unit unknown, but presumably a member of the South Seas Detachment, contains the entries set forth below. The entry of 29 November 1941 anticipates a Japanese landing north of Talofofo Bay on Guam.

22 November 1941—0327 hours. Reached Sakaide. 1000 hours. Inspection tour of the Cheribon Maru.

23 November—1700 hours. Left Sakaide.

27 November—Sighted Bonin Islands. 0800 hours, reached Haha-Jima.

28 November—0900 hours. Went to Yokohama Maru for liaison.

29 November—Training for boarding motor barges during the morning. It has been decided that battalion will land on the north side of Taro Bay (presumably Talofofo Bay on Guam).

2 December—Anchorage point penetration training from 2000 hours.

3 December—Battalion officers to meet on Yokohama Maru from 0900 hours. Training in smoke flares and gas. Conference of company commanders, decided to land at Iriya Bay. Two first-class cruisers came to the anchorage point to escort us and we

43 ATIS Current Translations No. 64, 13 Jul 43, p. 17.

44 Ibid., p. 1.

feel very safe.

4 December—The convoy left at 0900 hours.

6 December—Heard the Japanese news broadcast in the salon. Our mission is to attack the United States.[45]

Diary belonging to Ifuji, a member of Palau No. 3 Defense Unit, contains the following entries:

29 November—War? All leave was cancelled and I heard that a huge Army unit is out here somewhere. (Written at Palau)

5 December—We received a written order from Commanding Officer of No. 3 Base to take up No. 2 Guard Dispositions from today; it is really going to be a serious affair.

6 December—It is said that American airplanes are reconnoitering our positions.

8 December—Declared war on America and Great Britain.[46]

December 1941

Diary, owner and unit unknown, contains the following entries:

24 November 1941—Embarked on Daifuku Maru (3,523 tons) of N.Y.K. Line at Sakaide.

26 November—Destroyer Uzuki is escorting our convoy.

2 December—Loaded horses at Haha-Jima.

4 December—Order of Tomitaro Horii, South Seas Detachment Commander:

On 2 December Imperial Japan decided on war with Great Britain, the United States of America, and Holland. Imperial Japan will, on 8 December, carry out its first air attack against the United States. This detachment will, if there is no special order, land on Guam.[47]

Diary of Haruichi Nishimura, member of 1st Special Naval Landing Party, Yoshimoto Unit, contains the following entries:

7 November—Conscripted.

30 November—Boarded Kirishima Maru at Ujina. Escorted by Destroyers No. 36 and 37. Headed for Palau.

2 December—Heard over radio that American fleet (5 ships) had left harbor. Heard that we are to land on the Philippine Islands after resting at Palau.

5 December—Arrived Palau.

6 December—Enemy submarine sighted 5000 meters away.

7 December—Relations between United States and Japan are getting worse.

8 December—War was declared at 0800. Katsuta Maru sunk.[48]

File of reports, entitled "Thailand Operations," belonging to the 77th Air Regiment, contains the following passage:

4–7 December 1941—Protection of Twenty-fifth Army transport convoy and preparation for occupation of Thailand.[49]

Diary belonging to Shigeo Morikami, of Horii Force (South Seas Detachment), Takamori Unit, contains the following entries:

22 November 1941—Our departure for Sakaide leaving familiar Zentsuji behind. About 1930 hours left Sakaide Harbor behind, bound in 00 direction.

23 November—About 0500 hours our ship stopped. A mountain can be seen to the east, and a factory zone below it. My friends were saying that it was Senshuji.

27 November 1941—We also put in at Chichi-Jima at 0100 hours. We again departed for Haha-Jima at 1100 hours.

28 November—Landed the horses at Oki Village Grammar School on Haha-Jima.

3 December—Sailing preparations.

4 December—Will depart for Guam Island, which is called Omiyajima.

5 December—Will depart at 1000 hours. We are cruising safely.

6 December—Cruising safely. We will disembark

45 ATIS Current Translations No. 52, 11 Jun 43, p. 31.

in three days.

8 December 1941—Imperial General Headquarters. War was declared against England and the United States at 1230 hours. In the afternoon, I heard from Captain Takamori that the Hawaiian Islands are being bombed by our Air force. The Philippines and Hong Kong are also being bombed. At 0800 hours of the 8th, our Takamori Unit worshipped the Palace. We will finally begin landing from 1200 hours of the 9th. On the morning of the 8th, some islands could be faintly seen for the first time.[50]

Diary belonging to Yaichi Takahashi, of South Seas Detachment, Antiaircraft Unit, Takahashi Platoon, contains the following entries:

14 November 1941—We finally received orders to go to the front. On 28 July we had separated from the friendly 73d Force in Korea and were reorganized as the 47th Antiaircraft Battalion. On 14 November at 0900, we carried out the last ceremony of farewell on the parade ground. When we were leaving for the front, Commander Fuchiyama gave instructions and read a written oath addressed to the Imperial Palace. I have no reluctance in giving my life and being killed in action. We went up to the Goku Shrine to pray for our ultimate victory. We received sacred Sake from the god. Then we shouted "Banzai" three times and dismissed.

At 1900, we entrained. We were on a freight car. About 50 troops. All were waiting the time for leaving the friendly Kainei. . . .

17 November—At 0600, we eventually arrived at Pusan Station. We stayed in Pusan City today.

18 November—Today the Iso Unit is leaving. At 1300, the loading was finished. It was about two years since we were on a ship. The inside of the ship was the same as when we came on her. After a time I noticed that the ship was sailing.

19 November—This is Japan. It was two years since I had seen Japan. Ujina—the Iso Unit was divided into two groups here, then we were all embarked on the big ships. I was in the Takahashi Platoon. The ship was the Matsue Maru.

On the 23rd at 0600, we arrived at our destination, Sakaide. At 1730, we finally left. We did not know where we were going. On the 28th at 1630 hours, we caught sight of a big island northeast of the ship. Several ships which had come before us were at this island, Haha-Jima. It was four days since we left Sakaide. . . .

4 December—At 0930 hours, we eventually left the island. We immediately began to prepare for combat. Approaching enemy position. We were on board 18 days, and every day was the same routine. On 11 December at 0100 hours, we came, at last, face to face with enemy positions. We have a mission on Guam Island.[51]

Diary and notebook belonging to Yutaka Morita, of 144th Infantry Regiment, contains the following entries:

22 November 1941—0140 hours. Arrived Sakaide Station in Kagawa Prefecture. Boarded the transport Moji Maru with 9th Company, one company of mountain artillery, 3 guns, 50 horses, cavalry, and part of an engineer unit.

1 December—Afternoon. Prepared for landing. Held landing practice. Warships and transports started out of Chichi-Jima at 1800 hours preparatory to departure.

2 December—0030 hours. Waited two hours with landing equipment but the motor boats were not ready and the landing was cancelled. The ships and transports returned to Chichi-Jima at 0600 hours, 1330 hours. Four warships, eight airplanes. Loaded some more horses on the ship again.

4 December—0930 hours. Warships and transports which were in readiness at Haha-Jima harbor sailed for their destination.

5 December—Convoy sailed south.

10 December—Landed Guam Island at 0400 hours.[52]

---

50 ATIS Current Translations No. 49, 9 Jun 43, p. 34.

51 ATIS Current Translations No. 68, 23 Jul 43, pp. 33–4.

52 ATIS Current Translations No. 10, 25 Dec 42, pp. 17–9.

Diary belonging to Leading Pvt. Sagaei Matsuura, of the 144th Infantry Regiment, contains the following entries:

29 September 1941—Received induction orders.

5 October—Entered service.

8 October—Completed mobilization.

22 November—Embarked. Sailed in the evening. Arrived off Osaka in the morning. We did not sail during the day. Set sail at night. Headed due south. We sailed southward till the morning of 27th. When I went up on deck in the morning, I saw a little island. It was one of the Bonin Islands.

27 November—Reached Chichi-Jima. Departed at 0900 hours the same day. Reached Haha-Jima before noon and anchored. There are not many people living on this island. Ships come here one after another. The bay is filled with large ships. It seems as though there are about seven or eight men-of-war here too. At first there were names on the warships; Uzuki, Yuzuki, and Kikuzuki etc., but the names were taken off. This transport ship had MI written on the smoke stack but it also has been removed. Horses were unloaded on Haha-Jima. Horses and dogs romped around the hills. Those who had previously been here say that the women are not beautiful, but they speak the Tokyo dialect. We fished to pass the time till 4 December. In the meantime horses were loaded. I suppose we are again headed for hot places. We had mosquito nets and lunch boxes made for us.

4 December—Today we are really going to set out for our destination. We sailed around 10 o'clock. We started in the morning with a warship as escort. It was the Kurogame. They were practically all carrying airplanes. As soon as we entered this harbor, two airplanes were started as if they had rehearsed going out on reconnaissance. There were many escort ships. As long as the Navy is present, there is nothing to be afraid of.

6 December—Tomorrow, we are told, Guam Island will be attacked and occupied. During the voyage all necessary preparation of arms, such as 150 rounds of ammunition, were in readiness. With these we can kill. It is heavy, but I feel like taking more.

10 December—At 0200, we will bid farewell to this boat. We got on this boat on the 21st and started to sail on the morning of the 10th. We lived on it for 20 days. At night we made various preparations for tomorrow's landing. I packed food for 3 meals in my haversack along with 150 rounds of ammunition. It is supposed to be packed as light as possible, but it is very heavy. We landed on one portion of the island which was barely visible in the dark. We anticipated enemy fire but did not encounter any. We landed successfully without incident.[53]

Diary belonging to Gumpei Imoto, of French Indo-China Expeditionary Force, 106th Land Duty Company, contains the following entries:

1 November 1941—Reached Saigon at 0600 hours.

27 November—Left Saigon at about 1400 hours.

28 November—En route.

29 November—En route.

30 November—En route Taikai Maru.

1 December—Safely arrived in the morning at Hainan Island.

2 December—Still anchored at Hainan.

3 December—Remained aboard Taikai Maru until 1600 hours and transhipped to Kashii Maru. Stayed aboard that night.

4 December—Departed at 0600 hours for our destination.

7 December—Reached Singora safely at 2400 hours.

8 December—At 0300 hours, made preparations for opposed landing. Around 0600 hours an unopposed landing was made. Took the enemy completely by surprise.[54]

Diary belonging to Chitoshi Sato, of South Seas Detachment, contains the following entries:

14 November 1941—Departed for Pusan.

15 November—Travelling south by train.

16 November—Still on train.

17 November—Approached Keijo.

19 November—Loaded guns on ship and sailed from Pusan harbor.

---

53 ATIS Current Translations No. 62, 7 Jul 43, pp. 19–20.

54 ATIS Current Translations No. 57, 26 Jun 43, p. 8.

20 November—Entered Moji harbor at 0700 hours, loaded coal at Ujina harbor, was separated from battery commander and 2d Lieutenant Takahashi. Loaded guns on Matsue.

22 November—Left Ujina harbor for Sakaide. Went through Inland Sea.

24 November—Left Sakaide in the evening.

27 November—Escorted by warship Uzuki.

28 November—Arrived at Ogasawara Islands.

29 November—Landed at Haha-Jima.

30 November—Picked bananas, coconuts, and papayas at Haha-Jima.

4 December—0900 hours left Ogasawara. . . .

10 December—Infantry made opposed landing at Guam this morning at 0100 hours.[55]

Diary belonging to Susumu Kawano, of 106th Land Duty Company, contains the following entries:

23 September—Drilled. Inspection for all mobilized personnel. From 0700 hours visitors were allowed in camp area.

6 October—1700 hours arrived Saigon.

23 November—Left on transport Tokokawa Maru.

25 November—Arrived Samah, Hainan Island. Transferred to Kashii Maru.

5 December—30 transports headed towards the theater of operations with naval escort.

8 December—Made opposed landing at Singora, Thailand.[56]

Diary, owner and unit unknown, contains the following entries:

24 November 1941—Arrived at Haikow, Hainan Island.

27 November—Left Haikow.

30 November—Arrived at Humen.

2 December—Left Humen.

4 December—Arrived Samah harbor.

5 December—Sailed from the harbor at 0400 hours for operations.

8 December—Arrived at Singora, Malay Feninsula at 0140 hours.[57]

CHAPTER II

PRE-WAR JAPANESE ESPIONAGE AND INTELLIGENCE

1940–1941

General

Japan's strategic planning of its war operations was based upon intelligence gathered by the armed services and their overseas agents over a considerable period of time preceding the outbreak of hostilities. When the Japanese forces struck on 8 December 1941, they possessed a fairly accurate knowledge of ground, air, and naval strength in the areas attacked, of the locations of airfields and fortifications, and of the terrain and climatic conditions under which they would have to fight. As the operations progressed, gaps inevitably became apparent in Japanese intelligence, but these were not serious in the first phase of hostilities.[1]

Examples of the type of information gathered and available to Imperial General Headquarters for the planning of the initial operations are the original intelligence maps reproduced in Plate Nos. 4 and 5. The sketch map showing the dispositions and strengths of American, British, and Dutch Air forces in the Philippines and Southern area (Plate No. 4) was issued on 6 December 1941 by Army Air Defense Headquarters at Keelung, Formosa. It bears the notation that the map was compiled "before the crisis" and that the air strengths indicated were "estimated currently to be undergoing marked reinforcement." The map reproduced in Plate No. 5 contains detailed order of battle information on Australian ground forces as of July 1940.

Similar maps showing troop dispositions and strengths, airfields, and other military installations on the islands of Java and Sumatra were compiled prior to the war and used in the planning of Southern Army operations. (Plate No. 6)

Augmentations of British troop strength in the Malaya, Singapore, and Burma-Thailand border areas in the months prior to the outbreak of war were noted in a "Simplified Table Showing Changes in the Southern Situation Since August 1941", issued by 20th Division Headquarters. Extracts containing intelligence apparently derived from confidential Japanese sources follow:

(From Chief of Staff Report, mid-September 1941)
Strength on the Burma-Thailand border is approximately 50,000. In Burma there are an additional 2,000 to 3,000 Volunteer Army troops.

(From Chief of Staff Report, end October 1941)
Increase in strength in Malaya is presumed to be 10,000 Australian troops. Strength at Singapore in mid-August was approximately 5,000 Australians. Although information is lacking on numbers, transports carrying Australian reinforcements had reached Singapore by the end of August. The regular Army strength of 48,000 has reached approximately 60,000. If a rough estimate of the

1 Until the capture of Manila, intelligence was lacking regarding the existence of strong defense positions on Bataan Peninsula. Cf. Chapter VI. All source materials cited in this chapter are located in G–2 Historical Section Files, GHQ FEC.

TRANSLATION OF ANNOTATED SKETCH ISSUED BY ARMY AIR DEFENSE UNIT. (ATIS ENEMY PUBLICATIONS NO. 11, P 16)

PLATE NO. 4

Disposition of Air Forces in South Sea Area

increase in Hindu troops is included (increase not according to confirmed intelligence), total strength does not exceed the estimate of 71,000–75,000 by the Singapore Foreign Affairs at the end of August.[2]

Philippines

The Army General Staff was also in possession of extensive intelligence concerning the defenses of the Philippines. A compilation of reports entitled, " Situation of Both Sides Prior to the Outbreak of War ", covering the period from July to December 1941, contained estimates of American and Filipino troop and air strength as follows :[3]

The strength of the American Garrison Army in the Philippines was 12,000 (American about 5,500; native about 6,500). Because of the international situation, however, this number was increased by about 5,200 Americans and 6,000 natives, so that by July of this year, the total reached 22,000. The Filipino National Guard and patrol scouts were included under General MacArthur, the American Far Eastern Army Commander, who was to undertake the united command of all troops in the Philippines.

Status of the American Garrison Army:

1. Philippine Division:

24th Infantry Brigade was not in operation in peacetime, but its Headquarters was established at Santiago about July 1941.

2. 94th Tank Battalion (American) was newly organized at Fort Stotsenberg.

3. The strength of the Air Force has increased successively as follows:

	Army
24th Pursuit Regiment	*P-35*
3d Pursuit Squadron	*P-36*
17th Pursuit Squadron	*P-38*
20th Pursuit Squadron	*P-40*
24th Pursuit Squadron	*27 planes at Nichols Field above types included.*
19th Bomber Regiment	
1st Pursuit Squadron	
14th Bomber Squadron	*B-17 (12 planes)*
28th Bomber Squadron	*B-18 (13 planes)*
36th Bomber Squadron	*(Type of plane unknown)*
2d Reconnaissance Squadron	*O-19, O-46,*
19th Reconnaissance Squadron	*O-47, O-52, (13 planes)*

4. The Philippine Defense Regulations call for development of divisions of 7,600 officers and men. (Referred to on separate sheet.) However, indications are that many divisions are far from complete, and some even lack regimental commanders. Also, the required equipment is not provided, and some infantry regiments are not equipped with infantry guns.

5. Training points in Luzon are as follows:

Aparri	*Laoag*	*Vigan*
Bangued	*Toridanito*	
Echague	*Tuguegarao*	

12th Infantry Regiment is training in Luzon.

6. For defense purposes, Luzon is divided into northern and southern districts. Planes reported in Central Luzon are as follows:

Fighters	*130*
Bombers	*30*
Navy patrol planes	*20*
Total	*180*

Extensive aerial photo coverage of northern Luzon, including the Lingayen Gulf, Vigan, and Aparri coastal sectors (Plate No. 2), was obtained by Imperial General Headquarters a year before the outbreak of war. Commercial planes of the Nippon Airways, manned by military pilots and observers, flew seven photographic missions over Luzon between 27 November and 15 December 1940, ranging as far south as Lingayen Gulf on the west coast and Baler Bay on the east. Lamon Bay, where the Japanese 16th Division landed in the invasion operations, and Bataan Peninsula were not covered by these missions. Flights were made at an altitude of over 21,000 feet and, except at the southernmost point, beyond range

2 ATIS Research Report No. 131, *Japan's Decision to Fight*, 1 Dec 45, p. 33.

3 ATIS Current Translations No. 46, 2 Jun 43, pp. 1–2.

of detection by defense installations at Clark Field.[4]

New Guinea

Detailed reports by military intelligence agents who toured the southern areas prior to the war were also in the hands of the Army planning staffs. One such report, made by Major Tetsuo Toyofuku[5] on the basis of personal observation in March 1941, covered British New Guinea and was used as the basis of an intelligence study on this area compiled by the Army General Staff. The study was reproduced by General Headquarters, Southern Army, in 1942 for use in the New Guinea operations. Text of the study, entitled "Military Data on British New Guinea," follows:

Part I—Military Value of British New Guinea and Solomon Islands:

These possessions, together with the Dutch East Indies Archipelago, form a natural barrier intersecting the Pacific Ocean from north to south. The northern end is within the radius of action of our bombers from most of our South Sea Mandated Islands, and the southern end is within the radius of action of bombers from the northern part of Australia. (It is approximately 1000 kilometers from Truk and Ponape Islands in our South Sea Mandate, to Rabaul, capital of the Australian Mandated Territory; approximately 1250 kilometers from Cooktown, North Australia, to Rabaul, and approximately 600 kilometers to Port Moresby.) They are separated from the Australian Continent by the narrow Torres Strait. Consequently, possession of this territory would make it easy to obtain command of the air and sea in the Southwest Pacific and to acquire "stepping stone" bases for operations against Australia. Control of the southern coast of New Guinea, in particular control of Torres Strait, would cut communications between the South Pacific Ocean and Dutch East Indies as well as the Indian Ocean Area, and would force the enemy fleet to detour to the southern coast of Australia.

Part II—Observations on Landing Operations in British New Guinea:

The area of the Bismarck Archipelago is approximately 50,000 square kilometers and corresponds to the combined area of our Formosa and Shikoku. However, the population of these territories (New Guinea and Bismarcks) is approximately 850,000 natives, most of whom live in the coastal regions.

Nowhere are these territories as yet developed.

Since the greater part is uninhabited, the communications facilities naturally are poor, and even the roads are like the government roads of Australian-controlled New Guinea, whose total length is only 136 miles (approximately 218 kilometers) of which 109 miles is in the Central Province, 16 miles in the Eastern Province, and 11 miles in Southeastern Province. It is recognized that these roads only connect the villages in the vicinity of the coast.

In regard to present military preparations, it appears that there are small forces and installations in the important political and transportation centers such as Rabaul, Port Moresby, etc. The other sections of the territory are not defended at all.

Landing operations on these various islands can, therefore, be carried out easily at any place where it is possible to land. However, advance and occupation from the captured points by land would be extremely difficult and practically impossible in view of the undeveloped road system and the difficulty of supply. Therefore, even if a point is occupied, it will only secure the vicinity of that point, and occupation of the whole territory will be difficult unless the enemy's fighting spirit is completely demoralized.

It would be advisable to attempt landing operations at Rabaul, Lae (capital of the Australian Mandated Territory), and Port Moresby (capital of

---

4 Original aerial photographs, showing date and time of flight, altitude, name and rank of pilot and observer, were obtained from the Imperial Land Survey Bureau, Japanese Government. On file with Engr Intel Div, GHQ FEC.

5 The experience gained by this officer was subsequently utilized through his appointment to the staff of the South Seas Detachment, which landed at Buna in July 1942 and was virtually annihilated in the Owen Stanleys and Buna campaigns.

Australian controlled New Guinea), which are points of military, political, economic, and communications importance. Considering the weakness of the enemy's present defenses and the strength that will be sent to this area by the Australians in the future, great strength will not be required. There are dwellings in these cities, but commodities, especially food and drinking water, are scarce, and self-sufficiency for a long period would be difficult. Our necessities, especially rice, bean paste (miso), and soy sauce, are not stored at all, so there is no other way but to depend on supply from the rear. The difficulty of supply from the rear must be recognized, and it will be necessary to carry large quantities. . . .

Landing Operations at Port Moresby:

(1) General Condition of Harbor and City:

Port Moresby has a good, wide harbor, and the bay is entered by passing between Hanudamava Island (at the mouth of the harbor) and Bogirohodobi Point, approximately 1.5 miles to the east. At the beginning of 1940 there were approximately 800 Europeans, approximately 20 Chinese, and no Japanese residents. The natives (approximately 2000) have built their village over the water and live apart from the white residents. The city is situated between Tuaguba Hill and Ela Hill on the eastern shore of the harbor, and is the center of the government, military affairs, economics, transportation, communications, etc. of Australian-controlled New Guinea. There are various offices, including government offices and branch offices, a radio station, a government-managed electric power plant, church, school, European and native hospitals, an ice plant, bank, hotels, etc.

(2) Value of Port Moresby as a Naval Base:

Although the harbor is rather small for a fleet base, it is fairly deep (maximum 10 fathoms), and the bottom is alluvial soil, and one or two squadrons could anchor without difficulty. A space between the coral reefs outside of the harbor offers a very wide anchoring place, large enough for a large fleet to anchor. However, installations for repairs and supply have not been fully established, so it is valuable only as a port of call.

(3) Military Preparations:

Information obtained by observation of the actual area follows:

(a) Garrison Strength:

Army:

There is a barracks at Granville East (approximately 1 kilometer northeast of the city), which, judging from its size and the amount of equipment, can accommodate approximately 1,000 men. The present garrison appears to be composed wholly of infantry troops, without artillery.

Others:

A Royal Australian Artillery Detachment (2 officers, 38 non-commissioned officers, and privates, who arrived with 6-inch guns) apparently is stationed on Ela Hill and will be reinforced, judging from the fact that the number of barracks on the hill is being increased.

Navy:

The strength is not known but appears to be about 30 men. The orderly room is located at the side of the government pier. The station ship has not been identified; only 2 or 3 launches have been identified.

(b) Installations:

A road for military use has been built to the top of Ela Hill, and two 6-inch guns are placed on top of this hill. The main line of fire of these guns apparently is directed toward Basilisk Passage. The guns are exposed on top of the hill. According to information, they will be increased by two more guns. In addition to the Kila Kila airfield, approximately 4 kilometers east of Port Moresby, an airfield for military use, approximately 11 kilometers from Port Moresby (location unknown), is expected to be constructed. A single road parallel to the coastal highway, and halfway up the hill of Tuaguba, is being constructed.

(4) Passage of channels:

The greatest difficulty in a landing operation at Port Moresby would be passing through the waterways. There are three channels entering the harbor of Port Moresby. Liljeblad Passage, on the extreme west, has a very strong current and shoals. This passage cannot be used in general because there are shallows before the mouth of the harbor. Therefore, it is difficult to enter this passage. Basilisk Passage, in the center, is

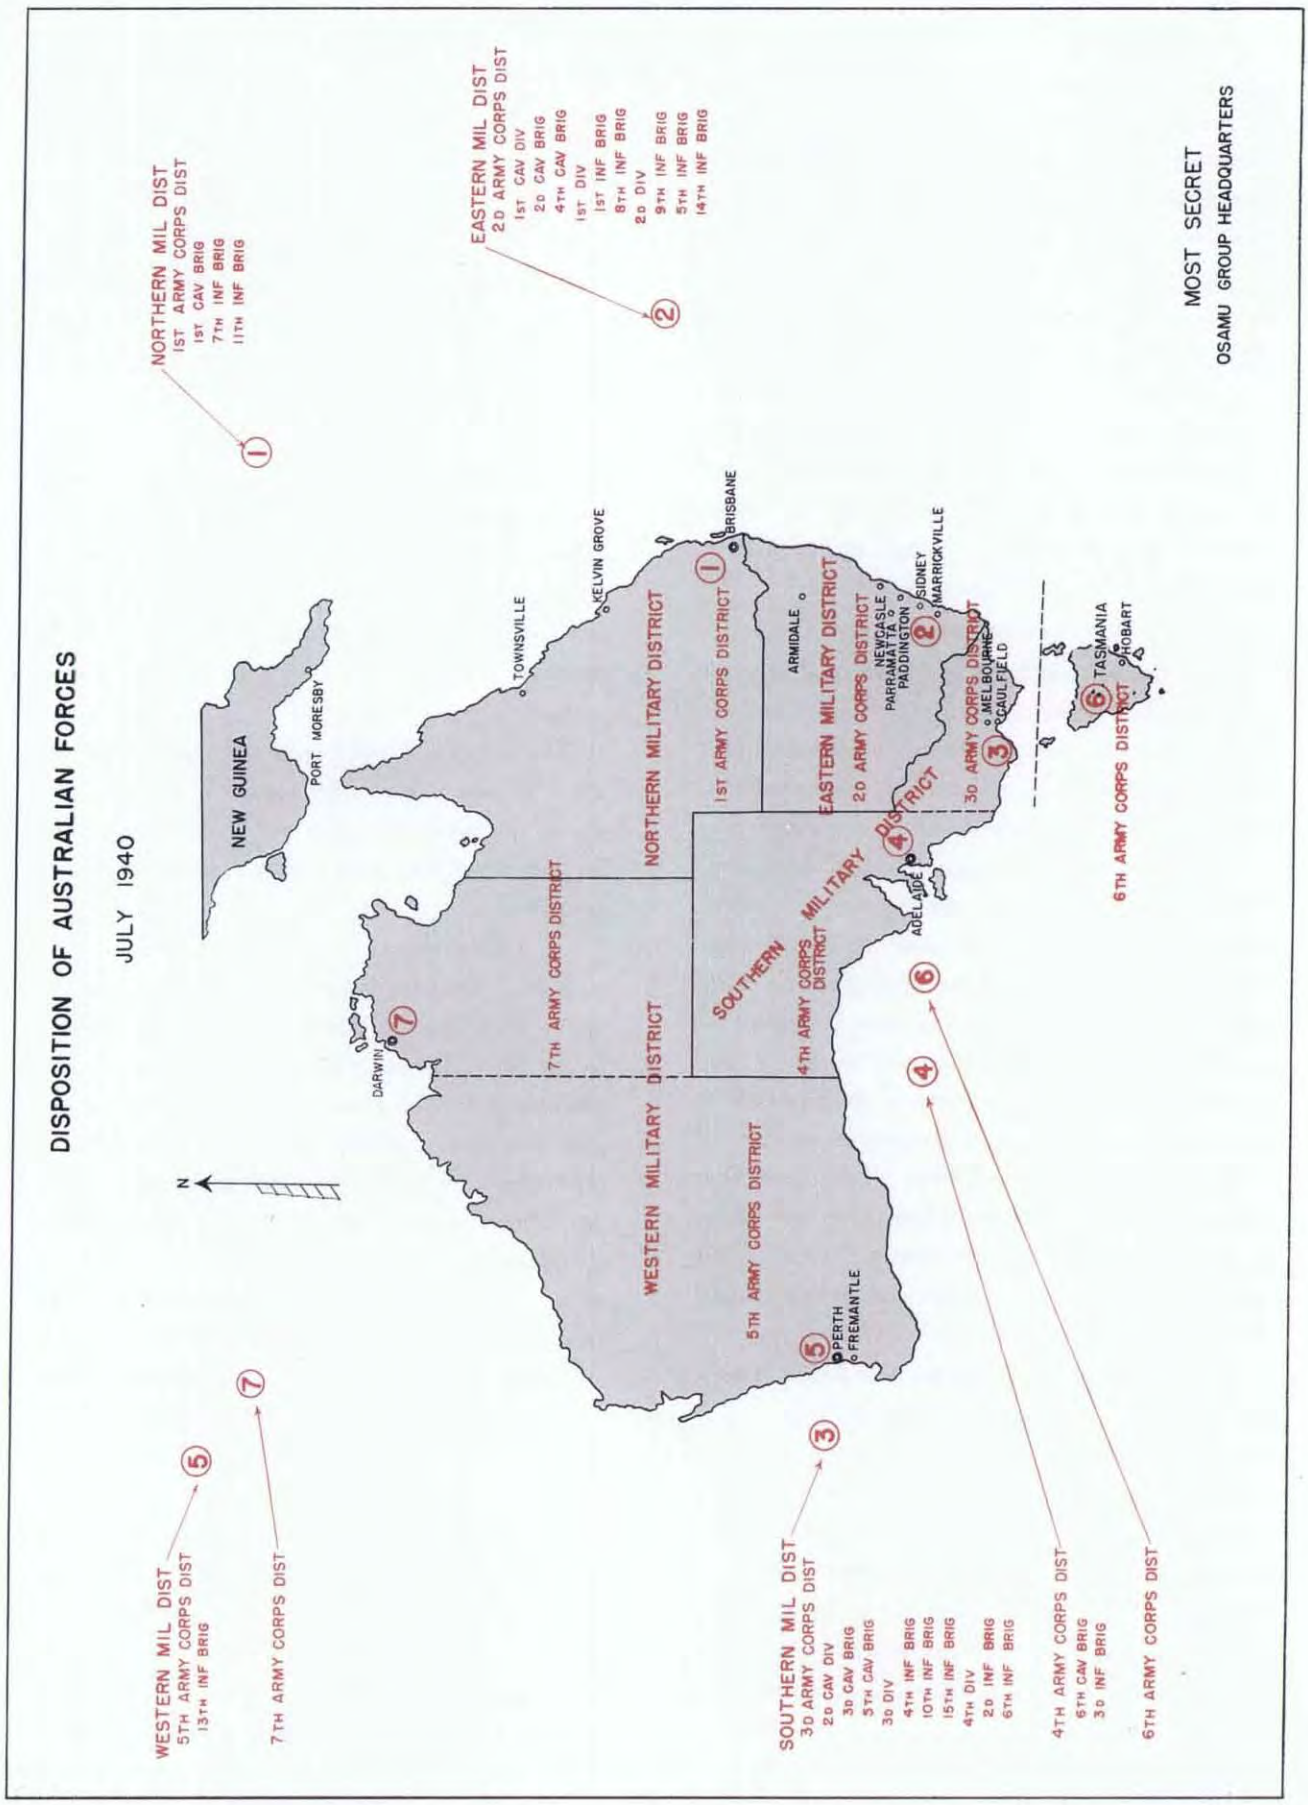

PLATE NO. 5

Disposition of Australian Forces, July 1940

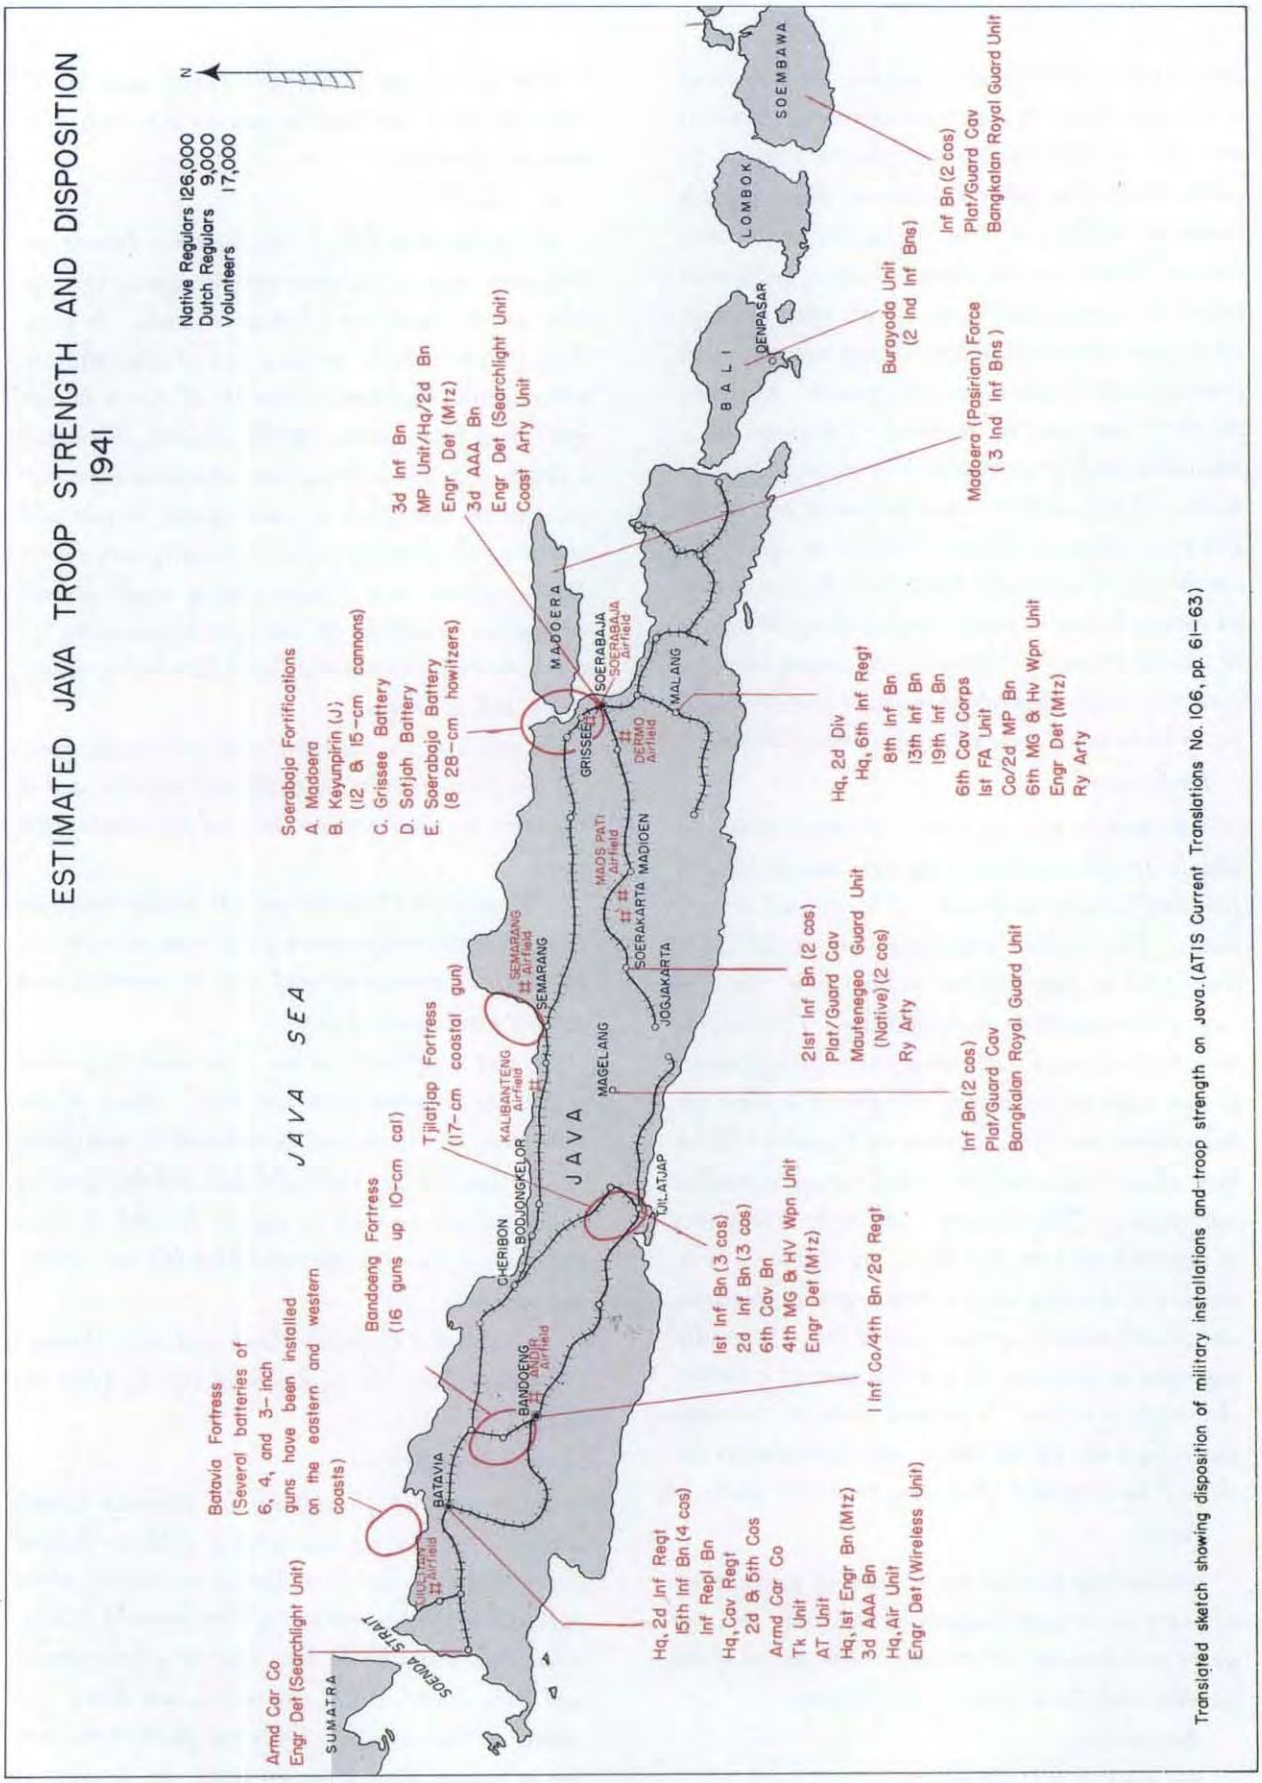

PLATE NO. 6

Japanese Estimates of Java Troop Strength and Disposition 1941

the channel used by vessels at present, but it is about 6 kilometers from the gun emplacement on Ela Hill and thus is within the guns' effective range. In general, unless the gun emplacement is destroyed, it would be difficult to enter through this channel. Padana Nahua, at the extreme east, is quite wide (about 900 meters) and is outside the effective range of the gun emplacement (about 18,000 meters). This channel should be selected for an entrance. However, all three waterways are neither very deep nor wide, and could easily be covered with mines and other obstacles. These obstacles must be cleared first of all. If a place where the Nateara and Sinavi coral reefs can be passed over with boats could be found, then an approach could be made without risking the danger of passing through the channel. Anchoring outside a coral reef is very difficult, so in such a case the transfer to boats would have to be made while drifting.

Fresh water:

This area, in general, consists of barren mountains and is dry for the period of eight months between June and January each year. The rainfall is very small. The residents who depend on rainfall sometimes have to transport water from other areas in order to maintain their means of living. The Government has constructed water storage tanks with galvanized iron roofs for use during droughts, at a place 137 meters above sea level southwest of Tuaguba Hill, in back of the city, and this water storage is used in emergencies. Their capacity is said to be several tens of thousands of tons, but this is not definite. The problem of drinking water is most urgent in this area, and the extension of a water supply line is especially important in planning the establishment of a harbor. According to rumor it is planned to bring the water down from the Laloki River, and arrangements for this will be completed about August of this year.

Fuel:

It is said that 5,000 drums of gasoline, 3,000 drums of heavy oil, a large quantity of motor oil etc., are stored in Carpenter's Warehouse. The nature of the gasoline used for airplanes is not known.

Automobiles:

For military use—about 50.

For civilian use—about 200 (no busses).

Part III—Value of Bismarck Islands and British New Guinea as air bases in case of war with Britain and America:

1. Essentials:

As explained in Part I, the Bismarck Islands are within the radius of action of bombers operating from most of our South Sea Mandated Islands. In turn, Torres Strait and the northern part of Australia are within aerial domination from the Bismarck Islands and British New Guinea, and this territory, in general, is judged to possess an important value from the standpoint of air operations in a war against Britain and America. In particular, if air superiority over Torres Strait is gained, it is thought that it wonld be advantageous in cutting off enemy communication between the Pacific Ocean and Dutch East Indies, as well as the Indian Ocean.

In regard to the possession of airfields in this area, the first principle is to use established airfields, and if necessary to construct new ones on farmland in flat areas.

The established airfields are not wholly adequate to fulfill military requirements, but some of them can be utilized immediately and can be extended with a small expenditure of labor.

As fuel is difficult to obtain in this area, in general it must be supplied from the rear. Much of the equipment for repairs and construction is inadequate.

The condition of the established airfields, landing fields and air network at present in British New Guinea is as shown in Appendix Map No. 10. (Map not attached)

2. Value of Bismarck Islands and their vicinity: (Appended Map No. 6, Reference No. 6) [Not attached]

(1) Essentials:

The established airfields in the Bismarck Islands and their vicinity are two landing fields at Rabaul and Vunakanau, and it is planned to construct others at Kavieng (northeastern end of New Ireland), Namatanai, Buka Passage (the strait separating Bougainville and Buka Islands in the Solomons), and Kieta (the capital of Bougainville). Only one place in the harbor of Rabaul is used for seaplanes, but another is located at Kileg on Galawa Island, across the Lolobo

(northeastern coast of New Britain). While the situation regarding aviation gasoline is not known, apparently almost none at all is stored. Planes operating on a regular schedule apparently refuel at Salamaua or Moresby on the return trip. There are no reports of aviation gasoline being supplied at Rabaul.

3. Value of Island of New Guinea:

(1) Essentials:

There are airfields and landing fields on the Island of New Guinea. Most of them are concentrated in Morobe Province because they are used by planes that transport gold from mines developed in the province. The airfields used mainly by land-planes are at Salamaua, Lae, Wau, Madang, Wewak, Port Moresby, etc. Salamaua and Wau are the only two airfields on which we have definite information at present. To discuss the value of the airfields in British New Guinea from the above data is futile. However, since these (the two airfields at Salamaua and Wau) are typical of those used by the regular air lines, I believe they are sound references for use in estimating the others. It seems that the only specially-constructed seaplane base is at Port Moresby.[6]

East Indies

The lengthy background of Japanese espionage and subversive activity in the Netherlands East Indies is attested by the following passage from an article entitled, "New Life of the People of Sumatra":

It was the Achin People who fought against Holland and very bravely defended their independence to the end. The Achin People are naturally fearless. Their native place is on the northern edge of Sumatra; in area it is one and a half times the size of Formosa, and it has the sea on three sides. Again, there are many mountains and geographical factors. Due to these, the natives were able to resist fiercely for 40 years following 1873. Controlled by one family, these warriors hid in the woods and often conducted violent guerrilla warfare, harassing the Dutch troops. The last ten years it was a chronicle of chivalry that the Japanese youth, Motohiko Ban, struggled hard to assist the young tribal chief, Pannamu. However, in 1922, Ban was recalled to Japan by the Foreign Office, and the Achin finally broke up their swords and submitted.[7]

An insight into more recent phases of possible Japanese espionage in the Netherlands East Indies is provided by the following excerpt from an account of the Japanese operation against Java written by an unnamed staff officer, a lieutenant colonel, and published in the Osaka Mainichi:

It was dark when we arrived at Bandoeng. Late that night, I went into a room of the old Homan Hotel, where I stayed over two years ago. . . .

For the purpose of meeting the Army Commander in the afternoon, I went to the Ifura Hotel, north of Bandoeng. I asked for the old room which I took the year before last.[8]

CHAPTER III

POLITICO-MILITARY EVOLUTION TOWARD WAR

Historical Background

The sudden, far-flung attacks unleashed by Japan's armed forces against Pearl Harbor and the Asiatic possessions of Great Britain and the United States before dawn on 8 December 1941 rang up the curtain on the Pacific War. It was to be a gigantic struggle, fought over an area covering 38 million square miles of the globe and every kind of terrain from the tundra wastes of the Aleutians to the jungles of Burma and New Guinea.

This desperate act was characterized by the enemy press as "national suicide," but the politico-military clique which gambled Japan's fate in war saw it as the only alternative to a retreat from policies and ambitions to which they stood irrevocably committed.

The Manchurian Incident of 18 September 1931 had evoked a strong reaction in the United States, expressed in repeated diplomatic protests from Washington. Great Britain aligned itself with the United States when hostilities spread to the Shanghai area in March 1932, imperilling British interests, and both nations supported China in an appeal to the League of Nations. The final League report adopted in February 1933 was so adverse that Japan, rather than yield, served notice of withdrawal from League membership.

Anti-Japanese sentiment intensified in Britain and the United States following the outbreak of the Sino-Japanese War on 7 July 1937.[1] On 1 July 1938, six months after the embarrassing sinking of the American gunboat *Panay* by Japanese Navy planes, the United States Government imposed a so-called "moral embargo" on the export of aircraft and aircraft parts to Japan. It was the initial step in a progressively more stringent economic blockade.

On 3 November 1938 Japan proclaimed the establishment of a "New Order for East Asia".[2] The United States and Britain promptly recognized this as a covert threat to China's "Open Door" and countered with loans of 25 million dollars and 50 million pounds,

---

1 The Japanese Government had endeavored in the early stages to localize the hostilities and achieve a diplomatic settlement. Marquis Koichi Kido, later Lord Privy Seal and closest adviser to the Emperor, recorded in his Diary: "Prince Konoye (then Premier) was deeply concerned over the outbreak of the Sino-Japanese hostilities and exerted every effort to terminate the Incident and prevent its expansion. I did my utmost to support his stand." *Kido Nikki: Kyokuto Kokusai Gunji Saiban ni okeru Kido Hikokunin no Sensei Kokyosho* 木戸日記：極東國際軍事裁判に於ける木戸幸一被告人の宣誓口供書 (Kido Diary: Affidavit of Defendant Koichi Kido in International Military Tribunal for the Far East) p. 34. All source materials cited in this chapter are located in G–2 Historical Section Files, GHQ FEC.

2 In his speech announcing the New Order (大東亞新秩序), Premier Ayamaro Konoye declared: "Japan does not reject co-operation with other Powers in China, or intend to damage the interests of third Powers. If such nations understand the true intentions of Japan and *adopt policies suitable for the new conditions,* Japan does not hesitate to co-operate with them for the peace of the Orient."

respectively, to the Chungking Government. The League of Nations on 20 January 1939 also proffered aid to Chiang Kai-shek.

Japanese troops occupied Hainan Island, off the South China coast, in February 1939 and at the same time closed the Yangtze to all neutral commercial shipping. On 26 July of the same year, the United States served notice of its intention to abrogate the Japanese-American Treaty of Commerce and Navigation, the trade basis upon which the two countries had operated since 1911. In December 1939 aircraft plans and equipment as well as equipment used in manufacturing high-grade aircraft gasoline were added to the list of items, export of which to Japan was forbidden.

On 30 March 1940 the Wang Ching-wei Government was formally inaugurated at Nanking in opposition to the Chungking Government. The United States promptly refused recognition of the new regime, as a Japanese "puppet," and offered Chiang another loan, this time for 20 million dollars. This was followed on 2 July with enactment of an export control law covering national defense materials, the implied intent of which was to curb the Japanese national potential.

Under this law an export license system was first applied to aircraft materials and machine tools, and was later broadened to include high-grade gasoline, high-grade lubricating oil and first class scrap iron.[3] Thereafter new items were frequently added to the list. Since Japanese domestic production of crude oil supplied but 1,887,000 barrels of the minimum of 34,600,000 barrels annually required to maintain national defense and economic life,[4] the American curb on oil exports alone was regarded in Japanese governing circles as a crippling blow to Japan's basic industry and, indirectly, to her national safety.

Drift Toward Crisis

On 22 July 1940 the second Konoye Cabinet took office and, five days later, carried out a sweeping revision of basic Japanese policies in the light of changes in the world situation.[5] This revision committed Japan:

1. *To strive for speedy conclusion of the China Incident by cutting off all assistance to Chungking from outside powers.*
2. *To maintain a firm stand toward the United States on one front, while strengthening politicalities with Germany and Italy and ensuring more cordial diplomatic relations with Russia.*
3. *To open negotiations with the Dutch East Indies in order to obtain essential materials.*[6]

Japan's anxiety to end the China stalemate was a paramount consideration. The hostilities on the Continent had bogged down and constituted a severe drain on the nation's resources. Acting under the decisions of 27 July, the Konoye Cabinet therefore concluded a

---

3 "The restrictions of exportation of scrap iron to Japan was paricularly alarmimg to all Japanese in view of the prevailing iron shortage and the production process in Japan." *Kyokuto Kokusai Gunji Saiban ni okeru Hikokunin Tojo Hideki no Sensei Kokyosho* 極東國際軍事裁判に於ける被告人東條英機の宣誓口供書 (Affidavit of Defendant Hideki Tojo in International Military Tribunal for the Far East) Doc. No. 3000.

4 Statement by Maj. Gen. Kikusaburo Okada, Chief of War Plans Section, Economic Mobilization Bureau, War Ministry.

5 The fall of France in mid-July posed the question of the fate of French colonies in the Far East, and it also heightened the belief in high military circles that Germany would successfully overwhelm Britain. The result was to strengthen the hands of those demanding a stronger policy in the South and closer ties with the Axis Powers.

6 Decision taken by a Liaison Conference of the Government and Imperial General Headquarters, 27 July 40. *Juyo Kokusaku Kettei Bunsho* 重要國策決定文書 (File on Important National Policy Decisions).

"Joint Defense Agreement" with the French Vichy Government under which Japanese troops were dispatched to northern French Indo-China, for the purpose of blocking the last remaining supply route to Chungking.[7] Foreign Minister Yosuke Matsuoka explained the limited motive of this act in a special plea to the United States Ambassador in Tokyo, but Washington countered with an added loan of 25 million dollars to Chiang Kai-shek.[8]

In the same month Japan sought relief from the American oil embargo by dispatching a special mission headed by Commerce Minister Ichizo Kobayashi to Batavia to negotiate an agreement with the Dutch East Indies, the major oil-producing country in the Far East. Ambassador Kenkichi Yoshizawa took over the negotiations from December 1940, but the parleys finally ended in failure in June 1941.[9] As a corollary, French Indo-China later failed to deliver to Japan rice and rubber in the amounts fixed by an agreement reached in May 1941.

Four days after the dispatch of troops into northern Indo-China, Japan implemented another decision of the July Liaison Conference by concluding the controversial Tripartite Military Alliance with Germany and Italy on 27 September 1940. The professed object of the alliance was to deter the United States from going to war in either the Atlantic or Pacific,[10] but whatever Japan's real motives, the pact merely increased British and American suspicion of Japanese intentions and brought on new counter-measures.

In October the United States issued a general evacuation order to all Americans within the "East Asia Co-prosperity Sphere". Since early in the year, the bulk of the United States Fleet remained concentrated in Hawaiian waters,[11] and on 13 November Britain established a new Far East Military Command in Singapore. Malaya, Burma, and Hongkong were placed under this command, and military preparations were pushed in close liaison with Australia and New Zealand.

Beginning early in 1941, Japanese fears were heightened by a series of secret staff conferences among high-level Army and Navy representatives of the United States, Britain, China, and the Netherlands. In particular, the Manila conference in April, which was attended by the Commanding General, Philippines Department (Major General George Grunert), the United States High Commissioner to the Philippines (The Hon. Francis B. Sayre), the British Commander-in-Chief for the Far East (Air Marshal Sir Robert Brooke-Popham), the Commander of the United States Asiatic Fleet (Admiral Thomas C. Hart), and the Acting Governor-General of the Netherlands East Indies (The Hon. Hubertus van Mook), was interpreted by Japan as a sign that the so-called ABCD Powers were formulating concrete plans of immediate military collaboration.

Japanese intervention in the border controversy between Thailand and Indo-China in February 1941[12] was followed three months

7 Great Britain had closed the Burma Road to supplies for Chungking on 17 July 1940, but in October reopened it in support of American policy.

8 Japanese recognition of the Nanking Government on 30 November 1940 was answered by a further United States loan to Chiang of 100 million dollars.

9 Affidavit of Tojo, op. cit.

10 Japan's diplomatic strategists also entertained the idea that Soviet Russia might be induced to join the Alliance, thereby creating a favorable preponderance of power vis-à-vis the United States and Great Britain.

11 The main body of the United States Fleet moved from San Diego to Hawaii in January 1940. On 7 May the U. S. Navy announced that it would remain at Pearl Harbor indefinitely.

12 The United States considered the "mediation" move a Japanese design to extract new concessions from both disputing parties.

later by new American and British loans of 50 million dollars and ten million pounds, respectively, to the Chungking Government. The United States further bolstered this financial aid by extending the Lend-Lease Act to cover arms shipments to China.

In April 1941 Japan realized one of its major diplomatic objectives with the conclusion of the Japanese-Soviet "Non-Aggression Pact." However, the outbreak of the Soviet-German war only two months later created an entirely new situation. The Konoye Cabinet resigned on 16 July, reassembling two days later under the same Premier but with Matsuoka, the architect of the Axis Pact, replaced as Foreign Minister by Admiral Teijiro Toyoda.[13] The new cabinet was geared to rehabilitate relations with the United States, a course which conservative Navy elements had stoutly advocated.[14]

The American Government refused to take seriously the conciliatory trend of the new government line-up since Japanese troops shortly moved into southern French Indo-China;[15] and the United States retaliated on 26 July by freezing all Japanese assets. London took similar action, also abrogating the British, Indian, and Burmese commercial treaties with Japan, and the Netherlands Government followed suit.

Japan now found its trade cut off with all areas except China, Manchuria, Indo-China, and Thailand. Economic rupture was complete with the United States, Britain, and the Netherlands, who controlled the key materials essential to Japan's national defense and industrial existence. The gradual decline of the nation's power potential was inferentially inevitable.

The stoppage of fuel imports assumed paramount strategic importance. Even if Japan were to suspend all industrial expansion and further military preparations, and to undertake an epochal increase in synthetic petroleum production, it was estimated that approximately seven years would be required before output would reach the annual consumption level of 34,600,000 barrels.[16] Meanwhile, essential industries dependent upon liquid fuels would be paralyzed within a year. In two years the Japanese Navy would be immobilized.

An international impasse was fast approaching, but Japan's leaders in August 1941 hesitated to take the final plunge.

In a war against the material power of Britain and the United States, Japan's inherent economic weakness seemed to make the risk too great. Premier Konoye, who had long

---

13 "I recommended Admiral Toyoda for the foreign portfolio because of my ardent desire to further the Japanese-American negotiations. Admiral Toyoda had served as Navy Vice-Minister, and not only was he versed in Navy affairs. . . .but he was one of those who supported the view that an American-Japanese conflict should be avoided by every means possible." *Konoye Ayamaro Ko Shuki* 近衛文麿公手記 (Memoirs of Prince Ayamaro Konoye) p. 30.

14 In a conversation with Premier Konoye shortly after the conclusion of the Tripartite Alliance in September 1940, Admiral Isoroku Yamamoto, Commander-in-Chief of the Combined Fleet, stated with regard to a Japanese-American war: "If I am told to fight regardless of the consequences, I shall run wild for the first six months or a year, but I have utterly no confidence for the second or third year. The Tripartite Pact has been concluded, and we cannot help it. Now that the situation has come to this pass, I hope you will endeavor to avoid a Japanese-American war." Ibid., p. 3.

15 This move was under a "Joint Defense Agreement" concluded 21 July between Japan and the Vichy Government. The agreement was announced in Tokyo on 26 July simultaneously with the United States freezing order. Japanese troops advanced into Saigon 28 July.

16 Notes of Maj. Gen. Kikusaburo Okada, Chief of War Plans Section, Economic Mobilization Bureau, War Minis try.

subscribed to this view,[17] decided to make a new effort to break the deadlock in the Japanese-American negotiations.[18] His Memoirs record:

During this period I racked my brains in search of some way to overcome the crisis between Japan and America. Finally I made the firm resolution to attempt a personal meeting with the President. I revealed my intention to the War and Navy Ministers for the first time on the evening of 4 August....

The War and Navy Ministers listened tensely to my resolution. They could not reply at that meeting, but later the same day the Navy expressed complete approval and voiced hope for the success of the proposed meeting. The War Minister replied by written memorandum which stated:

"....The Army raises no objections, provided however that the Premier firmly adheres to the fundamental principles of the Empire's revised proposal [to the United States] and provided that if, after every effort has been made, the President still fails to understand the Empire's real intentions, and proceeds along the present line of American policy, Japan will firmly resolve to face war with the United States."[19]

The Konoye proposal was laid before President Roosevelt on 17 August and met with an initially favorable response. However, the State Department's insistence that the meeting be held only after a prior agreement on basic principles resulted in a stalemate.[20] The sands of diplomacy were running out.

War Deliberations

Amidst this atmosphere of high tension, the Emperor on 6 September summoned the Cabinet and representatives of the Army and Navy High Command to a conference at which, for the first time, the question of peace or war was squarely posed. Deliberation centered upon an "Outline Plan for the Execution of Empire Policies" (*Teikoku Kokusaku Suiko Yoryo*), which provided:

1. *In order to guarantee the existence and defense of the Empire, preparations for an eventual war against the United States, Great Britain and the Netherlands shall be completed approximately by the latter part of October.*
2. *Concurrently with the above, the Empire will exert every effort to secure realization of its demands through diplomatic negotitations with the United States and Great Britain. [The minimum terms which Japan would accept in an agreement with the United States were set forth separately.]*
3. *In the event that these negotiations fail to achieve the Empire's demands by the early part of October, it shall immediately be resolved to go to war with the United States, Great Britain, and the Netherlands.*[21]

Speaking for both Army and Navy High

---

17 "Japan's dependence for materials, particularly war materials, on the United States and Great Britain was her one great weakness. The impossibility of overcoming this was repeatedly confirmed by researches of the Planning Board since the time of the first Konoye Cabinet. The conclusion reported was always: 'Impossible'." Konoye Memoirs, op. cit., p. 4.

18 These negotiations were initiated in April 1941, shortly after the arrival of Admiral Kichisaburo Nomura, newly-appointed Japanese Ambassador, in Washington. The talks virtually came to a standstill following Japan's move into southern Indo-China and the American freezing order.

19 Konoye Memoirs, op. cit., pp. 32, 34–5.

20 At the 17 August interview between the President and the Japanese Ambassador, Admiral Nomura, the President went so far as to mention Juneau, Alaska, and mid-October as the possible time and place for the proposed meeting. However, the formal reply handed to Admiral Nomura on 3 September "evaded a clear-cut expression of his (the President's) stand regarding the meeting and stated that Japanese agreement on fundamental principles was a pre-requisite. Here it became clear that the State Department's views had prevailed." Ibid., pp. 36, 38–9.

21 File on Important National Policy Decisions, op. cit.

行軍途上の日本軍部隊　小磯亮平畫（昭和十二年）

Original Painting by Ryohei Koiso

PLATE NO. 7

Japanese Column on the March

Commands, Admiral Osami Nagano, Chief of the Navy General Staff, backed up the plan with a warning that Japan's power to fight was steadily declining due to exhaustion of essential war materials and the increased military preparations of the ABCD Powers. Instead of "letting time slip idly by," he declared, the nation must first push its own war preparations and, if diplomacy fails, "advance bravely into offensive war operations." The statement was especially significant because it reflected the views of the Navy, the role of which would be of paramount importance in war with the United States. Essential extracts follow:[22]

The High Command sincerely hopes that the Government will exhaust every possible means of settling the present situation diplomatically. However, if Japan should be obliged to resort to war, the High Command, from the standpoint of military operations, is of the opinion that the gradual exhaustion of most of the country's essential materials such as petroleum, is lowering the national defense power, and that, if this continues, Japan in the end will fall irrevocably into a condition of impotency.

Meanwhile the United States, Britain, and other Powers are swiftly reinforcing their military establishments and strategic defenses in the Far East, and war preparations in these countries, especially in the United States, are likewise being greatly accelerated. Consequently, by the latter half of next year, the United States will be far ahead in its preparations, and Japan will be placed in an extremely difficult position.

Under such conditions, it is highly dangerous for Japan to let time slip idly by without attempting to do anything. I think that Japan should, first of all, carry out preparations as best it can; and then, if our minimum demands essential to self-defense and national existence are not accepted in the diplomatic negotiations and war finally becomes inevitable, we should not lose our opportunity but should advance bravely into offensive war operations with firm resolution, thus seeking the salvation of our country.

In regard to the outlook for such operations, it can be considered from the outset that the probability of an extended war is extremely great. Japan, therefore, must have the determination and the preparations to conduct an extended war. It would be just what we are hoping for if the United States, seeking a quick decision, challenged us with its main naval strength.

Considering the present position in the European war, Great Britain can dispatch to the Far East only a very limited portion of its naval strength. Hence, if we could intercept the combined British and American fleets in our own chosen area of decisive battle, we are confident of victory. However, even victory in such a battle would not mean the conclusion of the war. In all probability, the United States will shift its strategy to a long war of attrition, relying upon its invincible position and dominant material and industrial strength.

Japan does not possess the means, by offensive operations, to overcome its enemies and force them to abandon the war. Hence, undesirable as an extended war would be due to our lack of resources, we must be prepared for this contingency. The first requisite is immediate occupation of the enemy's strategic points and of sources of raw materials at the beginning of the war, thus enabling us to secure the necessary resources from our own area of control and to prepare a strong front from an operational viewpoint. If this initial operation succeeds, Japan will be able to establish a firm basis for fighting an extended war even though American military preparations progress according to schedule. For Japan, through the occupation of strategic points in the Southwest Pacific, will be able to maintain an invincible front. Thereafter, much will depend upon the development of our total national strength and the trend of the world situation.

Thus, the outcome of the initial operations will largely determine whether Japan will succeed or fail in an extended war, and to assure the success of the initial operations, the requisites are:

1. *Immediate decision on whether to go to war, considering prevailing circumstances in regard to relative Japanese and enemy fighting strength;*

22 Juyo Shorui Tsuzuri 重要書類綴 (File of Important Documents) preserved by Capt. Toshikazu Ohmae, member, Military Affairs Bureau, Navy Ministry.

2. *Assumption of the initiative;*
3. *Consideration of meterological conditions in the zone of operations to facilitate these operations.*

It is necessary to repeat that the utmost effort must be made to solve the present crisis and assure Japan's security and development by peaceful means. There is absolutely no reason to wage a war which can be avoided. But to spend our time idly in a temporizing moment of peace, at the price of later being obliged to engage in war under unfavorable circumstances, is definitely not the course to take in view of the Empire's program for lasting prosperity.

Although the conference finally adopted the "Outline Plan," Baron Yoshimichi Hara, President of the Privy Council, pressed for further clarification by the High Command of the apparent subordination of diplomacy to preparations for war.[23] The Emperor himself, in a rare departure from constitutional precedent, intervened to second the demand, voicing regret that the Army and Navy had not made their attitude fully clear.

With this, His Majesty took from his pocket a sheet of paper on which was written a verse composed by the Emperor Meiji:

"When all the earth's oceans are one,
Why do the waves seethe and the winds rage?"

Reading this aloud, His Majesty said, "I have always endeavored to spread the peace-loving spirit of the late Emperor by reciting this poem."

Silence swept the chamber, and none uttered a word....[24]

After this dramatic moment Admiral Nagano again rose to express "trepidation at the Emperor's censure of the High Command" and to assure His Majesty that "the High Command places major importance upon diplomatic negotiations and will appeal to arms only in the last resort."[25]

Nevertheless, failing diplomatic success within a fixed time limit, Japan now stood committed to war.

In actuality, Japanese military preparations for the "Great East Asia War" far antedated the outbreak of hostilities. Even long before the decision to fight was taken on the highest policy-making level, the Army and Navy had independently begun gathering intelligence, making clandestine aerial surveys, compiling maps, experimenting with new-type weapons

---

23 Hitherto the armed services had, at east outwardly, accepted diplomacy as the primary means of achieving Japan's objectives. In April 1941 Imperial General Headquarters had decided its Basic Policies for the South as follows:

1. The aims of the Empire's immediate policy in the South are to hasten the settlement of the China Incident and to increase the total national defense power. This requires:
   (a) Establishment of close and inseparable military, political and economic co-operation with French Indo-China and Thailand;
   (b) Establishment of close economic relations with the Netherlands East Indies;
   (c) Maintenance of normal trade relations with the other southern countries.
2. Basically, diplomatic measures will be taken to attain the above objectives.
3. In carrying out the above policies, military force will be used for our country's self-defense and existence only if no other solution can be effected when the following situations develop:
   (a) If the Empire's existence is threatened by an American, British, or Dutch embargo;
   (b) If American, British, Dutch, and Chinese encirclement of Japan becomes so serious as to overly endanger national defense. *Juyo Kokusaku Kettei no Kei Gaisetsu* 重要國策決定の經緯概說 (Summary of Circumstances Leading to Decisions on Important National Policies) Foreign Ministry and 1st and 2d Demobilization Bureaus, Jun 46.

24 Konoye Memoirs, op. cit., pp. 43–4.

25 Ibid., p. 44.

and conducting special types of training which were specifically applicable to an eventual war against the United States, Great Britain, and the Netherlands.

As early as July 1940, Japanese Army intelligence possessed detailed information regarding order of battle and troop dispositions in Australia.[26] Between 27 November and 15 December 1940, a year before Pearl Harbor, Japanese aircraft successfully carried out photographic reconnaissance of parts of northern Luzon, including the Lingayen Gulf, Vigan, and Aparri coastal areas[27] where the Philippine invasion forces were to land following the outbreak of war.

Intelligence data regarding troop and air strength, ground force dispositions, airfields, harbors and fortifications were also assembled well in advance of hostilities for Java, Sumatra, Singapore, New Guinea, and the Philippines.[28] To assure the success of the Pearl Harbor attack, special intelligence arrangements were set up to obtain accurate, up-to-date reports on the number and location of American naval units in the harbor.[29]

Midget submarines, the precursors of Japan's *tokko* (special attack) weapons,[30] had been secretly developed by the Navy as early as 1934, but as war with the United States grew imminent during the summer of 1941, experiments were rushed to completion at the Kure Naval Station in attaching these small craft to long-range mother submarines capable of carrying them to a distant zone of operations and then releasing them for attack upon designated targets. Five of these suicide craft were used for the first time in the attack on Pearl Harbor.[31]

During the late summer and fall of 1941 Japanese units destined to take part in the invasions of the Philippines, the Dutch East Indies and Malaya were put through intensive training in amphibious operations and jungle warfare along the South China coast and in special training areas near Canton, on Hainan Island, and in Indo-China. Morale pamphlets, special military manuals, and training guides all based on the assumption of war against Britain and the United States were prepared for advance distribution.[32]

Following the 6 September Imperial conference, the tempo of Japan's war preparations sharply mounted. Steps were taken to mobilize and fit out about 1,500,000 tons of shipping for Army and Navy use. At the same time the assembly of the troops and supplies required for operations against the United States, Britain

30 Japanese suicide weapons and tactics are dealt with more fully in Chapter XVII.

31 Cf. Chapter V, section on Pearl Harbor Operation.

32 A morale pamphlet entitled *Kore Sae Yomeba Kateru* これさへ讀めば勝てる (Read This And War is Won) was distributed to divisional commands in November 1941. Brief extracts follows: "The present war is a war with Japan's rise or fall at stake.... What is at the bottom of America's action in gradually prohibiting the export of oil and iron to Japan, as if to strangle her slowly by silk-wool?.... Japan has waited too long. If we are patient any longer, our aircraft, warships and motor cars will not move.... For the existence of Japan herself and her obligation under the Tripartite Alliance, not a minute longer must be endured. Japan is confronted with a great mission, as representative of the Oriental race, to bravely deliver the finishing blow against Occidental aggression of several hundred years." ATIS Research Report No. 131, *Japan's Decision to Fight*, 1 Dec 45, pp. 13–5.

and the Netherlands, and their concentration in preliminary staging areas in Japan Proper, Formosa, and South China were begun. Actual organization of the various southern invasion forces and the deployment of operational strength in the areas where hostilities were to begin, were to be carried out only after the final decision to go to war had been taken. According to the 6 September plan, this decision had to be made by mid-October.[33]

Only four days after the Imperial conference of 6 September had debated the issue of war or peace, the top-ranking staff officers and fleet commanders of the Navy assembled at the Naval War College in Tokyo to take part in the annual "war games." The problem set for the games was an invasion of the Southern area, but a restricted group of the highest officers of the Combined Fleet simultaneously studied behind barred doors technical problems involved in a surprise attack on Pearl Harbor.[34]

On 10 November, the general terms of Army-Navy co-operation in the Southern operations were agreed upon in Tokyo, and between 14 and 16 November detailed operational plans were elaborated by the Fleet and Army commanders directly concerned in a conference held at the headquarters of the Iwakuni Naval Air Group, on the Inland Sea near Hiroshima.[35]

Meanwhile, the parallel diplomatic efforts to revive the Washington negotiations made no headway. Foreign Minister Toyoda in September pressed for reconsideration by Washington of the proposed Roosevelt-Konoye conference, and the American Ambassador in Tokyo, Mr. Joseph C. Grew, strongly counselled this course in dispatches to the State Department.[36] On 2 October, however, Secretary of State Cordell Hull, in a memorandum handed to Ambassador Nomura in Washington, reiterated that general withdrawal of Japanese troops from both China and Indo-China remained a prerequisite for any Japanese-American agreement.[37]

The Konoye Cabinet, unable to agree on the course that Japan should take in view of these

33 Imperial General Headquarters, Army Section estimated that 15 October must be the deadline for the decision if war preparations were to be completed by the end of that month. Statement by Col. Takushiro Hattori, Chief, Operations Section, Imperial General Headquarters, Army Section.

34 The war games lasted from 10 to 13 September.

35 Details of Army-Navy Central Agreement and operational agreements concluded at the Iwakuni conference are given in Chapter V.

36 As paraphrased by the State Department, a dispatch sent by Ambassador Grew on 29 September 1941 stated: "The Ambassador, while admitting that risks will inevitably be involved no matter what course is pursued toward Japan, offers his carefully studied belief that there would be substantial hope at the very least of preventing the Far Eastern situation from becoming worse and perhaps of ensuring definitely constructive results, if an agreement along the lines of the preliminary discussions were brought to a head by the proposed meeting of the heads of the two Governments.... He raises the question whether the United States is not now given the opportunity to halt Japan's program without war, or an immediate risk of war, and further whether, through failure to use the present opportunity, the United States will not face a greatly increased risk of war...." Joseph C. Grew, *Ten Years in Japan*, Simon & Schuster (New York, 1944) pp. 193–4.

37 The American memorandum demanded:

1. That Japan unconditionally accept the following four basic principles:
   (a) Full respect of the territorial integrity and political sovereignty of other nations;
   (b) Non-intervention in the internal affairs of other nations;
   (c) Observance of the principle of equality, including equal opportunity in respect to trade;
   (d) Maintenance of the *status quo* in the Pacific, except where it might be modified by peaceful means.
2. General withdrawal of Japanese troops from China and French Indo-China.
3. Abandonment of exclusive economic arrangements between Japan and China. Summary of Circumstances Leading to Decisions on Important National Policies, op. cit.

conditions, resigned on 16 October, and two days later War Minister General Hideki Tojo formed a new government. Despite the mid-October deadline, Premier Tojo pledged continued efforts for a diplomatic settlement.[38] Then, on 5 November, a newly summoned Imperial conference revamped the 6 September "Outline Plan for the Execution of Empire Policies." Japan's resolution to accept war was reaffirmed; preparations therefor were to be completed by the end of November; however diplomatic negotiations were to be continued in the hope of effecting a compromise.[39]

Explaining the purport of the revised plan before the conference, Premier Tojo declared that eight Liaison conferences of the Government and Imperial General Headquarters, held between 23 October and 2 November, had reached the conclusion that war with the United States, Great Britain, and the Netherlands "was now unavoidable," and had unanimously decided to concentrate effort on war preparations, although still seeking to break the deadlock by diplomatic means.[40]

With the deadline for war now set at the end of November, speed was of the essence. The same day that the Imperial conference took place, the Navy Section, Imperial General Headquarters and Admiral Yamamoto, Commander-in-Chief of the Combined Fleet, issued orders for the fleet to prepare for the outbreak of war.[41] The following day, 6 November, the Army Section, Imperial General Headquarters fixed the order of battle of the Southern Army and directed its commanding general to move his forces to the assembly areas and points of departure for the invasion of the "southern strategic areas."[42]

On the diplomatic front the urgency was no less great. On 6 November Ambassador Extraordinary Saburo Kurusu left by air for Washington to make the final effort for a peaceful solution.[43] Without waiting for his arrival, Japan on 7 November transmitted its Proposal "A" through Ambassador Nomura, and when this was rejected, Proposal "B" for a temporary *modus vivendi* freezing war moves in the Pacific was presented by Ambassador

---

38 "I personally know that on the morning of 18 October, after agreeing to take the portfolio of Navy Minister, Admiral Shimada went to see the new Premier, General Tojo, for the purpose of stipulating a condition for his entry into the Cabinet. This condition was that diplomatic negotiations with the United States must be continued with the avowed objective of reaching a peaceful settlement of the matters in dispute. Admiral Shimada told me and several others at the Navy Ministry that Tojo had expressed complete agreement...." *Kyokuto Kokusai Gunji Saiban ni okeru Shonin Sawamoto Yorio no Sensei Kokyosho* 極東國祭軍事裁判に於ける證人澤本賴雄の宣誓口供書 (Affidavit of Witness Yorio Sawamoto, International Military Tribunal for the Far East), Doc. No. 2889.

39 The Imperial conference decided:

"1. In order to bring about a more favorable situation and ensure its defense and national existence, the Empire, with the determination to accept war with the United States and Great Britain, will complete its war preparations by the end of November. At the same time, it will endeavor to effect a compromise through diplomatic negotiations based on Proposals 'A' and 'B', dealt with separately.

"2. In the event that these negotiations fail, decision will be made immediately to go to war against the United States and Great Britain." Affidavit of Tojo, op. cit.

42 *Daihonyei Rikugun Tosui Kiroku* 大本營陸軍統帥記錄 (Imperial General Headquarters Army High Command Record) 1st Demobilization Bureau, Nov 46, pp. 22–4.

43 Ambassador Kurusu, notified only two days previously of his mission, flew to Hongkong where, by arrangement with the United States State Department, departure of a trans-Pacific Clipper was delayed to accommodate him. This haste reflected the new war deadline.

Kurusu on 20 November, three days after his arrival in Washington.[44]

It was at this crucial juncture that the Hull note of 26 November was delivered. Describing the reaction to the note in a statement made after the war, Admiral Shigetaro Shimada, at that time Navy Minister, said:

It was a stunning blow. It was my prayer that the United States would view whatever concessions we had made as a sincere effort to avoid war and would attempt to meet us half-way, thereby saving the whole situation. But here was a harsh reply from the United States Government, unyielding and unbending. It contained no recognition of the endeavors we had made toward concessions in the negotiations. There were no members of the Cabinet nor responsible officials of the General Staff who advocated acceptance of the Hull note. The view taken was that it was impossible to do so and that this communication was an ultimatum threatening the existence of our country. The general opinion was that acceptance of this note would be tantamount to the surrender of Japan.[45]

On 21 November, Imperial General Headquarters had ordered the Combined Fleet to move at the appropriate time to positions of readiness for the start of operations.[46] The various naval task forces, though subject to recall in the event of a Japanese-American agreement, left for their designated theaters of operation toward the end of November.

On 29 November a Liaison conference of the Government and Imperial General Headquarters concluded that war must be launched. Instructions were sent to Japan's ambassadors in Germany and Italy to secure commitments whereby:

1. *Germany and Italy would immediately declare war against the United States upon the outbreak of Japanese-American hostilities;*
2. *None of the three Powers would enter into a separate peace with the United States and Great Britain; and*
3. *The three Powers would not make peace with Great Britain alone.*[47]

On 1 December an Imperial conference met to ratify finally the decision to fight. It was a moment of grave solemnity when, in the presence of the Emperor, Premier Tojo rose to announce:

In accordance with the decision reached at the Imperial conference of 5 November, the Army and Navy have made full preparations for war, while the Government has continued to exert all possible effort to adjust diplomatic relations with the United States. However, the United States has not receded from its original demands. In addition, the United States, Great Britain, the Netherlands and China, in collusion, have demanded a one-sided compromise, adding new conditions such as unconditional withdrawal of our troops from China, repudiation of the Nanking Government and abrogation of the Tripartite Treaty with Germany and Italy.

If our country should yield, its prestige would be lost, and the China Incident could not be settled. More than this, the very existence of Japan would be imperilled. It is now clear that our country's claims cannot be realized through diplomatic negotiations.

Economic and military pressure by the United States, Great Britain, the Netherlands, and China is increasing. From the standpoint both of national strength and of military operations, the point has finally been reached

---

44 Proposal "A" offered: 1. Gradual withdrawal of Japanese troops from China, with the exception of garrisons in North China and Inner Mongolia, within two years after the conclusion of peace with China; 2. Withdrawal of troops from French Indo-China as soon as the China war ended. Proposal "B", in addition to calling a halt to fresh war moves in the Pacific, envisaged a limited restoration of commercial relations, including resumption of American oil shipments to Japan.

45 *Kyokuto Kokusai Gunji Saiban ni okeru Hikokunin Shimada Shigetaro no Sensei Kokyosho* 極東國際軍事裁判に於ける被告人嶋田繁太郎の宣誓口供書 (Affidavit of Defendant Shigetaro Shimada, International Military Tribunal for the Far East) Doc. No. 328.

47 International Military Tribunal for the Far East, Exhibit Doc. No. 1204.

at which the nation can no longer allow matters to go on unchanged.

Under these conditions our country is obliged to take up arms against the United States, Great Britain and the Netherlands in order to solve the present situation and to preserve its national existence. Already the China Incident has continued for four years, and today we are plunging into an even greater war. It indeed fills us with trepidation that His Majesty has been caused such grave anxiety.

However, the strength of our country is many times greater than before the China Incident. Our internal unity is stronger, and the morale of the officers and men of the Army and Navy is higher. I am firmly convinced that, with the entire nation unified in determination to die for the country, we shall break through this national crisis.[48]

The Imperial conference then formally resolved "to open hostilities against the United States, Great Britain, and the Netherlands as a result of the failure of the Japanese-American negotiations and in accordance with the Outline Plan for the Execution of Empire Policies decided on 5 November."[49]

On the basis of this decision, Imperial General Headquarters on the same day ordered the Commanding General of the Southern Army to start invasion operations on 8 December,[50] and on 2 December orders were issued to the Commander in Chief, Combined Fleet fixing the same date for the commencement of attacks by the Navy.[51]

On 6 December a Liaison conference of the Government and Imperial General Headquarters decided that Ambassador Nomura should be instructed to deliver Japan's final note ending the Japanese-American negotiations at 1:00 p.m. 7 December, Washington time, 30 minutes before the scheduled launching of the attack on Pearl Harbor.[52]

At 10:30 p.m. 7 December, with hostilities only five hours away, the United States Embassy in Tokyo received from the Washington State Department a triple-priority code dispatch instructing the Ambassador to transmit "at the earliest possible moment" a personal message from President Roosevelt to the Emperor urging efforts "to restore traditional amity and prevent further death and destruction in the world."[53] This dispatch, though stamped by the Japanese Government Telegraph Office as having been received at 12:00 noon,[54] was delivered with a 10½-hour delay.[55] After it had been decoded, Ambassador Grew personally handed the message to Foreign Minister Shigenori Togo at 12:30 a.m., 8 December, and the latter presented it to the Emperor in an extraordinary

audience at 3 : 00 a.m.[56]

Even as the Emperor read the President's plea to seek ways "of dispelling the dark clouds", the first wave of planes from the Japanese task force north of Oahu was nearing the target, and at precisely 3 : 25 a.m. the first bombs rained on Pearl Harbor.[57] The machinery of war was irrevocably in motion.

In Tokyo, at 11 : 40 on that day, the solemn notes of the national anthem warned anxious radio listeners that an important announcement was impending. Then the voice of Premier Tojo, reading the Imperial Rescript declaring war,[58] reached a stunned and silent nation. The broadcast ended with the strains of a martial song, "*Umi Yukaba,*" its words grimly expressive of the fatalism with which the nation went to war.

Across the sea,
Corpses in the water;
Across the mountain,
Corpses heaped upon the field;
I shall die only for the Emperor,
I shall never look back.[59]

56 Between 0030 and 0240, when he proceeded to the Imperial Palace, Foreign Minister Togo had the President's message translated and made arrangements for the special audience through the Imperial Household Minister and the Lord Privy Seal. He also took the translation to Premier Tojo at about 0200 before going to the Palace, where the audience lasted from 0300 to 0315. Affidavit of Togo, op. cit.

CHAPTER IV

BASIC STRATEGY AND MILITARY ORGANIZATION

Strategy for a Long War

It was obvious to Japan's military strategists that the Pacific War would be a long one. The superior fighting potential of the United States made it improbable that Japan could inflict a crushing defeat on its adversary at the outset. The tremendous distances involved rendered a direct attack on the American mainland impracticable; finally, Japan not only had the United States to contend with, but Great Britain and the Netherlands as well.

Equally obvious was the certainty that possession of the natural resources for war would become a decisive factor. Japan did not have these raw materials within its own territory, and foreign sources of supply were blocked. The supply of liquid fuel, for example, was practically limited to the quantity on hand, and stockpiles were barely adequate for two years of armed conflict.

The first objective of Japan's strategy, therefore, was the conquest of the rich colonial areas in the South, whose vital resources added to those within the Japanese Empire, Manchuria, and Occupied China would provide a firm economic basis for waging an extended war.[1]

The fleet was assigned the vital task of blocking superior enemy naval power and supporting ground-force invasion operations.

In view of the handicap resulting from the pre-war ratio of 7.5 to 10 between the Japanese and American fleets, it was considered that the American fleet must be crippled by a surprise blow at the outbreak of war, giving Japan mastery of the sea long enough to attain its strategic objectives in the Western and Southwest Pacific. With American air and sea power temporarily crushed, and vital American and British bases, as well as the Netherlands Indies, in Japanese hands, it was estimated that Japan could carry on the war successfully for another two years, provided the fleet sustained no serious losses.

Once the initial objectives were taken, Japan would possess an outer defense perimeter extending from Burma through Sumatra, Java, Timor, Western New Guinea, the Caroline and Marshall Islands, and Wake. The vast sea areas within this perimeter, except for the Solomons—New Guinea—Philippines line, were generally favorable to the establishment of a strong strategic inner defense. (Plate No. 8) Within this zone, the Japanese fleet, especially its carrier forces, supplemented by land-based air strength, would be able to operate at great advantage, provided the United States and Britain were unable to build up their air strength sufficiently to swing the balance in their favor.

As regards land operations, it was estimated that the Army, if successful in its initial operations, would be able to secure and maintain its hold on the occupied areas. An anticipated

British counterattack against Burma could be successfully withstood by utilizing favorable terrain features and furnishing reinforcements when necessary. The southern areas, China, Manchuria, and Japan Proper would be strongly garrisoned, and as long as the destruction of Japanese shipping could be held within reasonable bounds,[2] profitable exploitation of the occupied territories was deemed possible. With all the needed raw materials at its disposal, Japan's economic and military capacity to carry on the war could be guaranteed for about two years.

Beyond that date, however, a number of unpredictable factors made it impossible for Imperial General Headquarters to plan with certainty. The relative position in regard to armaments, fleet strength, and air power three years hence could not be accurately foretold. What changes would Japan's material power and morale undergo? Every shift in the world situation, especially in the European War, would have profound repercussions in the Pacific. These great imponderables rolled up like a stormy wave, making it impossible to see ahead beyond the first two years of war.

Manpower and Materials

Aside from strategic problems, Japan's war planners devoted special attention to three principal elements which conditioned the nation's over-all fighting strength. These were manpower, raw materials, and transportation, especially shipping.

Paradoxically, as far as manpower was concerned, the very over-population which was one of the pressure factors behind Japanese expansionism now became a factor in Japan's favor. Japan Proper, covering an area of only 381,000 square miles, supported in 1940 a population of 73,114,000.[3] The population, for the past ten years, had been increasing at the rate of 800,000 to one million annually. With this reserve of manpower, immediate mobilization demands could be met easily, and the needs of industry could be filled throughout an extended war.

War-weariness had increased appreciably during the later years of the China Incident. But confronted by the new and graver challenge of a life-or-death struggle against the United States, Great Britain, and the Netherlands, the Japanese people could be expected to rise to the test. Japan's leaders entertained no doubt that traditional loyalty and obedience would keep the people's morale from breaking even under the strain of a long war.

As for raw materials, Japan expected to be practically self-sufficient in coal, iron, and industrial salts within the Japanese-Manchurian-Chinese bloc, if adequate marine transportation could be assured. Kyushu, Hokkaido, Sakhalin, and North China were the main sources of coal for general use. Coal for steel production came chiefly from Sakhalin, Manchuria, and North China. North and Central China could be counted on for iron ore, while industrial salts were available in Korea, Manchuria, North China, and Formosa.

The annual production of steel was approximately 5,000,000 tons. The overall steel plan for 1941 was as follows:

Production goal:	4,760,000 tons
Navy Allotment:	950,000 tons
Army Allotment:	900,000 tons
Ordinary consumption:	2,910,000 tons

These estimates were revised in November

PLATE NO. 8

Japan's Basic Strategy, December 1941

1941 to conform to a decrease in production and an expected increase in Navy requirements in the event of war. The new figures were:

Production goal:	4,500,000 tons
Navy Allotment:	1,100,000 tons
Army Allotment:	790,000 tons
Ordinary consumption:	2,610,000 tons

Of the 2,610,000 tons allotted for ordinary consumption, it was planned to allocate 300,000 tons to the shipbuilding industry on a priority basis, in order to achieve a ship construction goal of 600,000 tons annually.[4] It was estimated that, if the Southern campaign succeeded, it would be possible to carry on a long war with a steel program of these proportions.

The shortage of liquid fuel was Japan's Achilles heel. The combined output of natural and synthetic oil did not exceed 3,459,000 barrels annually. War needs must be drawn mainly from reserves, at least until the oil-producing territories in the south could be occupied, developed, and fully exploited.

Allowing for the possibility that the oil wells in the southern area might be totally destroyed before they fell into Japanese hands, the Government and Imperial General Headquarters developed a supply plan which would barely meet estimated war requirements:[5]

Supply: (in thousand barrels)

Stock pile: 52,836

Domestic production:

	1st year	2nd year	3rd year
Crude oil	1,573	1,258	1,887
Synthetic oil	1,887	2,516	3,145
Total	3,460	3,774	5,032

Production in the southern areas:

	1st year	2nd year	3rd year
Borneo	1,887	6,290	15,725
Sumatra	——	6,290	12,580
Total	1,887	12,580	28,305

Demand:

	1st year	2nd year	3rd year
Military	23,902	22,644	21,072
Non-military	8,806	8,806	8,806
Total	32,708	31,450	29,878

Balance: (exclusive of minimum reserve of 9,435,000 bls)

1st year	2nd year	3rd year
16,040	944	4,403

Included in Japan's liquid fuel reserves as of 1 December 1941 were 6,919,000 barrels of aviation gasoline. The production program called for 503,200 barrels during the first year, 2,075,700 barrels during the second year, and 3,396,600 during the third year of the war. Wartime requirements were computed at 4,500,000 to five million per year, and plans were drawn up on the basis of these figures. The margin of safety was so slight, however, that considerable difficulty was anticipated in the second and third years.[6]

To meet Japan's domestic requirements for staple food, 397 million bushels of rice must be available annually. The rice supply plan for 1942 called for domestic production of 298 million bushels, the balance of 99 million bushels to be made up by imports from Korea, Formosa, Thailand, and French Indo-China. Transports returning empty from the zone of operations would be utilized to make up any shortage of non-military shipping. If, due to military operations, imports from Thailand and French Indo-China fell short of the estimated 50 million bushels counted upon from the two countries combined, soy beans,

4 Memorandum Report submitted by Lt. Gen. (ret.) Teiichi Suzuki, President of the Planning Board, at the Imperial conference of 5 Nov 41. Preserved in the Notes of Maj. Gen. Kikusaburo Okada, Chief of War Plans Section, Economic Mobilization Bureau, War Ministry.

5 Ibid.

6 Ibid.

sweet potatoes and miscellaneous grains grown in the Homeland, Korea, Formosa and Manchuria would be used to make up the deficit.[7]

Although shortages of a few special materials like cobalt and high quality asbestos were anticipated, control of the southern supply areas and the speedy development of occupied China[8] were expected to produce a steady supply of important materials such as bauxite, raw rubber, raw materials for special steels, metals, non-ferrous metals, leather, cotton, hemp, and oil. This plan, however, depended entirely upon the maintenance of adequate marine transportation, and Imperial General Headquarters realized fully that this factor would prove a decisive one in the Pacific War.

Shipping

In November 1941, Japan's total shipping amounted to 6,720,000 gross tons, including motor sailboats over 100 tons. Of these, serviceable ships aggregated 5,980,000 gross tons, including 360,000 gross tons of oil tankers.[9]

It was estimated that the level of imports required by the "Materials Mobilization Plan of 1941" could be maintained during hostilities, provided a minimum of three million gross tons of shipping was reserved at all times for non-military use. With this tonnage, approximately five million tons of materials could be transported monthly, even if wartime shipping efficiency dropped by 15 to 20 per cent. Actually, the monthly average of tonnage transported during the first half of 1941 corresponded to this estimate, but since military requirements continued to tie down 2,800,000 tons of shipping long after the Southern operations had entered a relatively inactive phase, the reservation of three million tons of ships for non-military use became a difficult problem.

In view of the vital importance of shipping, Imperial General Headquarters had given careful consideration to probable war losses and replacement construction plans. The Navy estimated that losses would aggregate 800,000 gross tons during the first year, 600,000 the second year, and 700,000 the third year. Imperial General Headquarters, however, estimated that losses during the first year of the war would amount to between 800,000 and one million tons,[10] and that subsequently losses would decline.[11] On this basis, decision was made to build 1,800,000 gross tons of new ships over a three-year period, an average of 600,000 tons annually.[12]

Japan's private shipbuilding capacity at the start of war was approximately 700,000 gross

7 Ibid.

8 Extract from report of Chief of Staff of Izeki Force, North China, 25 August 1941: "Due to the present international situation and the increase in national military preparations, the importance of exploiting and utilizing the resources of this area must be considered. The accumulation of these military supplies will be subdivided into procurement by military authorities and purchases by civilian agencies. The items to be acquired by civilians are copper ore, copper wire scrap, copper scrap, brass scrap, cases, melted cases, tin, coin, pewter, and antimony ore.

"Scrap iron in North China will be acquired by the Nippon Iron Industries Company. Other resources to be acquired are nickel, cobalt, tungsten ore, molybdenum ore, copper, lead, zinc, quicksilver, high grade asbestos, high grade mica, nonferrous metals, steel, and other minerals.

"An investigation squad organized by the army has reported the probable presence of iron, sulphur, fluorspar and zinc in the vicinity of Yancheng and of iron in Suehchuanling." ATIS Bulletin No. 1555, 5 Nov 44.

9 Notes of Maj. Gen. Okada, op. cit.

10 Ibid.

11 Statement by Maj. Gen. Okada, previously cited.

12 Notes of Maj. Gen. Okada, op. cit.

tons, limited by an engine building capacity sufficient to power only 600,000 tons. In order to achieve the required goal of 600,000 tons of new ships annually, the Government planned to allot a yearly ration of 300,000 tons of steel, plus copper and other essential metals, to the shipbuilding industry, to lower shipbuilding standards, to institute thoroughgoing Navy control of all stages of construction from raw materials to finished ships, and to take steps to assure an adequate labor supply.[13]

To maintain the level of shipping needed for nonmilitary use, the Army had to restrict the number of requisitioned ships to a minimum, regardless of the effect on military plans and operations. Imperial General Headquarters fixed the limits of requisitioned tonnage for Army and Navy use as follows:[14]

	(Gross tons)
Army:	
1st to 4th month:	2,100,000
Fifth month:	1,700,000
Sixth month:	1,650,000
Seventh month:	1,500,000
Eighth month:	1,000,000
Navy:	
Monthly:	1,800,000
(Including 270,000 tons of tankers)	

In other words, the Army's needs in requisitioned ships would be at their peak during the first four months of the Southern operations and thereafter were expected to decrease gradually until a constant level of one million tons was reached. After September 1942, it was estimated that a total of 2,800,000 gross tons would satisfy the combined requirements of both Army and Navy.[15] Shipping requirements were figured so closely that any upward revision in Army demands might upset the balance of the war program. It was therefore agreed that neither service could boost its shipping allotment without reference to the Liaison conference of the Government and Imperial General Headquarters.

Areas To Be Occupied

The primary decision which Imperial General Headquarters was called upon to make in the development of Japan's war plans was the delimitation of the areas to be occupied by the military forces. Economic and strategic considerations were uppermost in shaping this decision.[16]

First, from the standpoint of military strategic necessity, the United States must be expelled from the Philippines[17] and its island

13 Ibid.

14 Ibid.

15 Statement by Capt. Toshikazu Ohmae, Chief, Operations Section, Imperial General Headquarters, Navy Section, and Col. Takushiro Hattori, Chief, Operations Section, Imperial General Headquarters, Army Section.

16 Data regarding Imperial General Headquarters decision on areas to be occupied furnished by Rear Adm. Sadatoshi Tomioka, Chief, First Bureau (Operations), Imperial General Headquarters, Navy Section, and Col. Hattori, previously cited.

17 Post-war interrogations of former Japanese military and naval leaders conclusively establish the vital strategic importance of the Philippines in Japan's 1941 war planning.

(1) The Japanese Navy, which already had plans for Pearl Harbor, felt that it was necessary to attack the Philippines at the same time to insure the success of our operations. The Navy felt that war with the United States was inevitable, and that to by-pass the Philippines would seriously hamper naval operations. The Philippines were a distinct threat as a base on the Navy's flank." Interrogation of General Hideki Tojo, Premier and War Minister 1941–4.

(2) The Philippines were included within the scope of operations in the southern area because of their strategic importance and not for any political or economic reason. During the first half of 1941 when the Southern operations were being studied, the Army and Navy did not at first agree on the inclusion of the Philippines in the invasion plans. As a result of joint research conducted by the Operations Sections of the Army and Navy, the Army agreed to invade the Philippines at the beginning of the war. (Statement by Col. Hattori, previously cited).

bases at Guam and Wake captured, while Britain's important Far Eastern bastions at Singapore and Hongkong must likewise be placed under Japan's control. These strategic positions were the key to the control of important areas. To protect Singapore, Burma must also be taken.

Second, in order to secure the economic resources required for the prosecution of a long war, Java, Sumatra, Borneo, the Celebes, and Malaya must be successively occupied.

Third, seizure with small military forces of important points in the Bismarck Archipelago, centering on Rabaul, was also decided upon in order to protect the important Japanese naval base of Truk, but no definite plan was made for the invasion of New Guinea.

The areas enumerated would give Japan a strong strategic position in conjunction with the existing Japanese island possessions from the Marshalls west through the Carolines and Marianas.

Estimate of Allied Strategy

The Army and Navy General Staffs made a shrewd appraisal of the possible lines of action open to the Allied Powers. This estimate was as follows :[18]

1. The Allies would attempt to isolate Japan politically and economically. At the same time, they would step up aid to Chiang Kai-shek in order to hold as many of Japan's effective forces immobile on the Continent as possible.

2. The United States and Great Britain would try to delay Japan's penetration of the southern areas by reinforcing their own air and sea power in the Philippines-Singapore areas and by holding these strategic bases as long as possible. The main body of the United States fleet also might, depending upon the trend of the early operations, attempt a trans-Pacific thrust, presenting the possibility of a decisive sea battle. Allied air and sea forces would harrass Japanese sea traffic with guerrilla tactics to interfere with lines of communication.

3. When their mobilization was finally completed, the Allies would attempt a large-scale counter-offensive with air, sea, and ground forces, preparatory to a decisive naval battle. The United States would probably launch its counteroffensive from the southern and middle Pacific, where there were good sites for air bases. An offensive mounted across the Northern Pacific seemed unlikely because of unfavorable weather conditions. Should an American offensive be launched early in Japan's southern campaign, the chances were that it would be from the Central Pacific.

4. In the event that the United States and Great Britain elected to avoid decisive battle early in the war, they would probably limit themselves for the time being to submarine and air attacks on Japanese supply lines. At the same time they would endeavor to secure their communication lines with Australia and India with a view to the eventual use of these territories as bases for the start of a counteroffensive.

5. In all likelihood, Great Britain would be forced to employ the bulk of its strength in Europe, and would play a minor role in the Pacific operations. However, it could not be predicted with certainty whether the United States would elect to throw its main strength first against Japan or against the Axis

(3) In all planning, taking the Philippines was considered imperative because of their strategic position as an American base. The Navy planned to take the Philippines in order to eliminate the United States naval base there, thus forcing the United States Navy to operate from far distant bases. The Philippines lay athwart the line of communications to the south, and it was necessary to remove this threat. It was military common sense that the Philippines had to be taken in the initial attack. The Philippines were an economic burden to Japan. The Planning Board knew this in advance. Nor were there any political motives for the Philippines attack. It was purely for strategic military reasons...to eliminate the threat of American advance bases on the Japanese line of communications to the southern regions of Indonesia, Malaya, etc. Statement by Rear Adm. Tomioka, previously cited.

18 Statements by Col. Ichiji Sugita, Staff Officer (Intelligence), Imperial General Headquarters, Army Section, and Rear Adm. Tomioka and Col. Hattori previously cited.

Powers in Europe. Japanese strategists, after carefully weighing the possibilities, estimated that first priority would be given to Europe.

6. The United States and Great Britain, already counting Chiang Kai-shek as an ally, would undoubtedly attempt to bring the Soviets into the war.

Timing of the Attack

With the decision to fight taken and the areas to be occupied defined, the next vital question facing Imperial General Headquarters was the selection of the most propitious moment for opening the hostilities.[19]

In a war to be waged with inferior forces against three enemy countries, it was deemed absolutely essential that Japan exploit to the fullest the advantage of choosing the moment to strike and seizing the initiative from the start of the operations. Were Japan to wait passively until war finally resulted from a step-by-step process of deterioration, Imperial Headquarters estimated that loss of the initial tactical advantage would make it impossible to attain the basic Japanese strategic objectives.

It was estimated that, if war were not started before March 1942, economic inferiority would be such as to preclude any hope of success.

In order to guard against the remote possibility of an attack by the Soviet Union while Japan would be heavily engaged in the south, it was considered advisable to start hostilities early enough so that the Southern operations would be near completion before the end of the winter, during which a Soviet attack from the north would be unlikely.

In view of the steady tightening of defensive arrangements among the ABCD Powers, particularly joint Anglo-American defense arrangements in the Malaya and Philippines areas, it was deemed advantageous to start hostilities at an early date.

Assuming that the fleet would take the "Great Circle" route to attack Pearl Harbor, navigational and weather conditions would be extremely unfavorable after January. Similarly, navigational conditions off Malaya would become unfavorable in January and February.

To facilitate air and landing operations, it was advisable to select a date during the last-quarter moon.

To achieve a successful surprise attack operations should begin on Saturday or Sunday.[20]

In accordance with the decisions taken by the Imperial conference of 6 September,[21] the High Command first planned to launch hostilities early in November. Then, with the revision of these decisions by the 5 November Imperial conference,[22] the anticipated opening of hostilities was postponed until early December. The final decision on the date of the attack was held in abeyance until the outcome of the Japanese-American negotiations became clear.

Following the Imperial conference of 1 December, which finally ratified the decision to fight, 8 December (Sunday, 7 December in Hawaii and the United States) was fixed by Imperial General Headquarters as the date for the start of the war.

Central Command Organization[23]

With the outbreak of the China Incident

19 Section on "Timing of the Attack" is based on data prepared by Rear Adm. Tomioka and Col. Hattori, previously cited.

20 The Japanese correctly appraised the social and convivial implications of the American "week-end".

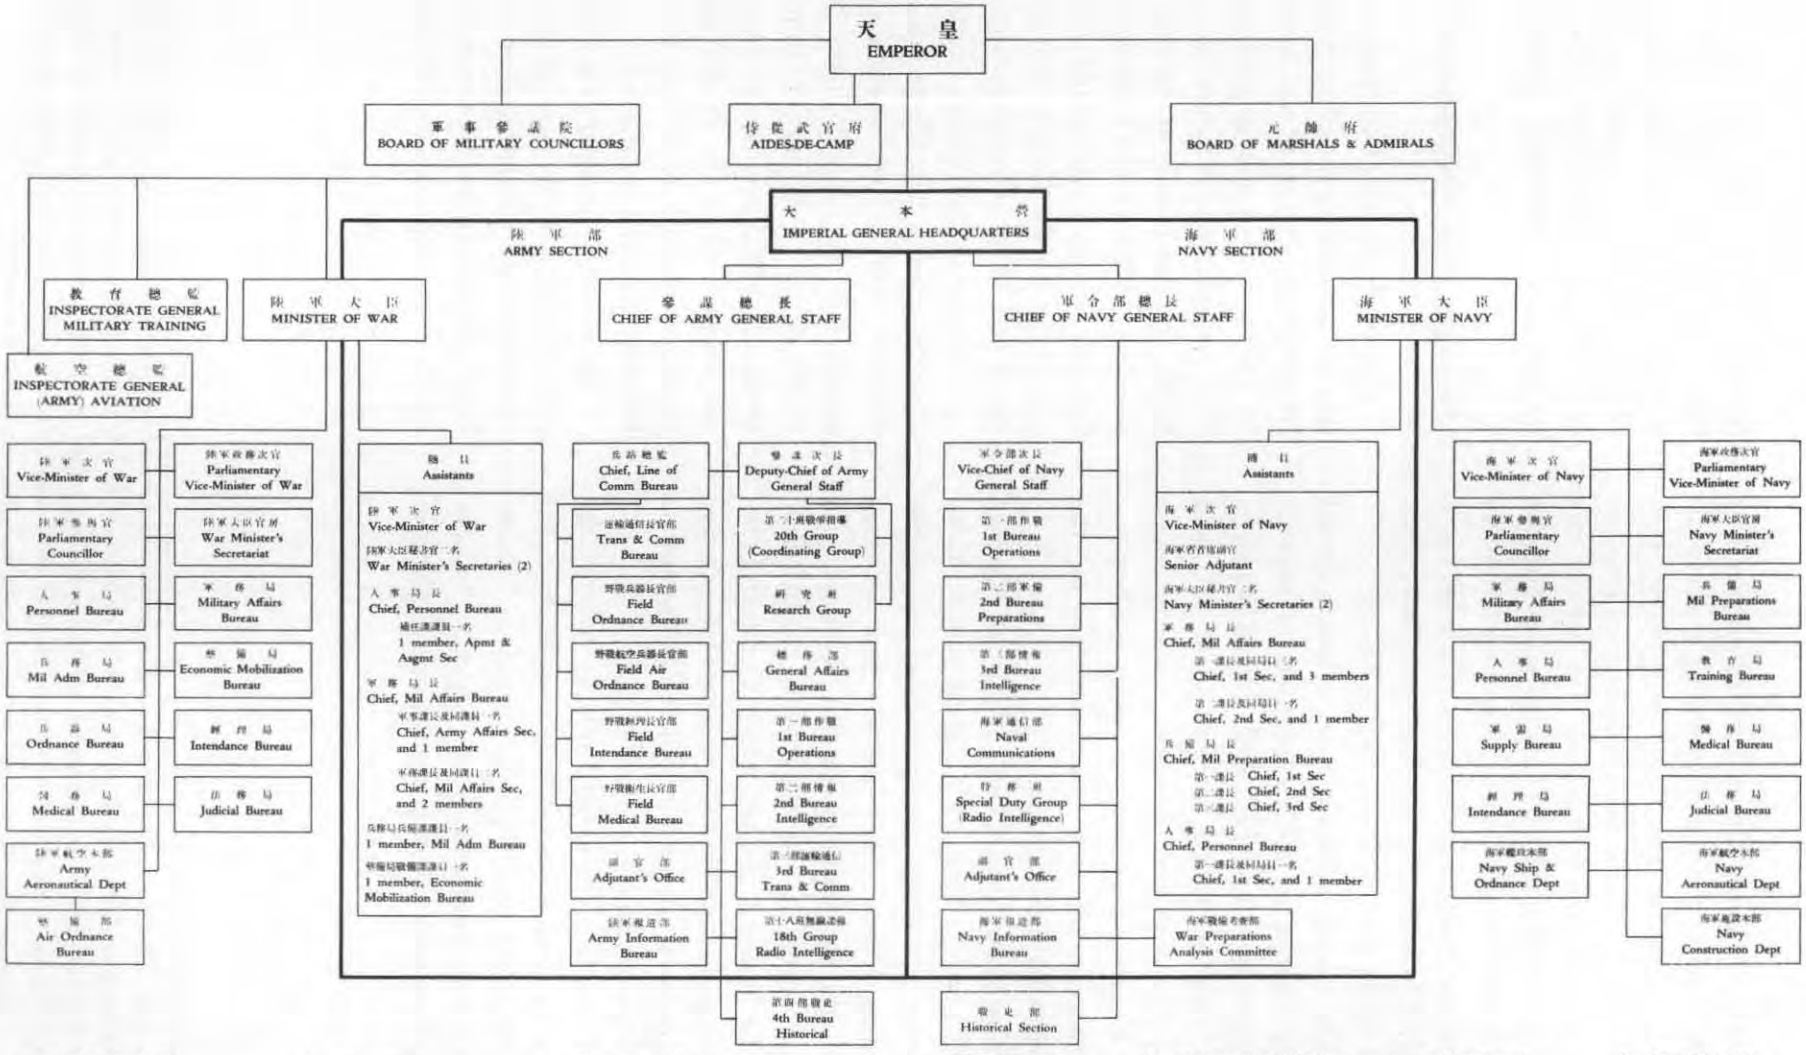
陸海軍中央指揮組織
CENTRAL COMMAND ORGANIZATION

（一九四一年十二月八日）
8 DECEMBER 1941



（此ノ陸軍ノ職ハ左記ノ職ト兼任）
In the Army, the following were dual positions:

(a) 參謀次長（兵站總監）
Deputy-Chief of Army General Staff
(a) Chief, Line of Communications Bureau

(b) 第三部長（運輸通信長官）
Chief, 3rd Bureau-Transportation & Communications
(b) Chief, Transportaion & Communications Bureau

(c) 兵器局長（野戰兵器長官）
Chief, Ordnance Bureau
(c) Chief, Field Ordnance Bureau

(d) 航空本部技術部長（野戰航空兵器長官）
Chief, Air Ordnance Bureau
(d) Chief, Field Air Ordnance Bureau

(e) 經理局長（野戰經理長官）
Chief, Intendance Bureau
(e) Chief, Field Intendance Bureau

(f) 醫務局長（野戰衛生長官）
Chief, Medical Bureau
(f) Chief, Field Medical Bureau

PLATE NO. 9

Central Command Organization

in 1937, Imperial General Headquarters was established as the central directing and coordinating organ of the Army and Navy High Commands. This body was divided into the Army and Navy Sections, in which the Chiefs of General Staff of both services and the chiefs and selected subordinates of the more important bureaus and sections of the War and Navy Ministries and the Army and Navy General Staffs were included. (Plate No. 9)

The Board of Militay Councillors, a special body created in 1887, comprised of selected generals as well as the Board of Field Marshals and Fleet Admirals, composed of all field marshals and fleet admirals, were to advise the Emperor on matters of great military importance, and were also available to the services for consultation.

The Army and Navy Chiefs of General Staff were the Emperor's highest advisers in all matters involving the operational use of the fighting forces. Such matters did not pass through the Premier or the Cabinet. In other words, it was the special characteristic of the Japanese military High Command that it enjoyed complete independence from control by political organs of the Government in military matters.

To unify political and military strategy during war and promote closer co-ordination, the Government and High Command, in November 1937, established the Imperial General Headquarters-Government Liaison Conference. Members ordinarily included the Premier, Ministers of War, Navy, and Foreign Affairs, and the Chiefs of the Army and Navy General Staffs. Decisions arrived at by this body were to be implemented by the responsible military or governmental agency.[24]

Strength And Organization Of Forces

Originally, Japan's basic policy was to maintain its controlling position in the Far East. Its armament, therefore, was developed mainly for use in its own and neighboring territories. The two potential enemies were the United States, a naval power on the east, and Russia, a military threat on the Continent to the west. For this reason, Japan could not subordinate one service to the other, and maintained an Army and Navy of equal strength.

Although both services made tremendous advances during the China Incident, a great disparity still existed between their strength and that of the United States Navy and the Soviet Army. Armament building and operational plans had been scaled to a conflict with one enemy before the Pacific War. Military operations against more than two nations had hitherto not been considered.

Japan had no independent Air force. Each service possessed its own air arm. After the outbreak of the China Incident in 1937, Japan began expanding its Air forces. Growing realization of the importance of air power as proved

24 The Liaison conference convened only when necessary until November 1940, when meetings began to be held twice weekly at the Premier's official residence. In July of the following year, after Germany invaded Russia, the members agreed to make more active use of the Council, and the meeting place was then changed to the Imperial Palace. Following the establishment of the Koiso Cabinet in July 1944, the Council was newly designated as the "Supreme War Direction Council," but its functions remained unchanged.

by active operations stimulated this expansion.[25] The late start of the program, however, made it impossible to build up an air strength of planes of advanced design in the amount considered desirable before the beginning of the Pacific War. The Army Air forces had been operating with planes of short or medium range. Development of long range aircraft had not been emphasized.

At the time of its organization, the Japanese Army had been modeled first on the French and then on the Prussian Armies. From experience gained in the Russo-Japanese War, however, and profiting by the lessons of World War I, Japan adopted a unique system of organization, tactics, and training suitable to the requirements for operations in East Asia.

Following the outbreak of the Manchurian Incident, the potential enemy was obviously the Soviet Union. To oppose superior Soviet forces training emphasized offensive operations, individual courage, and proficiency in all branches of military science. Fire power and mechanization were not, however, stressed.

During the six years' interval between the Manchurian and China Incidents, military personnel strength was enormously increased, and further augmentation between 1937 and 1941 brought the total strength up to 51 divisions at the outbreak of war.[26] However, due to a lack of raw materials and limited budgets, little new equipment of improved design was issued. The Chinese forces, poorly trained and equipped, offered little stimulus to efficiency, and as a result Japanese staff officers grew slack as hostilities dragged on, and the whole standard of training deteriorated.

As the political situation vis-à-vis the

PLATE NO. 11

Navy Chain of Command

United States deteriorated, emphasis was shifted from preparation for war with the Soviets. This change was immediately reflected in Japanese combat tactics, and special training was begun for war against the United States and Great Britain.

The combat services were barely able to maintain sufficient armament to equip those forces already stationed overseas. Consequently, Japan Proper was short of air defense installations. There were practically no modern air defenses in the major cities, and air defense training never progressed beyond the point of arousing the people to become aware of passive precautionary measures.

The Navy, modeled on the British system at the time of its organization, had evolved a distinct Japanese form of its own following the Sino-Japanese War a decade later. Its primary mission until about 1935 had been to maintain command of the Western Pacific Ocean.

The Washington Naval Treaty limited the capital ship strength of the Japanese Navy to 60 per cent of that of the British and American fleets. Adequate defense of the country posed the problem of meeting a numerically superior naval force if the American Navy were concentrated. As a result, Japanese naval strategy, prior to World War II, was based on the concept of intercepting the American fleet while the latter was en route to attack in Far Eastern waters.

Along with this basic concept of strategy, the Japanese Navy developed its own special battle tactics which stressed the use of large high-speed submarines and night attacks by destroyers. Since naval thinking continued to be based largely on the idea of fleet engagements at sea, undue emphasis was laid upon first-line combat vessels, with relative disregard for the small-type auxiliaries needed for amphibious operations.

Lack of adequate funds, raw materials, and industrial power forced the Navy to curtail its construction plans considerably. The optimistic view that small-type vessels and amphibious equipment could easily be produced in wartime through accelerated shipbuilding proved absurd. The beginning of the war found the Japanese Navy with a strength of 68 per cent of that of the United States in first-line combat ships. However, in small-type auxiliaries, Japan had only 156 ships totalling 490,364 tons (38.5 per cent) as compared with 1,273,469 tons for the American Navy.

In December 1941 the Japanese Navy comprised 391 ships of all types, aggregating 1,466,177 tons. These included ten battleships (301,400 tons), ten aircraft carriers (152,970 tons), 38 cruisers (257,655 tons), 112 destroyers (165,868 tons), 65 submarines (97,900 tons), five seaplane tenders (58,050 tons), and five submarine tenders (33,445 tons). During the hostilities, new ship construction and conversion added to the fleet two 64,000-ton battleships (*Yamato* and *Musashi*), nine aircraft carriers, six escort carriers, six cruisers, 63 destroyers, 126 submarines, and 615 auxiliaries. The *Yamato* and *Musashi*, commissioned 16 December 1941 and 5 August 1942 respectively, were the world's largest and most heavily armed capital ships, carrying guns of 45-centimeter (17.7 inches) caliber.[27]

27 Statistics compiled by 2d Demobilization Bureau, Japanese Government.

CHAPTER V

INITIAL OFFENSIVES

Planning of Invasion Operations

Japan's initial strategy, as outlined earlier, was formulated with the dual purpose of gaining swift control of the economic resources of the southern regions, essential to the prosecution of the war, and of eliminating British and American military bases which barred the way to these resources and might be used as counter-offensive springboards against Japan.[1]

The primary objectives of the initial Japanese operations, therefore, involved the invasion of the Philippines, Malaya, Borneo, and the Netherlands East Indies, with particular emphasis on the seizure of Manila and Singapore, the two major bases of the United States and Great Britain in the Far East. The Pearl Harbor attack, although held essential by dominant Navy opinion to assure Japanese supremacy at sea for the execution of the Southern Operations,[2] was, in fact, a secondary and supporting operation.

The magnitude of these operations, unprecedented in military history, gave rise to difficult planning problems. Intensive studies were carried out by Imperial General Headquarters to determine the sequence of operations and the allocation of the limited ground, sea, and air strength available so as to ensure local superiority of forces in the areas of attack.

During the initial planning stage, two alternative sequences for the invasion operations were considered: (1) Philippines, Netherlands East Indies, Malaya; and (2) Malaya, Netherlands East Indies, Philippines. However, after full study, Imperial General Headquarters concluded that it would be most advantageous to exploit the psychological element of surprise to the utmost. The proposed sequences were therefore scrapped, and it was decided to attack the Philippines and Malaya simultaneously with the Navy's surprise blow at Pearl Harbor on the first day of war. Seizure of Borneo, the Celebes, Sumatra, and Java was to follow under a schedule which divided the "First Phase"

1 All source materials cited in this chapter are located in G–2 Historical Section Files, GHQ FEC.

2 Prior to 1941 Japanese naval war planning had not envisaged offensive operations as far east as Hawaii. Naval strategy against the United States called for the capture of the Philippines and Guam, depriving the American fleet of its operating bases in the Western Pacific, and then awaiting attack in Japan's sphere of naval superiority. In 1941, however, plans had to be revised to meet the possibility of war against both the United States and Britain. In September 1941 Admiral Yamamoto, Commander-in-Chief of the Combined Fleet, began advocating a new plan calling for an attack on Pearl Harbor, designed to cripple the American fleet at the start of hostilities. This, he argued, was essential to give Japan control of the Western Pacific for the period necessary to carry out operations in the Southern Area. The plan, however, met strong opposition by the Operations Bureau, Imperial General Headquarters, Navy Section on the ground that it was too risky and would divert too much fleet strength from the Southern Operations, compromising their success. After Admiral Yamamoto had threatened to resign his command unless the plan were adopted, it was finally approved by Admiral Osami Nagano, Chief, Navy General Staff, Imperial General Headquarters, Navy Section, on 20 October. (Statement by Rear Adm. Sadatoshi Tomioka, Chief, First Bureau (Operations), Imperial General Headquarters, Navy Section)

(*Dai-ichi dan* 第一段) operations into the following three periods:

First Period: Invasion of the Philippines, Malaya, Borneo, Celebes, Timor, northern Sumatra, and key points in southern Sumatra (Palembang) and the Bismarck Archipelago.

Second Period: Invasion of Java and occupation, at the opportune time, of airfields in southern Burma.

Third Period: Pacification of occupied areas and, depending on the situation, completion of operations in Burma.[3]

Although no fixed time limits were set for the completion of operations in the various areas, Imperial General Headquarters estimated that the major part of the invasion operations could be completed in 50 days for the Philippines, 100 days for Malaya, and 150 days for the Netherlands East Indies.[4]

Tactical procedures varied according to the enemy situation and Japanese capabilities in the different areas of attack. In the Philippines, General MacArthur's air strength, which Japanese intelligence indicated was undergoing gradual reinforcement, was a potential threat to the Japanese invasion fleet of slow-speed transports.[5] Hence it was decided to precede the landing of ground troops with intensive air attacks, executed jointly by Army and Navy air units, with the objective of paralyzing enemy air power.[6] In the Malayan invasion, for which high-speed transports less vulnerable to air attack were reserved, it was planned to start landing and air operations almost simultaneously.

Three particularly thorny problems presented themselves to Imperial General Headquarters in working out this plan of widely dispersed operations:

1. Whether Japanese Army and Navy air strength, operating from 300-mile distant bases in southern French Indo-China at the extreme limit of land-based fighter plane radius, would be able to provide effective cover for the landing forces against relatively superior British air power.

2. Whether air bases acquired through the occupation of Borneo and Malaya could be immediately and effectively exploited in the ensuing operations against Sumatra and Java.

3. Whether the vital oil-producing areas could be taken before the wells and installations had been seriously damaged.

The first and second problems were the self-imposed consequence of the allocation of virtually the entire carrier strength of the Combined Fleet to the Pearl Harbor operation. To ensure minimum air cover for the Malaya landings, fighter units of the 3d Army Air Group in Indo-China had to be considered wholly expendable,[7] and possibly heavy damage to the escorting naval units of the Southern Expeditionary Fleet was also accepted as a calculated risk. The second problem was met by the decision to push the speedy occupation of strategically located air bases in Borneo and

Gen, Shinichi Tanaka, Chief, First Bureau (Operations), and Col. Takushiro Hattori, Chief, Operations Section, both of Imperial General Headquarters, Army Section.

4 Ibid.

5 Fastest troop transports were assigned to the Malayan invasion, leaving only the slower ships for the Philippines operation. (Statement by Col. Ichiji Sugita, Staff Officer (Intelligence), Imperial General Headquarters, Army Section)

6 "The method of attack for the Philippines differed from that for the Malaya area. In the former operation, an air offensive to annihilate enemy air strength was to be carried out first, after which advance troops would capture enemy air bases and finally the main forces would be landed." Southern Army Operations Record, op. cit., p. 25. Cf. Chapter VI.

7 Hasty construction of an airfield on Phuquoc Island, off the southwest coast of Indo-China, during the first part of November 1941, helped to extend slightly the range of Indo-China based fighter planes. From this field

Malaya, and to effect their prompt restoration to operational use by the Japanese Air forces.

To insure acquiring the needed oil resources intact, plans were laid to capture the main oil-producing centers in Dutch and British Borneo soon after the start of hostilities, and as soon as air bases had been taken in Malaya, to take Palembang by airborne assault.[8]

Operational Strength

In the autumn of 1941, when preparations began for the Southern Operations, the total strength of the Japanese Army stood at 51 divisions, of which 28 were assigned to operations in China and 13 stationed in Manchuria and Korea for defense against the Soviet Union. Only ten divisions remained in the homeland, five of which were newly-formed and of questionable fighting ability. The Army Air Forces had approximately 1,500 first-line planes.

Of this total strength, owing to commitments in China and inability to risk weakening defense against the Soviet Union, Imperial General Headquarters decided that not more than 11 divisions and two air groups (approximately 700 planes) could be allotted to the Southern Operations. The Navy, for the accomplishment of its double mission of supporting the land invasions and attacking Pearl Harbor, was in a position to employ almost the entire strength of the Combined Fleet, including the bulk of the naval air force of 1,669 planes.[9] The maximum transport and supply shipping tonnage which could be made available for Army and Navy use was approximately 3,900,000 tons.[10]

Despite the apparent weakness of these forces in relation to the vast scope of the projected operations, Imperial General Headquarters estimated that its invasion plans would succeed. The combined troop and air strength of Great Britain, the United States, and the Netherlands in the planned theater of operations was estimated at approximately 370,000 men and 720 planes,[11] with a naval strength of approximately 12 to 16 battleships and five or six aircraft carriers. However, this potential fleet strength was dispersed, with the main elements stationed in the Indian Ocean and at Hawaii.[12]

Military intelligence reports on the target areas in September 1941 indicated that the bulk of the ground strength mentioned above was composed of colonial troops of inferior quality. Taking this into consideration, Imperial General Headquarters estimated that

---

fighters were able to cover the landings of the main Malaya invasion forces at Singora and Pattani, in southern Thailand, but effective cover for the diversionary landing at Kota Bharu, farther south, remained difficult. ATIS Enemy Publications No. 278, *Malaya Campaign 1941–1942*. 11 Jan 45, p. 10.

8 Palembang, besides its importance as a major oil-producing center, was also strategically valuable as an advance air base to be used in the subsequent operations against Java.

9 Cf. Chapter IV, p. 54.

10 Statement by Maj. Gen. Kikusaburo Okada, Chief, War Plans Section, Economic Mobilization Bureau, War Ministry. Cf. Chapter III.

11 Regular Army strength was estimated at about 232,000, the remainder consisting of volunteer and native troops. Plane strength was estimated by area as follows: Malaya, 200 plus ; Burma, 50 ; Hongkong 10 ; Philippines, 160 plus; Netherlands East Indies, 300. *Daihonyei Rikugun Tosui Kiroku* 大本營陸軍統帥記錄 (Imperial General Headquarters Army High Command Record) 1st Demobilization Bureau, Nov 46, pp. 37–41.

12 The United States was believed to have eight battleships and three aircraft carriers at Hawaii, while British strength was estimated at two battleships in the Malaya area and two to six battleships and two or three aircraft carriers in the Indian Ocean area (including East and Southeast Africa). United States Strategic Bombing Survey, *Japan's Struggle to End the War*. Appendix A, p. 18.

success could be assured by maneuvering available Japanese military strength so as to develop a three-to-one local superiority of forces in all invasion sectors.[13]

Achievement of this superiority required adherence to a carefully determined invasion schedule and the double use of troops and shipping in successive operations. Thus, it was decided that forces and shipping assigned to the Philippines, Hongkong, Guam and Malaya operations would be used again in succeeding operations.[14] The Burma operations were to be carried out by troops diverted from other combat zones where they were no longer needed.

To provide the 11 divisions called for by the invasion plans, five divisions were diverted from the China front, and six were taken from the homeland. These were further reinforced by the addition of the bulk of the Kwantung Army's service troops, which were withdrawn from Manchuria.[15] The main strength of the 3d Air Group was detached from the China Expeditionary Forces, and the main strength of the 5th Air Group was taken from Manchuria. Both were reorganized to include the best air units from China, Manchuria, and Japan Proper.

Just before the outbreak of hostilities, the tactical grouping and disposition (Plate No. 12) of Army forces allocated to the Southern Operations were as follows:[16]

Southern Army:	*General Headquarters in Saigon, French Indo-China*	
14th Army:	*Army Headquarters*	*in Formosa*
Philippines Attack Force	*Army troops (65th Brig. & other elements)*	*in Formosa*
	48th Division (main elements)	*in Formosa*
	16th Division in Amami-Oshima	
	Remaining elements in Pescadores and Palau	
15th Army:	*Army Headquarters*	*in S. Indo-China*
Burma Attack Force	*Elements 55th Division*	*in S. Indo-China*
	Army troops	*in N. Indo-China*
	55th Division (less elements)	*in N. Indo-China*
	33d Division in Central China	
16th Army:	*Army Headquarters*	*in Japan Proper*
East Indies Attack Force	*2d Division*	*in Japan Proper*
	Elements 56th Division (56th Mixed Inf Group) in Palau	
25th Army:	*Army Headquarters*	*on Hainan Island*
Malaya Attack Force	*5th Division*	*on Hainan Island*
	Imperial Guards Division in S. Indo-China[17]	
	18th Division in Canton	
	Army troops in Formosa	
Army reserves:	*21st Division in North China*	
	56th Division (main elements) in Japan Proper	
3d Air Group:	*5 fighter groups*	*in South China and N. Indo-China*
Malaya Attack Force	*4 light bomber groups*	*in South China and N. Indo-China*
	4 heavy bomber groups	*in South China and N. Indo-China*
	2 reconnaissance groups	*in South China and N. Indo-China*

13 Data on Imperial General Headquarters planning prepared by Lt. Gen. Tanaka, and Col. Hattori, previously cited.

14 Plans for the Philippines operation called for the transfer of the 48th Division, after the fall of Manila, to the South for employment in the invasion of Java.

15 The 5th, 18th, 21st, 33d, 38th and Imperial Guards Divisions were taken from China, and the 2d, 16th, 48th, 55th and 56th Divisons from Formosa and Japan Proper.

16 Statement by Col. Hattori, previously cited.

17 The Imperial Guards Division was temporarily transferred to the Fifteenth Army for initial operations (pacification of Thailand) but was then restored to the Twenty-fifth Army for participation in the Malaya campaign.

5th Air Group:	*2 fighter groups*	
Philippines	*2 light bomber groups*	*in S.*
Attack Force	*1 heavy bomber group*	*Formosa*
	1 reconnaissance Unit	

China Expeditionary Forces: *General Headquarters in Nanking*

23d Army:	*Army Headquarters*	*in*
Hongkong	*38th Division*	*Canton*
Attack Force		

Guam Occupation Force: *Directly under Imperial General Headquarters*

South Seas	*Detachment Headquarters*	*in Bonin Islands*
Detachment:	*144 Inf. Regt*	
	1 artillery battalion	
	Other elements	

The Imperial General Headquarters decided that virtually the whole of the Navy's "outer combat force"(外戰部隊)[18] would be employed in the operations against the United States, Great Britain, and the Netherlands. The tactical grouping of this force and mission assignments in the initial operations were as follows:[19]

Combined Fleet

Main Body: *Under direct command C-in-C, Combined Fleet.*
Mission: To support overall operations.
6 battleships, 2 aircraft carriers, 2 light cruisers, 1 destroyer.

Task Force: *Under C-in-C, 1st Air Fleet.*
Mission: To attack the American Fleet in the Hawaii area and subsequently support operations of the South Seas and Southern Forces.
6 aircraft carriers, 2 battleships, 2 heavy cruisers, 1 light cruiser, 11 destroyers, 3 submarines.

Advance (Submarine) Force: *Under C-in-C, 6th Fleet.*
Mission: To reconnoiter Hawaiian waters in advance of Pearl Harbor attack, cooperate with Task Force in execution of attack, and attack enemy naval forces along west coast of the United States.
27 submarines, 1 submarine tender, 1 coastal defense ship.

South Seas Force: *Under C-in-C, 4th Fleet.*
Missions: To occupy Wake; defend and patrol inner South Seas area and protect surface traffic; cooperate with the Army in the successive occupation of Guam and Rabaul.

Southern Forces: *Under over-all command of C-in-C, 2d Fleet.*
Missions: To destroy enemy fleet and air strength in the Philippines, Malaya, and Dutch East Indies areas; act as surface escort and support landings of Army forces in Philippines, Malaya, Borneo, and Thailand; prepare for invasion operations in the Dutch East Indies, Timor, and Burma.

Main Body: *Under direct command C-in-C, 2d Fleet.*
2 battleships, 2 heavy cruisers, 10 destroyers.

Philippines Force: *Under C-in-C, 3d Fleet.*
1 aircraft carrier, 5 heavy cruisers, 5 light cruisers, 29 destroyers, 4 torpedo boats, 4 minesweepers, 3 base forces.

Malaya Force: *Under C-in-C, Southern Expeditionary Fleet.*

18 The Japanese Navy employed this term to cover combat forces for employment in operations outside Japanese home waters, as distinguished from the "inner combat force" (內戰部隊) which operated only in home waters.

PLATE NO. 12

Disposition of Japan's Military Forces Prior to Outbreak of War

	5 heavy cruisers, 3 light cruisers, 15 destroyers, 16 submarines 1 minelayer, 1 coastal defense ship, 1 naval air flotilla, 2 base forces.
Air Force:	*Under C-in-C, 11th Air Fleet. 2 naval air flotillas (shore-based), 2 destroyers.*
Submarine Force:	*Under Commander, 5th Submarine Flotilla. 2 submarines, 1 submarine tender.*
Northern Force:	*Under C-in-C, 5th Fleet. Missions: To patrol and defend waters east of Japan Proper; defend the Bonin Islands; guard the route of the Task Force; protect surface traffic. 2 light cruisers, 1 destroyer, 2 torpedo boats, 1 shore-based air group, 1 base force.*
China Seas Fleet:	*Under C-in-C, China Seas Fleet. Missions: To continue operations in China and destroy local enemy forces; cooperate with the Army in taking Hongkong; protect surface traffic in Chinese coastal waters; cooperate with ground forces. 2 coastal defense ships (old-type heavy cruisers), 1 light cruiser, 3 destroyers, 6 torpedo boats, 13 gunboats, 5 base forces, 4 Special Naval Landing Parties.*

Operations Orders

The basic orders directing the Army and Navy forces to prepare for hostilities in early December were issued by Imperial General Headquarters immediately following the 5 November Imperial conference which fixed the end of November as the final deadline for the decision on war in case of failure to achieve a diplomatic settlement.[20]

The Imperial General Headquarters Navy Directive No. 1, issued on 5 November, ordered the Commander-in-Chief, Combined Fleet, to prepare "for the eventuality that war with the United States, Great Britain, and the Netherlands may become unavoidable in the first part of December."[21]

It directed that the necessary forces be assembled "at the appropriate time at initial staging areas", and laid down the general plan of fleet operations, which was incorporated in Combined Fleet Top Secret Operations Order No. 1, issued on the same date.[22] Essential portions of this order follow:

Preparations for War and Start of Hostilities

1. Preparations for War

a. The Empire anticipates the outbreak of war with the United States, Great Britain, and the Netherlands. When it has been decided to complete over-all operational preparations, an order will be issued setting the approximate date (Y-Day) for the commencement of operations and announcing "First Preparations for War." The various forces will, upon receipt of this order, act as follows:

20 Cf. Chapter III.

21 ATIS Research Report No. 131, *Japan's Decision to Fight*, 1 Dec 45, p. 75.

22 The original text of Combined Fleet Top Secret Operations Order No. 1 was recovered from the Japanese cruiser Nachi, sunk in Manila Bay, in April 1945. Translated in full in ATIS Limited Distribution Translation No. 39 (Part VIII), 4 Jun 45, pp. 2–54. The contents of Combined Fleet Top Secret Operations Order No. 1 had been worked out during October, but it was not drawn up in final form until Admiral Yamamoto and his staff were summoned to Tokyo early in November in anticipation of the Imperial conference decision. The order numbered approximately 120 pages and was reproduced in 700 copies.

(1) *All fleets and naval units, without special orders, will be organized according to the allocation of forces for the First Period Operations of First Phase Operations, and will complete battle preparations. At the appropriate time, as directed by their commanders, they will proceed to alert (待機) areas prior to the start of operations.*

(2) *All units will be sharply on the alert for possible attacks by American, British and Dutch forces.*

* * * * *

b. When the necessary advance forces for the execution of operations are dispatched to the areas of operations, "Second Preparations for War" will be ordered. The various forces will, upon receipt of this order, act as follows:

(1) *Submarine forces attached to the Advance Force, Task Force, Commerce Destruction Force,*[23] *Southern Force, and South Seas Force will, at the appropriate time as directed by their commanders, leave for their respective areas of operations.*

(2) *The remainder of these Forces will, as directed by their commanders, proceed so as to be in designated positions for the start of hostilities.*

* * * * *

2. *Start of hostilities*

a. The date for the start of hostilities (X-Day) will be fixed by Imperial Order (to be issued several days in advance). After 0000 hours on X-Day, a state of war will exist.[24] *All forces will commence operations according to plan.*

* * * * *

First Phase Operations

1. *Operational Plan*

a. The Advance Force, Task Force, South Seas Force, Northern Force, and Main Body will operate against the American Fleet.

The Advance Force [will scout and carry out surprise attacks on enemy naval forces in the Hawaii area and on the west coast of the United States.]

The Task Force [will attack and destroy enemy naval forces at Hawaii at the start of hostilities.][25]

The South Seas Force will occupy or destroy enemy key points in the vicinity of its operational area[26] *and prepare to meet enemy naval forces in the Australian area.*

The Northern Force will be charged with patrolling against the Soviet Union.

b. The Southern Forces, while holding local superiority, will annihilate enemy naval forces in the Philippines, British Malaya, and Netherlands Indies areas, and will carry out the following operations in cooperation with the Army.

(1) *Operations against British Malaya and the Philippines will be launched simultaneously. The initiative will be taken in launching a sustained air offensive against enemy air and naval forces in these areas, and Army advance expeditionary groups will be landed as quickly*

---

23 The "Commerce Destruction Force", a subsidiary unit of the Combined Fleet, consisted of only three converted cruisers.

24 In case of a serious enemy attack before X-Day, the Combined Fleet Top Secret Operations Order No. 1 stipulated that "forces attacked will counterattack immediately." It further directed that military force might be used after "Second Preparations for War" had been ordered, (1) "if American, British or Dutch ships or planes approach the vicinity of our territorial waters and their action is deemed to constitute a danger"; (2) "if our forces operating outside the vicinity of our territorial waters encounter positive actions by American, British or Dutch forces such as endanger our forces." ATIS Limited Distribution Translation No. 39 (Part VIII), op. cit., p. 5.

25 As a special precaution to guard the secrecy of the Pearl Harbor attack plan, the bracketed portions were left blank in the printed text of the order and were communicated verbally only to a restricted number of high Navy General Staff officers and staff officers of Combined Fleet, First Air Fleet and Sixth Fleet Headquarters. Statement by Rear Adm. Tomioka, previously cited.

26 Separate Table 1 of the Combined Fleet Top Secret Operations Order No. 1 specified that the South Seas Force would "invade Wake and Guam" and would also "invade Rabaul if the situation warrants" during the first period of hostilities. ATIS Limited Distribution Translation No. 39 (Part VIII), op. cit., p. 45.

as possible in strategic areas of Malaya, the Philippines and British Borneo. Air forces will be moved forward and air operations intensified.

(2) Following the successful completion of these operations, the main bodies of the Army invasion groups will be landed in the Philippines and Malaya and will quickly occupy these areas.

(3) During the first period of operations, strategic points in the Celebes, Dutch Borneo, and southern Sumatra will be occupied. If favorable opportunity arises, strategic points in the Moluccas and Timor will also be taken, and necessary air bases established in these areas.

(4) As these air bases are completed, Air forces will gradually be moved forward, and enemy air strength in the Java area will be destroyed. When this has been accomplished, the main body of the Army invasion group will be landed and will occupy Java.

(5) After the capture of Singapore, strategic points in northern Sumatra will be taken, and operations will be carried out at the appropriate time against Burma to cut the enemy supply route to China.[27]

The basic Fleet order quoted above was followed on 7 November by Combined Fleet Top Secret Operations Order No. 2, which fixed Y-Day, the approximate date for the start of hostilities, as 8 December and ordered "First Preparations for War".[28] A further order of the same date ordered the Task Force to assemble at Tankan Bay, in the Kuriles, and take on supplies until 22 November.[29]

On 21 November Imperial General Headquarters Navy Order No. 5 directed the Commander-in-Chief of the Combined Fleet to advance the necessary forces at the appropriate time to positions of readiness for the start of hostilities. At the same time Imperial General Headquarters Navy Directive No. 5 stipulated that these forces should immediately be ordered to return to home bases in the event of a Japanese-American agreement.[30] A Combined Fleet operations order issued on 25 November stated:

The Task Force will move out of Tankan Bay on 26 November and, taking every precaution to conceal its movements, will advance by late evening of 3 December to a rendezvous point at 42 degrees N. 170 degrees W., where refueling will be speedily carried out.[31]

Following the Imperial conference decision to go to war, Imperial General Headquarters Navy Section on 1 December issued an order to the Commander-in-Chief, Combined Fleet, which stated:

1. The Empire of Japan has decided to open hostilities against the United States, Great Britain, and the Netherlands during the first part of December.

2. The Combined Fleet will destroy enemy naval and air forces in the Far East and will repulse and destroy any enemy naval forces which may come to the attack.

3. The Commander-in-Chief, Combined Fleet, will cooperate with the Commander-in-Chief, Southern Army, in executing swift attacks on American, British, and Dutch strategic bases in East Asia and in oc-

---

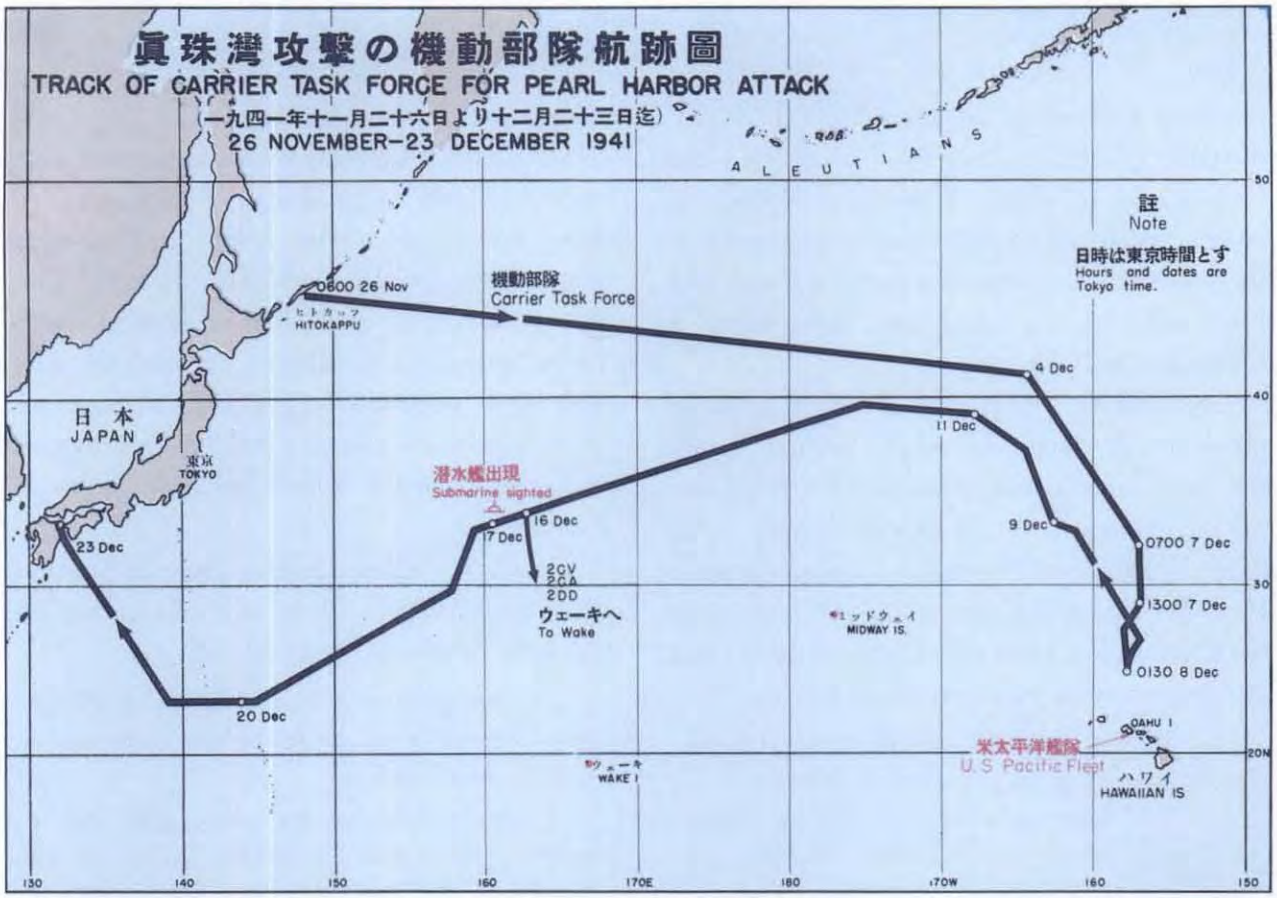
27 Part VIII of the Combined Fleet Top Secret Operations Order No. 1 outlined Second Phase Operations to begin after the capture of the Netherlands East Indies, specifying the following areas "to be occupied or destroyed as speedily as operational conditions permit": (1) Eastern New Guinea, New Britain, Fiji and Samoa; (2) Aleutians and Midway; (3) Andaman Islands; (4) Strategic points in the Australian area. Ibid., pp. 6, 9.

28 Full text of the Combined Fleet Top Secret Operations Order No. 2 read: "First preparations for war. Y-Day 8 December." Ibid., p. 55.

29 ATIS Research Report No. 131, op. cit., p. 77.

30 This directive was implemented by a Combined Fleet Operations Order dated 22 November, which stated: "In the event an agreement is reached in the negotiations with the United States, the Task Force will immediately return to Japan." Ibid.

31 Ibid., p. 78.



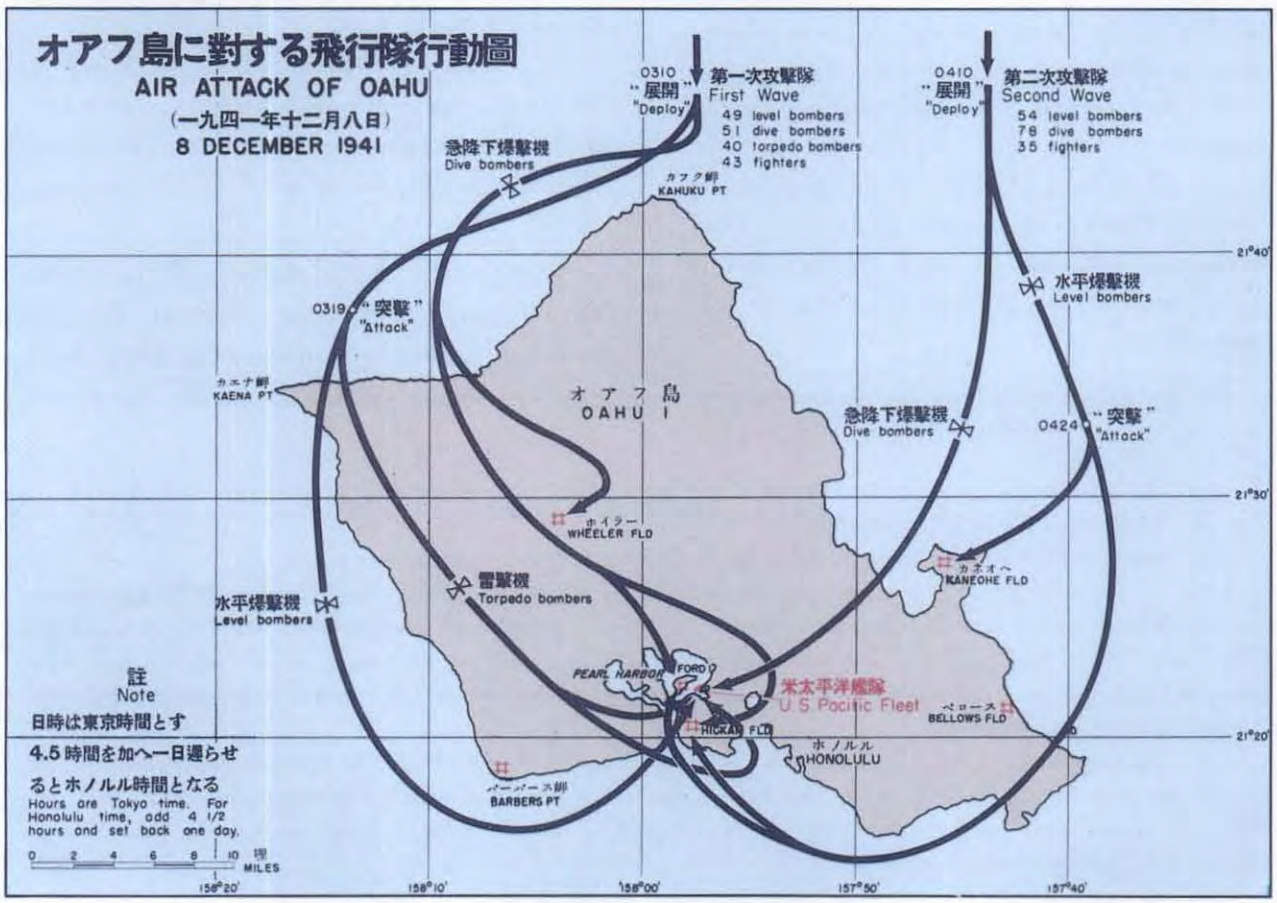


PLATE NO. 13

Pearl Harbor Attack, 8 December 1941

cupying and securing vital areas in the South.[32]

On 2 December Imperial General Headquarters Navy Directive No. 12 ordered the Commander-in-Chief, Combined Fleet, to launch operations on 8 December. In pursuance thereto Admiral Yamamoto issued a Combined Fleet order on the same day, designating 8 December as X-Day.[33]

Concurrently with these fleet orders, Imperial General Headquarters Army Section issued the basic orders and directives for Army invasion operations in the Southern area. An order issued on 6 November named General Hisaichi Terauchi Commander-in-Chief of the Southern Army, fixed the order of battle,[34] and directed invasion preparations as follows:

1. Imperial General Headquarters has prepared for the invasion of strategic areas in the South.

2. The Commander-in-Chief, Southern Army, shall, in cooperation with the Navy, concentrate his main forces in Indo-China, South China, Formosa, and the Ryukyu Islands and shall carry out preparations for the invasion of the strategic southern areas. The start of the invasion operations will be by separate order.

3. In the event of attack by American, British and Dutch forces, either together or singly, the Commander-in-Chief, Southern Army, is authorized to counterattack with the forces at his disposal in self-defense.[35]

The general plan of joint Army-Navy operations and definition of respective spheres of responsibility were laid down in a Army-Navy Central Agreement concluded in Tokyo between 8 and 10 November by General Terauchi, for the Southern Army, and Admiral Yamamoto, for the Combined Fleet.[36] This was implemented by a series of detailed operational agreements concluded between the fleet and Army commanders assigned to operations in each invasion area at a joint staff conference at Iwakuni, on the Inland Sea, from 14 to 16 November.[37]

On 15 November a further Imperial General Headquarters Army Order to the Commander-in-Chief, Southern Army, stated:

1. Strategic areas to be occupied are the Philippines, British Malaya, the Netherlands Indies, and a part of southern Burma.

2. In executing these operations, effort will be made to preserve order and stability in Thailand and Indo-China; and from these areas the blockade of China will be reinforced.

3. Military government will be established in occupied territories in order to assure the restoration of order, the acquisition of vital resources for national defense, and the self-sufficiency of the occupying forces.[38]

Acting under this directive and the Army-Navy Central Agreement, General Terauchi issued implementing orders to the forces under Southern Army command on 20 November,

32 Ibid., p. 76.

33 Ibid., p. 78.

34 Order of battle as given on pp. 60–3.

35 Imperial General Headquarters Army High Command Record, op. cit., p. 24.

36 The agreement fixed the areas to be occupied as the Philippines, Guam, Hongkong, British Malaya, Burma, the Bismarcks, Java, Sumatra, Borneo, the Celebes, and Timor. Initial attack plans followed the lines of Combined Fleet Order No. 1, and Army and Navy strength was allotted as already outlined on pp. 60–2. *Nampo Sakusen Chuo Kyotei* 南方作戰中央協定 (Army-Navy Central Agreement, Southern Operations) Japanese Government Demobilization Bureaus, Nov 45. pp. 4–11.

37 Four agreements were concluded, as follows: (1) 2d Fleet-14th Army; (2) 2d Fleet-16th Army; (3) 4th Fleet-South Seas Detachment; (4) 11th Air Fleet-5th Army Air Force. A fifth operational agreement covering the Malaya invasion was reached at Saigon in the middle of November between the 25th Army, the Southern Expeditionary Fleet and the 3d Air Group.

38 Imperial General Headquarters High Command Record, op. cit., pp. 25–6.

allocating the Fourteenth Army (Lt. Gen. Masaharu Homma) to the invasion of the Philippines, the Twenty-fifth Army (General Tomoyuki Yamashita) to the invasion of Malaya, the Fifteenth Army (Lt. Gen. Shojiro Iida) to the occupation of Thailand and operations in Burma, and the Kawaguchi Detachment (main strength composed of one infantry regiment of the 18th Division, temporarily detached from Twenty-fifth Army, under command of Maj. Gen. Seiken Kawaguchi) to the invasion of British Borneo. The 5th Army Air Group was placed under Fourteenth Army command for the Philippines operations, and the 3d Army Air Group was assigned principally to support of the Malaya invasion.[39]

The date for the launching of hostilities was finally fixed by an Imperial General Headquarters Army order issued to the Commander-in-Chief, Southern Army, on 1 December, which stated :

1. The Empire of Japan has resolved to wage war against the United States, Great Britain and the Netherlands.

2. The Commander-in-Chief, Southern Army, will begin invasion operations on 8 December. However, if a Japanese-American agreement should be reached before that date, the operations will be cancelled.

3. Prior to 8 December, the Commander-in-Chief, Southern Army, is authorized :

a. In the event the enemy takes the initiative in launching a serious attack, to begin invasion operations at an opportune moment, in cooperation with the Navy.

b. In the event of a British invasion of Thailand, to occupy that area at an opportune moment in cooperation with the Navy.

c. In the event enemy aircraft repeatedly reconnoiter our strategic bases or troop convoys, to order that they be shot down.[40]

General Terauchi left Tokyo by air on 25 November and reached Saigon on 5 December, three days before the scheduled start of hostilities. There he set up the General Headquarters of the Southern Army.

Pearl Harbor Operation

By 22 November the 32 warships comprising the Carrier Task Force under command of Vice Adm. Chuichi Nagumo (Commander-in-Chief First Air Fleet) had concentrated at the assembly point in Tankan Bay, where final battle preparations were completed. Task Force Top Secret Operations Order No. 1, laying down the plan of attack, was issued on 23 November.[41]

The eastward movement of the Task Force began at 0600 on 26 November. In order to escape detection while en route, the Force maintained strict radio silence and took a northerly course well off commercial shipping lanes and beyond the range of patrol planes from American island bases.[42] A destroyer screen moved ahead of the main force in order to give advance warning if unfriendly vessels were encountered. Whenever weather conditions were favorable, refueling was carried out from supply train tankers.[43]

---

39 Southern Army Operations Record, op. cit., p. 12.

40 Imperial General Headquarters High Command Record, op. cit., pp. 74–5.

41 ATIS Research Report No. 131. op. cit., pp. 78–82.

42 *Dai Toa Senso Senkun (Koku—Hawaii Kaisen)* 大東亞戰爭戰訓 (航空—ハワイ海戰) (Battle Lessons of the Greater East Asia War—Air, Hawaii Operation) Navy Battle Lessons Analysis Committee, Air Section, Aug 42, Vol. I, pp. 4–5.

43 Had refueling at sea been impossible due to rough weather, it was planned that the destroyer screen would separate from the Task Force and return. The cruising range of other Task Force units, which normally could not have operated beyond 160 degrees West, was extended by loading extra drums of heavy oil on deck and in empty spaces below decks. ATIS Research Report No. 131, op. cit., p. 67.

At 0400 4 December, the Task Force altered its course to the southeast and proceeded until 0700 on X-1 Day, 7 December, when it headed due south and began the final run toward Oahu at a speed of 24 knots. (Plate No. 13) At 0130 on 8 December, from a point approximately 200 nautical miles north of Oahu, the First Attack Unit of 183 planes took off from the decks of the six carriers, formed over the Task Force, and at 0145 headed for Pearl Harbor.[44]

Flying at 3,000 feet over dense but broken cloud formations, the first wave sighted the northern shoreline of Oahu at 0310 and immediately deployed, receiving the order to " attack " at 0319 (0749 Hawaii time). Dive bomber groups spearheaded the attack with swift strikes at Wheeler, Hickam and Ford Island airfields, crippling enemy fighter strength before it had a chance to get off the ground. Immediately thereafter torpedo plane and level bomber groups converged on the fleet anchorage at Ford Island and attacked the heavy units lying at berth.

The second wave of 167 planes took off from the carriers at 0245, reaching offshore the eastern coast of Oahu at 0424 (0854 Hawaii time), when the " attack " order was given. Dive and level bombers again swept in on the fleet anchorage, striking at ships not severely hit in the first attack. Fighter groups went in as escorts with both first and second waves, and when enemy air opposition failed to develop, they strafed ground targets. Both attacks continued from thirty minutes to one hour.

By 0830 (1300 Hawaii time) all aircraft, except nine missing from the first wave and 20 from the second, had returned to the carriers, and the Task Force began its withdrawal to the northwest at full speed. On 16 December the carriers *Soryu* and *Hiryu* (2d Carrier Division) and cruisers *Tone* and *Chikuma* (8th Squadron) broke off from the Task Force to take part in softening-up air attacks against Wake. The rest of the force continued toward home bases, arriving in the Inland Sea on 23 December.

On the basis of photographic analysis and reports by flight personnel, the Navy estimated the results of the Pearl Harbor air strike as follows : Sunk—four battleships, one cruiser, two tankers ; heavily damaged—four battleships ; lightly damaged—one battleship. Approximately 248 planes were estimated destroyed on the ground, 17 shot down in the air, and possibly 230 destroyed in hangars.[45]

Coordinated with the air strike were simultaneous attacks by the Advance (Submarine) Force, under command of Vice Adm. Shimizu. This Force, consisting of 27 of the Navy's best submarines, had left its bases in Japan and Kwajalein, in the Marshalls, between 16 and 24 November, and by X-1 Day had taken up positions controlling the entrance to Pearl Harbor. Its missions were to observe enemy fleet movements prior to the Task Force attack, to carry out torpedo attacks (with A-Target midget submarines)[46] simultaneously with the

---

44 Battle Lessons of the Greater East Asia War, op. cit., p. 49.

45 (1) Ibid., pp. 58–9. (2) An Imperial General Headquarters Navy Information Bureau communique issued at 1300 18 December announced the results as : " Sunk—5 battleships, 2 A or B-Class cruisers ; heavily damaged—3 battleships, 2 light cruisers, 2 destroyers ; medium or light damage—1 battleship, 4 B-Class cruisers. 450 enemy planes destroyed by bombing and strafing ; 14 shot down." ATIS Research Report No. 132, *The Pearl Harbor Operation*, 1 Dec 45, p. 17.

46 These craft were carried aboard long-range "mother" submarines fitted with a mechanism for releasing them in the zone of operations. Mechanical improvements and training of the crews were completed barely in time to permit their employment in the Pearl Harbor operation.

Pearl Harbor on 8 December 1941 (Tokyo Time)

air strike, to attack any enemy ships trying to put to sea, and to watch the movements of surviving enemy warcraft after the Task Force withdrawal.[47]

Between 2012 and 2303 on 7 December, several hours in advance of the air strike, five midget submarines were released from their "mother" submarines at positions from five to twelve nautical miles from Pearl Harbor and, aided by moonlight, gradually made their way toward the harbor entrance. Since radio communication was then discontinued, exact knowledge of their actions was lacking, but it was believed on the basis of offshore observation and later radio reports that at least three of the craft had successfully penetrated into the harbor. A heavy explosion witnessed at 1631 8 December was believed to indicate that a large warship had been sunk or severely damaged, presumably by midget submarine action.[48]

Although rescue submarines remained off Oahu for several days to pick up any of the midget craft which might have survived the attack, none returned.[49] Until early January part of the Advance Force continued to operate in the vicinity of Hawaii, largely to observe fleet activity and interfere with the anticipated transport of reinforcements to the Far Eastern zone of operations. Most of these submarines, at different times, proceeded to the west coast of the United States to attack shipping.[50]

South Seas and Southern Operations[51]

While Vice Admiral Nagumo's Task Force temporarily crippled the United States Pacific Fleet at Pearl Harbor, Japanese forces in the South Seas area and Southeast Asia began operations in execution of other phases of the over-all war plan. (Plate No. 15)

The Navy's South Seas Force, charged with operations in the general area of the Japanese mandated islands, began air attacks on 8 December to knock out American air bases on Guam, Wake, and Howland Islands. On 10 December troops of the Army's South Seas Detachment, with the naval support of the South Seas Force, effected surprise landings on the northwestern and eastern shores of Guam before dawn and occupied the island without serious resistance.[52] This eliminated the isolated enemy base in the heart of the Japanese mandated islands.

At Wake, following repeated attacks by Navy planes based in the Marshalls, 1,000 special naval landing troops attempted a dawn landing on 10 December but were forced to withdraw due to effective air attack by remaining American planes and heavy seas. Following the arrival of the aircraft carriers *Soryu* and *Hiryu*, diverted from the Task Force returning from Hawaii, and 500 additional naval landing troops, a successful landing was accomplished during the night of 22–23 December, and the

47 ATIS Limited Distribution Translation No. 39 (Part VIII). op. cit., p. 44.

48 ATIS Research Report No. 131, op. cit., pp. 71–2.

49 One of the midget submarines which failed to penetrate into the harbor attacked small enemy craft on 8 December until it was finally disabled. One of its two crew members, Ensign Sakamaki, was taken prisoner and was the only survivor.

50 ATIS Research Report No. 131, op. cit., p. 74.

51 Excluding the Philippines, covered in Chapter VI.

52 The Guam invasion force (South Seas Detachment) sailed from Haha-Jima, in the Bonins, on 4 December. *Kaigum Nanyo Butai Sakusen no Gaiyo narabini Butai Shisetsu no Ippan Jokyo* 海軍南洋部隊作戦の概要並に部隊施設の一般狀況 (Outline of South Seas Naval Force Operations and General Situation of Facilities) 2d Demobilization Bureau, Jul 49, p. 3.

island was completely occupied the following day.[53]

In the Gilbert Islands, naval landing parties occupied Makin and Tarawa on 10 December and immediately constructed an advance air base on Makin. The capture of these islands and of Wake, enabling their utilization as air bases, strengthened the Navy's strategic outer defense line against American counterattack from the Central Pacific.

In the principal theater of operations in Southeast Asia, the Japanese forces struck swiftly at the strategic center of British strength in Malaya. The advance invasion units of the Twenty-fifth Army (main strength of the 5th Division and elements of the 18th Division) embarked from Hainan Island on 4 December. Early on 8 December[54] these forces, supported by the main strength of the Navy's Malaya Force and under air cover provided by the 3d Army Air Group, began landing operations at Singora and Pattani, in southern Thailand, and Kota Bharu, in northern Malaya. The Kota Bharu force, severely attacked by British planes after it landed on the beach, temporarily withdrew but, with reinforced air cover, succeeded in a second landing later the same day.[55]

Concurrently with the landing operations, land-based bombers of the 22d Naval Air Flotilla flew from Indo-China bases at 0500 on 8 December to bomb enemy military installations at Singapore. Two days later, on 10 December, Navy torpedo planes and bombers crippled the British Far Eastern Fleet by sinking the powerful battleships *Prince of Wales* and *Repulse* and a destroyer in the waters east of Malaya.[56]

With the occupation of Singora, Pattani and Kota Bharu, Army Air units immediately began operating from these advance bases, gained mastery of the air over Malaya and provided direct support for the ground forces advancing on Singapore. The Twenty-fifth Army's drive progressed smoothly despite sporadic enemy resistance, and by late January 1942, all units had reached the Johore Straits at the southern tip of Malaya. Singapore fell on 15 February.[57]

To the north, the Imperial Guards Division (temporarily attached to the Fifteenth Army) moved across the Indo-Chinese border into Thailand on 8 December, while some of its elements landed by sea at points along the Kra Isthmus. These operations were accomplished without resistance. In January, the main strength of the Fifteenth Army (55th and 33d Divisions) concentrated at Rahaeng and Bangkok in preparation for the invasion of Burma.[58]

In the Borneo and Celebes area, Japanese operations likewise proceeded according to plan. Embarking at Camranh Bay, French Indo-China, on 13 December, the Kawaguchi Detachment (three infantry battalions plus Yoko-
